

CFOP ($C_{\text{ross}}/F_{2L}/O_{LL}/P_{LL}$)

LBL (Layer By Layer)

Difficulty

Center-piece

2-color-piece

3-color-piece

STEP1: White cross

Difficult

STEP2: Good white cross

Difficult

STEP3: Good white face

Extremely Difficult

STEP4: Bottom two layers

Extremely Difficult

STEP5: Yellow cross

Easy

STEP6: Yellow face

Easy

STEP7: Top layer corner

Easy

STEP8: Finishing

Easy

STEP1: White cross

- Build a white cross at this step. Not need to care the 3-color-pieces (corner)
- Hold the cube so that WHITE center-piece faces upward.

① **LUCKY** if the bottom has WHITE 2-color pieces. Turn 180°

② If WHITE 2-color-piece is in middle layer, firstly, turn middle layer and move up to make a shoulder of white cross.

③ **UNLUCKY** if the top layer or bottom layer has WHITE 2-color-piece. Turn it 90° to change the state to ② above

STEP2: Good white cross

- WHITE center-piece must face upward, again.
 - ① Find a face where top layer 2-color piece and middle layer center-piece do not correspond

Not correspond

Correspond

FRONT

- ② Keep holding the cube as shown right until STEP2 ends. (FRONT and top two layers can be turned)

- ③ Turn FRONT 180° (**Up-side-down**)

Until good white cross

- ④ Turn middle and top layers together so that base layer matches center color (**MATCH**)

[NOTE]

- During the repetition of ③ and ④, white cross is deformed.
- During the repetition of ③ and ④, do not move the finger of ②.

STEP3: Good white face

- WHITE center-piece must face upward, again.

- Find WHITE 3-color-piece in Base layer
- Turn base layer so that the found WHITE 3-color-piece of ① is **placed between** the SAME colored center-pieces

- Based on the state of WHITE face of 3-color-piece, conduct one of the algorithm below.

(1) **Right base** (WHITE faces you)

(2) **Left base** (WHITE faces you)

(3) **Right bottom** (WHITE faces downward)

NG!

[Exception] As seen in the left figure, in case a 3-color-piece is orientation-wrongly placed in top layer and no WHITE 3-color-piece exists in base layer, move any of NON-WHITE 3-color-piece to the place and kick away the WHITE 3-color-piece to base layer.

STEP4: Bottom two layers

- Turn whole cube 180° so that YELLOW center-piece faces upwards
 - Find NON-YELLOW 2-color-piece in top layer.
 - Turn top layer so that the found color corresponds to the color of center-piece (Make **up-side-down T** shape)

OK!

NG!

- Compare the color upward of the corresponding 2-color-piece and the center-pieces of left/right face.

Color upward corresponds to **RIGHT** center-piece

Color upward corresponds to **LEFT** center-piece

NG!

[EXCEPTION] In case 2-color-piece is orientation-wrongly placed in middle layer and no NON-YELLOW 2-color-piece exists in top layer, move any of YELLOW 2-color-piece to the place and kick away the orientation-wrongly placed piece by using the algorithm above.

STEP5: Yellow cross

- Hold the cube so that YELLOW center-piece faces upward

① Identify the YELLOW pattern at the top face (Hold correctly in the case of L-shape or Lucky I-shape)

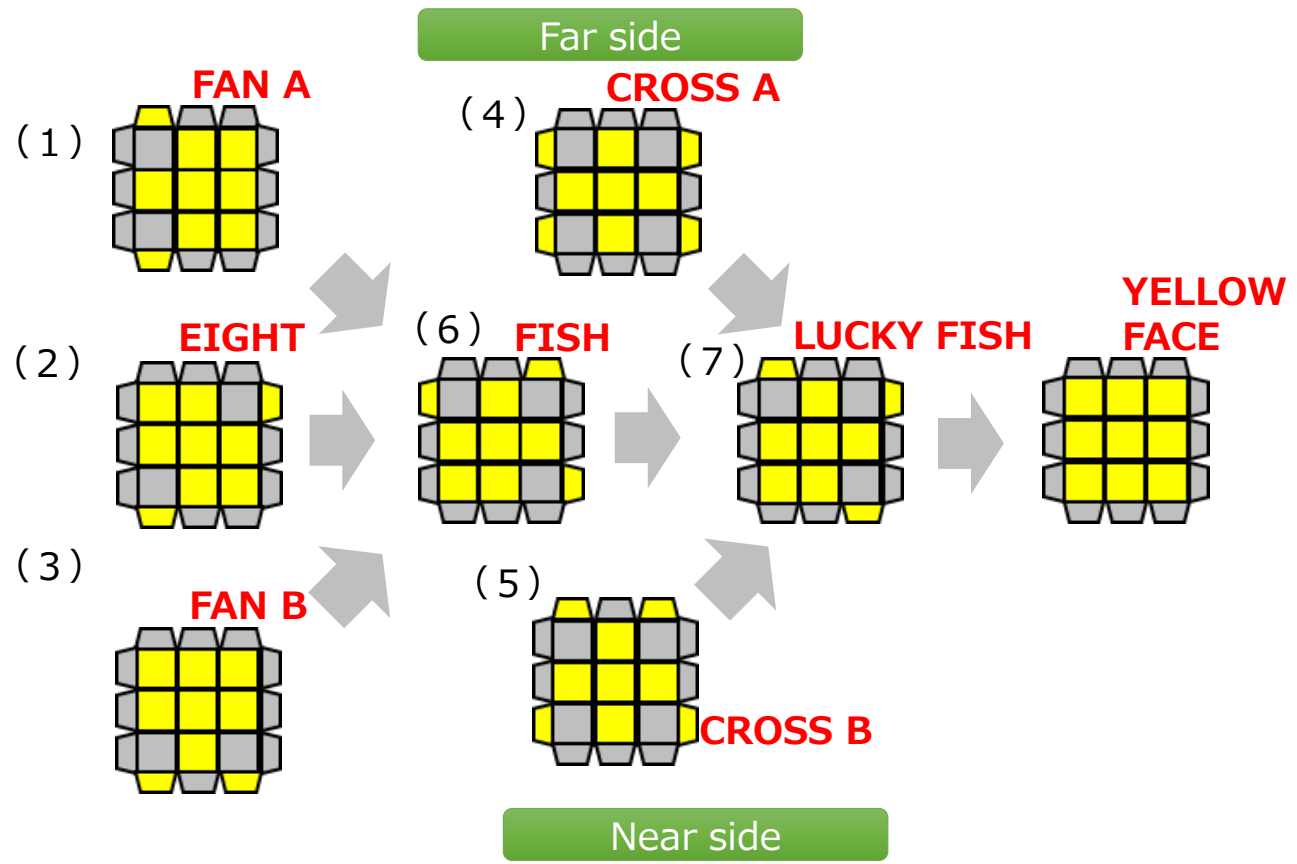

① Repeat algorithm below until Yellow cross appears

STEP6: Yellow face

- Hold the cube so that YELLOW center-piece faces upward
- ① Identify the YELLOW pattern at the top face (Confirm color at sides, too)

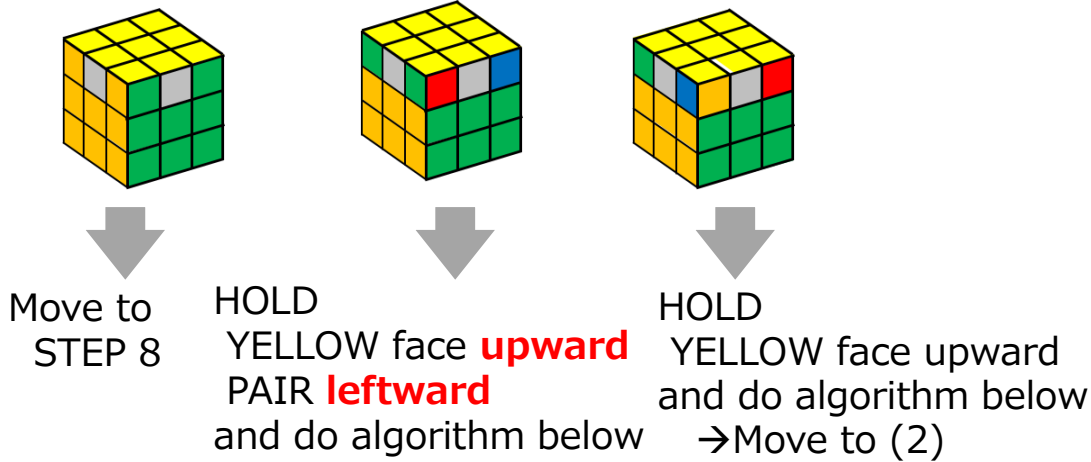

- ② Repeat the algorithm below until YELLOW FACE appears

STEP7: Top Layer Corner

① Count the number of pairs at the YELLOW corners

(1) Four PAIRS (2) One PAIR (3) Zero PAIR

STEP8: Finishing

① Count the number of completed faces

(1) 6 faces OK

COMPLETE!

(2) 3 faces NG

HOLD
YELLOW face **upward**
OK face **farside**
and do algorithm below
(Repeat, if not complete)

(3) 4 faces NG

HOLD
YELLOW face **upward**
and do algorithm below
→ Move to (2)

Unlucky case in STEP 3

【OK】完全一面

アンラッキー 1

白の向きが違う (A)

※底面に白い部品がない

アンラッキー 2

側面の色が違う (B)

※底面に白い部品がない

側面の色が違う (C)

(A)又は(B)の時

(1) 右下 (白は手前を向いている)

(2) 左下 (白は手前を向いている)

(C)の時

白い部品が底面に移動

Unlucky case in STEP 4

【OK】下二段

アンラッキー 3

※上面をいくら回しても逆Tが作れない状態

向きが違う (D)

アンラッキー 4

違う位置にハマる【右】 (F)

違う位置にハマる【左】 (E)

(D)又は(F)の時

上面の色と右の中心部品の色と同じ場合

上面の色と左の中心部品の色と同じ場合

(E)の時

逆Tを作る部品が上面へ

note 1

“Never finished state (called parity)” could be happened after re-constructing the removed parts of cube. In this case, the best solution to fix this problem is to disassemble the all parts of cube and re-construct it

Orientation of 3-color-part is wrong

Positions of 2-color-part are switched

note 2

Do not bring your cube to your school, unless your teacher allows you to do so.

A little introduction of intermediate techniques...

STEP5

Intermediate algorithm enable to skip one process of algorithm in STEP 5 (The difference is the first and last movement)

STEP1 and 2

After getting used to movement of Rubik's cube, try to skip STEP 1 (white cross) and complete STEP 2 (good white cross) directly. This is the best technique to reduce the amount of 6 face finishing time.
