

RESPONSIBLE CONDUCT OF RESEARCH CONFERENCE

The Importance of Integrity to Research Success

March 19 - 20, 2019

Royal University for Women, Bahrain

Investment in science has long been the key to humanity's well-being and economic growth, with scientists often seen as more trustworthy than other public figures. Yet, are scientists meaningfully aware of their stature in the global public's consciousness, or of their need to maintain the trust with which they are regarded? The worldwide rise in research misconduct cases suggests not, much to the detriment of science if not dealt with.

Responsible Conduct of Research (RCR) is a two day conference that reviews the nine core areas of an effective RCR program and outlines procedures for their successful implementation. The program will consist of lectures, questions and answers, discussions, case studies, and students' participation in all aspects of the course including providing analysis and participating in the ethical decision making process.

RCR is critical for excellence, as well as public trust, in science and engineering. Consequently, education in RCR is considered essential in the preparation of future scientists, healthcare providers associated with research, and engineers.

EDUCATIONAL OBJECTIVES

-  Following this course, participants should be able to:
-  Describe the evolution of responsible conduct of research standards and outreach efforts over the last half century
-  Explain the fundamental importance of the principles of research integrity to the perceptions, aspirations, and safety of the global general public
-  Review and discuss the social contract between the global general public and the professional community of science
-  Review and discuss the most recent developments in biomedical research integrity policies and processes and the significance of recently published research integrity studies
-  Discuss the impact of misconduct on the practice of research within the scientific community
-  Recognize the significance of mentoring in promoting the education and training of science professionals and identify the characteristics of the mentor-trainee relationship
-  Define research misconduct and fabrication, falsification, and plagiarism and develop techniques to resolve professional problems before they might lead to allegations of misconduct
-  Recognize the importance of responsible authorship and understand some of the ways to deal with controversies or conflicts that might arise in authorship or peer review
-  Define and describe specific types and levels of conflicts of interest and discuss strategies for managing conflicts of interest
-  Understand and explain the importance of data integrity to the research process and describe methods of responsible collection, selection, and analysis of data
-  Understand the institutional processes involved in collaborative research, identify the pitfalls that may occur in collaborative research, and gain familiarity with ways to enhance good collaborative research
