Running SAP-based Service Provider BSS Stack on Cisco Datacenter Environment

Rajko Mihajlović, Verso

Agenda

About Verso and Altima

SAP Offer-to-Cash Solution Implementation

eTOM BSS Stack for Service Providers

Dimensioning

Performance tests on Cisco UCS

SAP HANA

Cisco SAP Alliance

We're doing the right things right!

CUSTOMER

is focused on its business vision, business goals and core competencies.

Altima and Verso are focused on design, development, implementation, maintenance and management of advanced ICT solutions that support customer's business model.

We continuously grow our sales, capabilities and geographical footprint

HQ in Croatia, 7 Country Offices

100+ Employees

120 Customers in 31 Countries

est. 40 mio. EUR Revenue in 2013

REVENUE AND EBITDA

YEARLY GROWTH

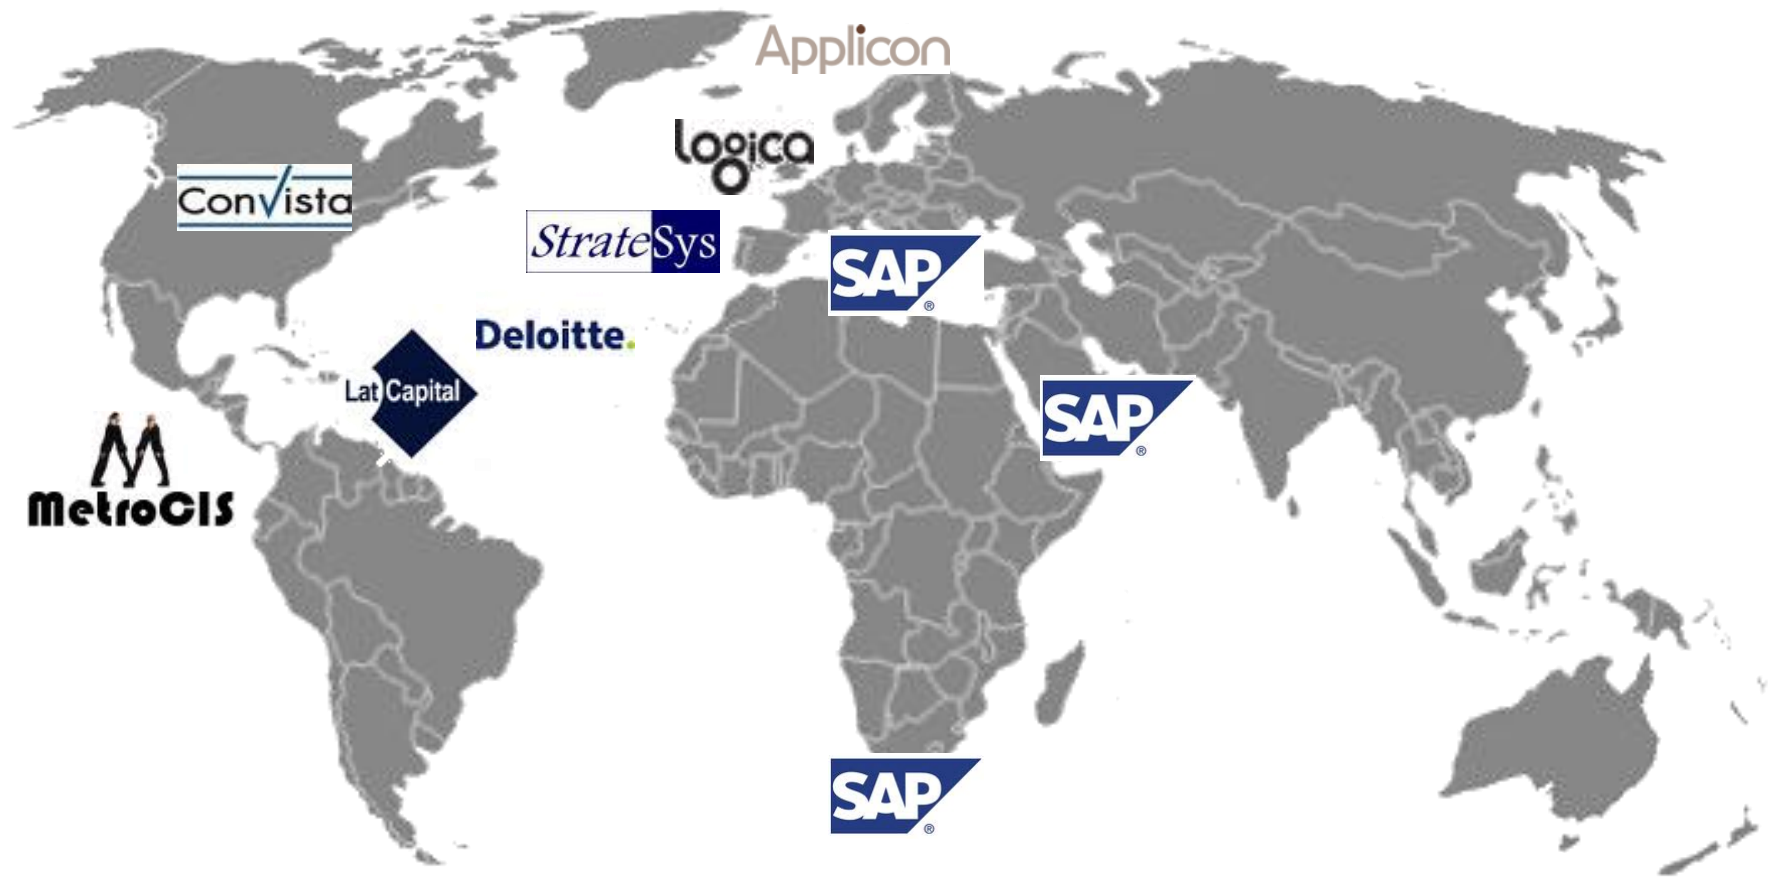

NUMBER OF EMPLOYEES

YEARLY GROWTH

Global Subcontractor Engagements for SAP Billing, Revenue and Innovation Management

Regional references of Altima/Verso deployments of SAP

1. ALBtelecom / Eagle Mobile (AL)

Altima implemented SAP BRIM 3.0 and CRM 7.0; ongoing project, some modules already in production, data migration ongoing.

2. IPKO Telecommunications (KS)

Altima implemented SAP CC 1.0 and our own CRM, mediation, provisioning, fraud, dunning...

3. Aneks / Blic.net (BiH)

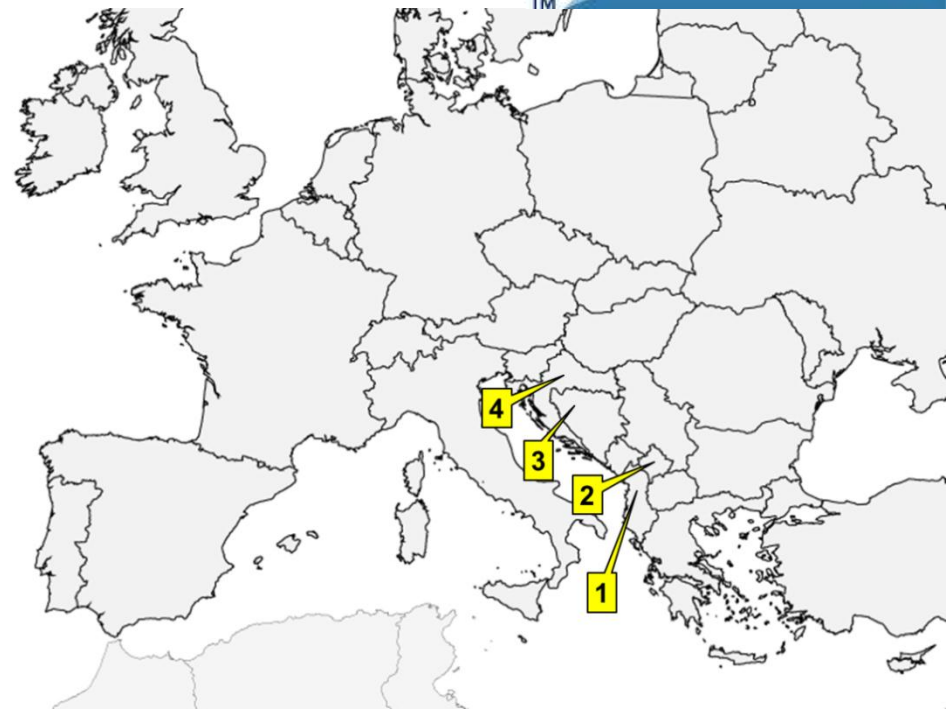

Implemented Highdeal, CRM, mediation, provisioning...

4. H1 Telecom (HR)

Implemented Highdeal billing for postpaid customers of triple-play operator.

5. Telekom Slovenije (SLO)

Convergent charging & billing. Project in progress.

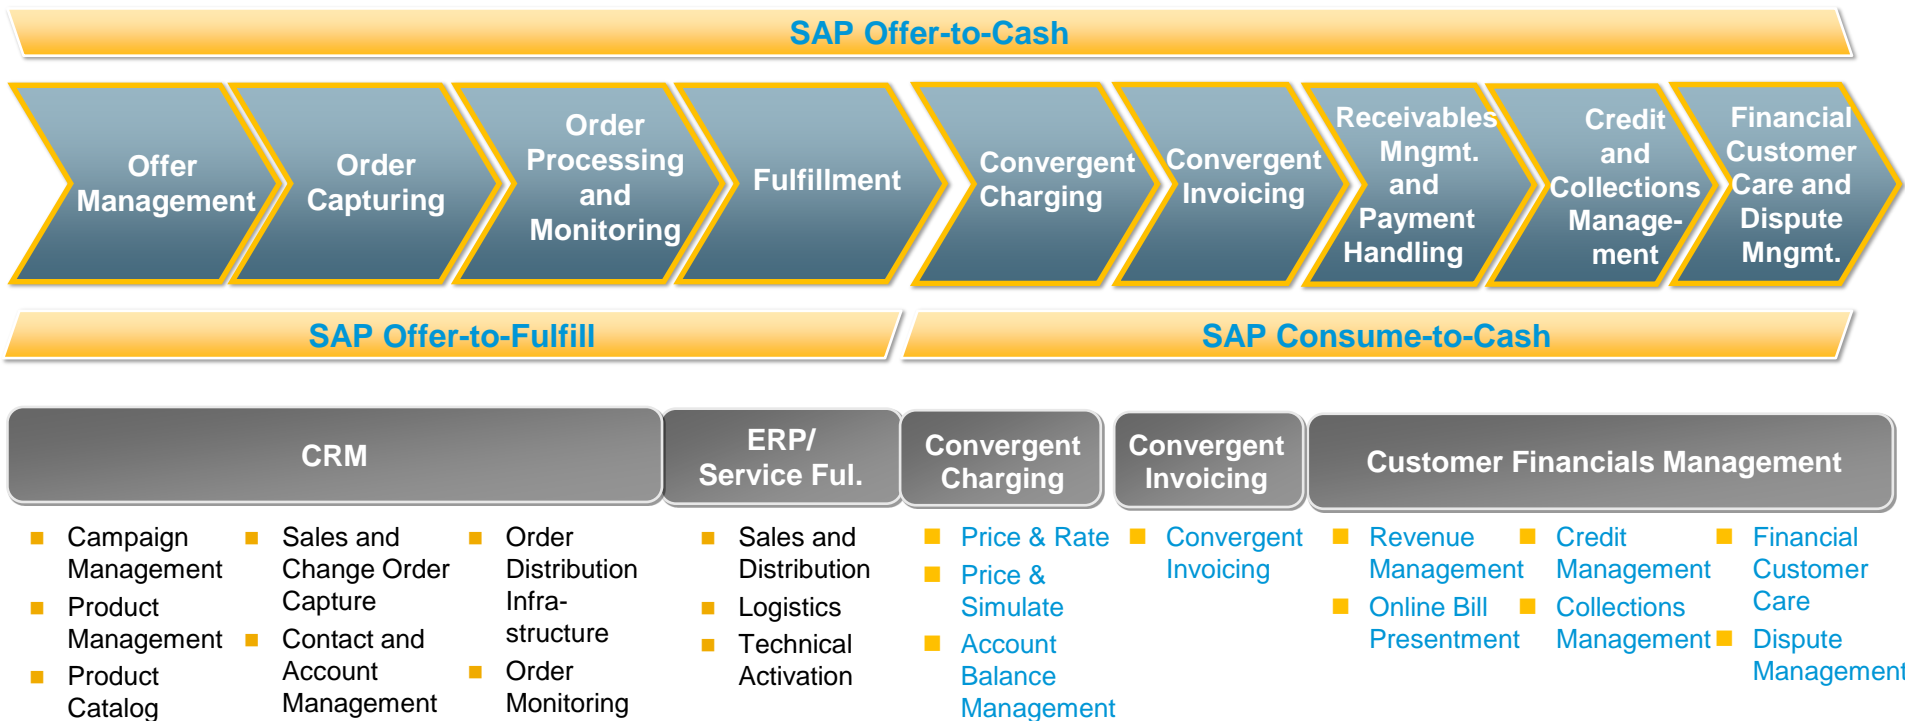

Implementing Solution Based on SAP Offer-to-Cash

Unique experience from global projects

Added value in ready-made product catalogue components

Mitigated risk and increased speed of implementation, integration and migration

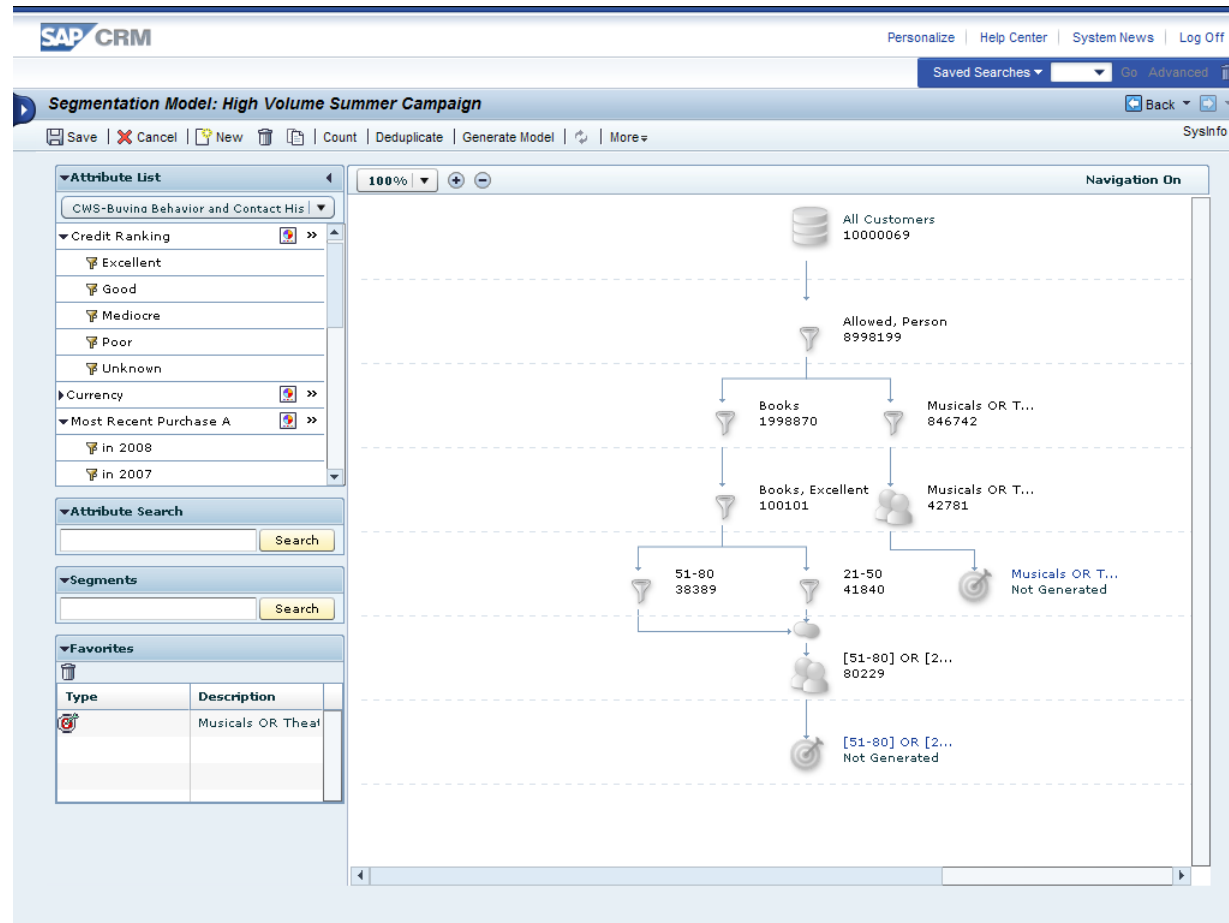

Marketing & Campaign Management

Enabling a holistic, disciplined approach to Marketing Planning

Campaign Planning
Customer Segmentation
Campaign Execution
Multichannel integration

- Cross Sell
- Up sell
- Down Sell

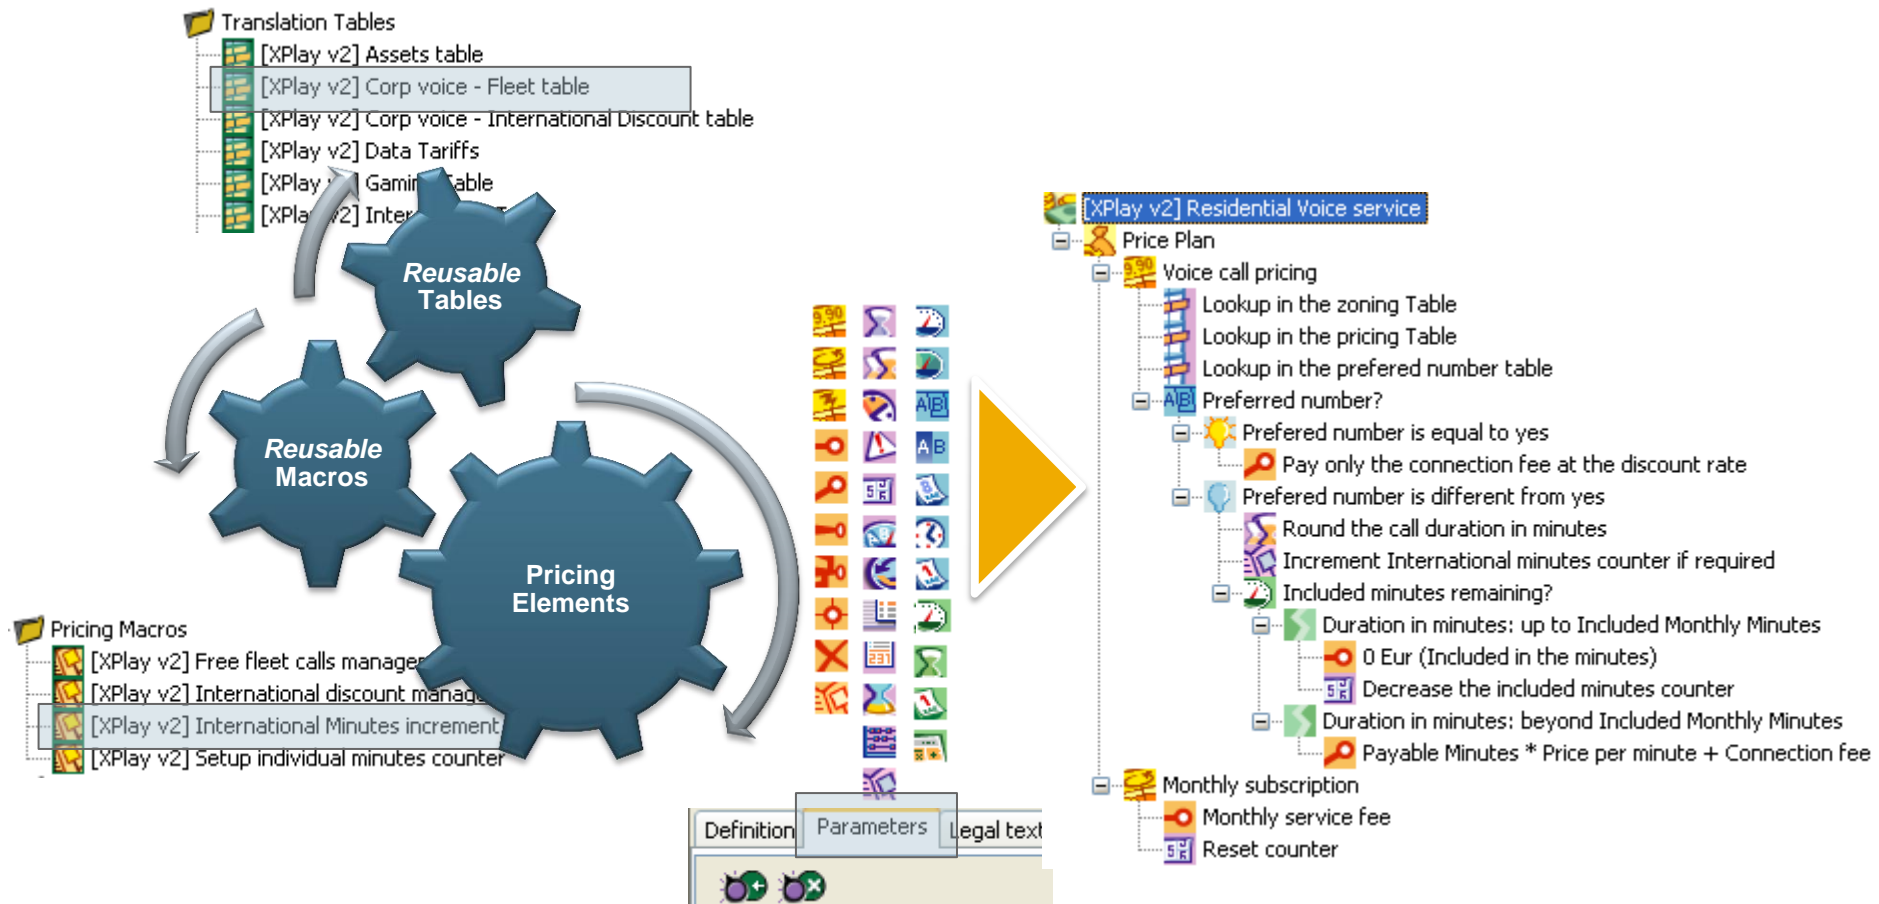

SAP CC Service Provider Product Catalogue

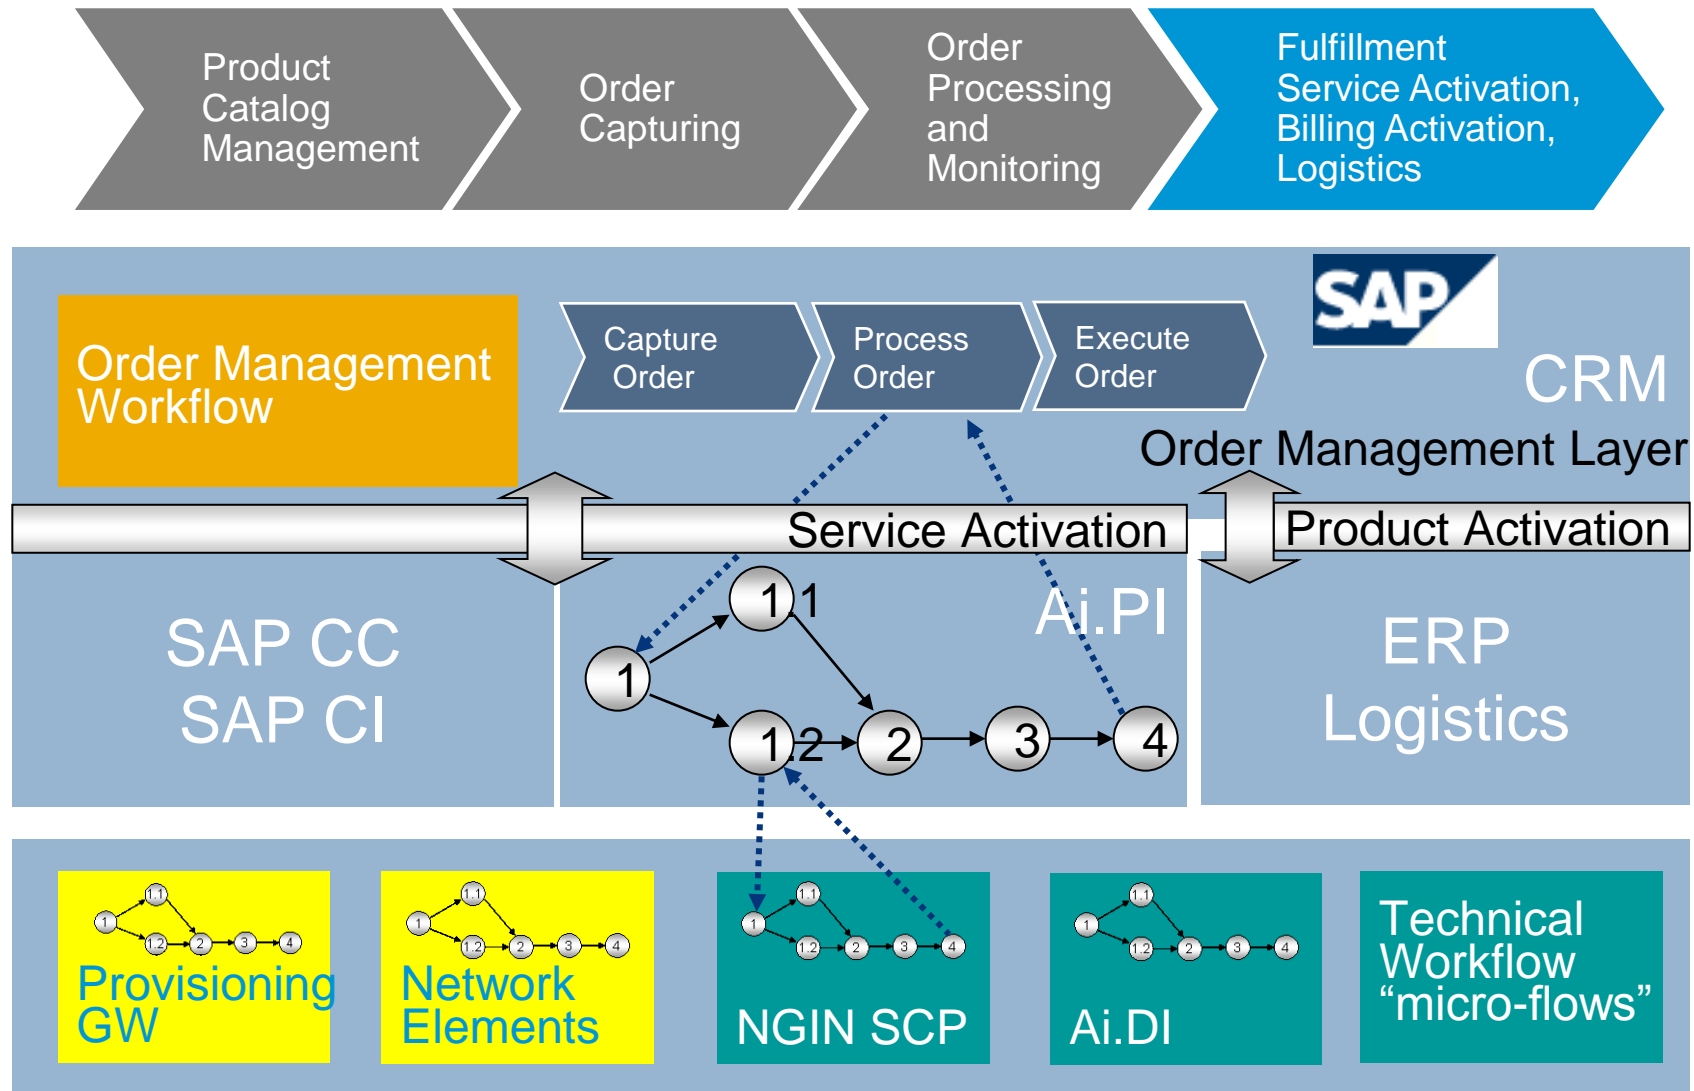

Framework for complex telco service catalogues

Incorporate all experience in catalogue development

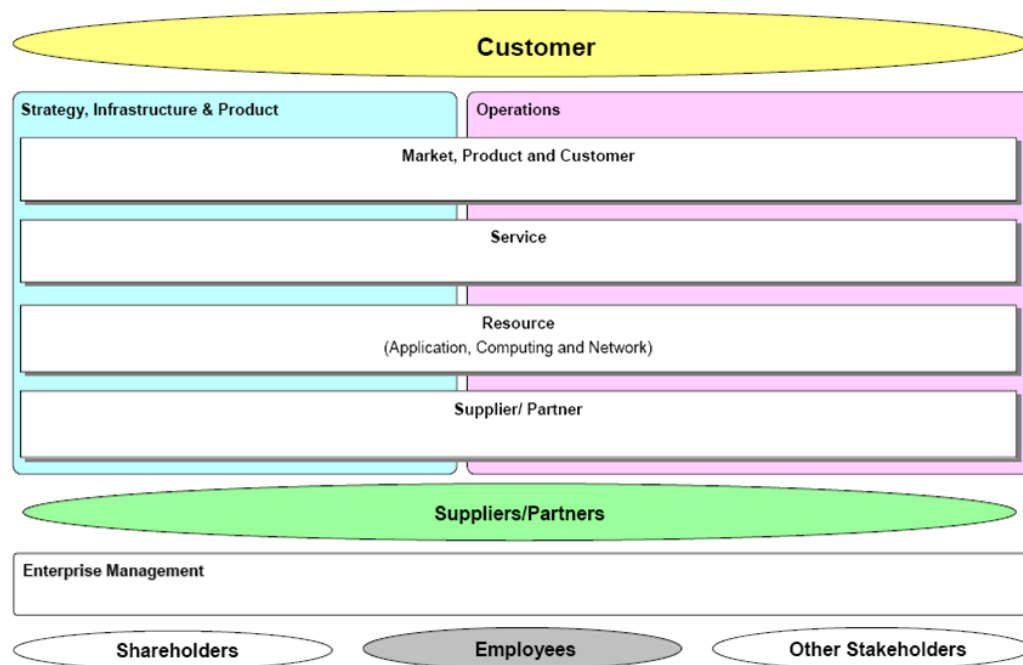

Enables faster deployment and implementation of complete catalogue

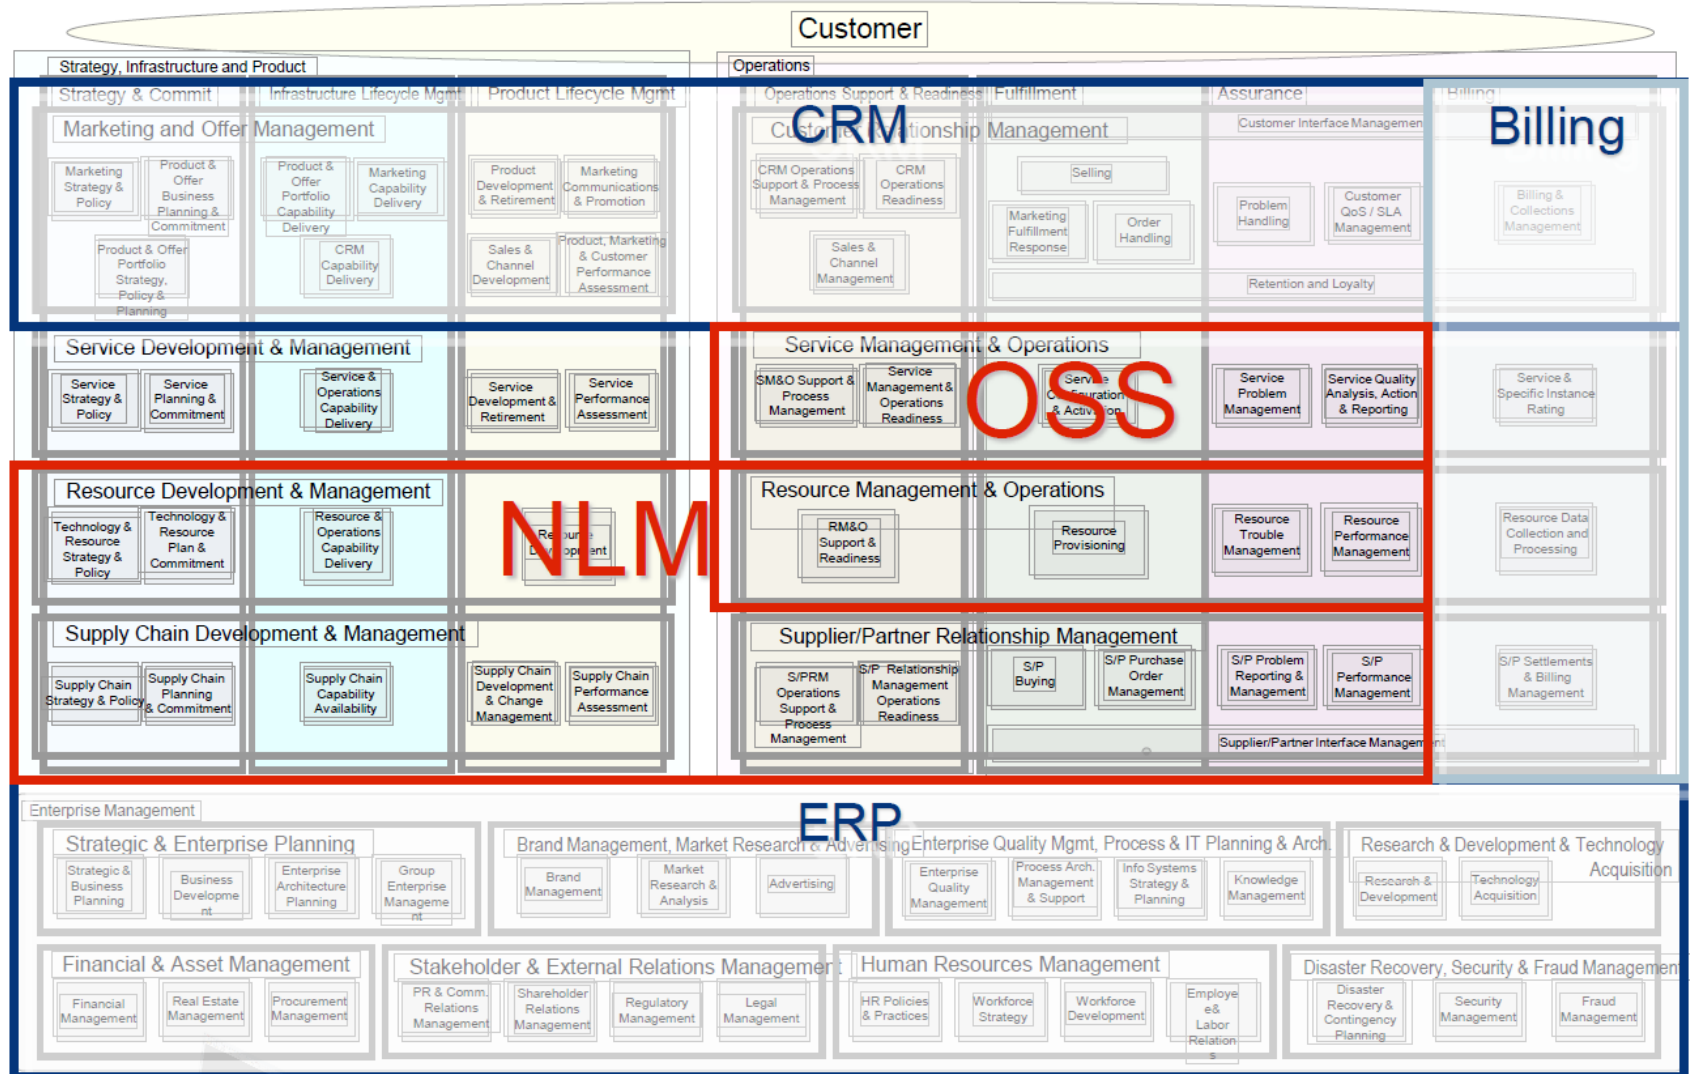

Service Activation – Fullfillment Integration

Service Provider's BSS Stack Alignment to eTOM Framework

SAP positioning on eTOM

Measuring Applications in SAPS

SAPS (SAP Application Performance Standard)

SAP Application Performance Standard (SAPS) is a hardware-independent unit of measurement that describes the performance of a system configuration in the SAP environment. It is derived from the Sales and Distribution (SD) benchmark, where 100 SAPS is defined as 2,000 fully business processed order line items per hour.

In technical terms, this throughput is achieved by processing 6,000 dialog steps (screen changes), 2,000 postings per hour in the SD Benchmark, or 2,400 SAP transactions.

In the SD benchmark, fully business processed means the full business process of an order line item: creating the order, creating a delivery note for the order, displaying the order, changing the delivery, posting a goods issue, listing orders, and creating an invoice.

S **A** **P** **S** Application performance standard

- Hardware-independent unit of measurement **SAPS** is derived from Sales & Distribution (SD) Standard Application Benchmark
- Machine capacity is 100 SAPS when with the definition of the SD Standard Application Benchmark it can fully business process 2000 order line items per hour.
- Today servers with 4 processors, 40 cores and 80 threads deliver an average SAPS value of around 75.000 SAPS.

2,000 fully processed
order line items/hour**

100 SAPS

** \triangleq 6,000 dialog steps or 2,400 SAP transactions

Input Assumptions – CRM Sales example

Table 1: Active Users - Standard Sizing

Clear		Insert					
	Element	A/P	TI	Low activity users	Medium activity users	High activity users	Short text
	ACT-USER	A	S				
	OPP-USER	A	S				
	SLS-USER	A	S	8	10	8	

Table 2: Throughput - Standard Sizing

Delete/Clear		Insert		1 line(s)									
	Element	A/P	TI	Objects *	Items *	% chg.	% dsp.	Mon. *	Arch.	S.t. *	E.t. *	ID	Short text

Reality - Information is Exploding within and around Communications Service Providers

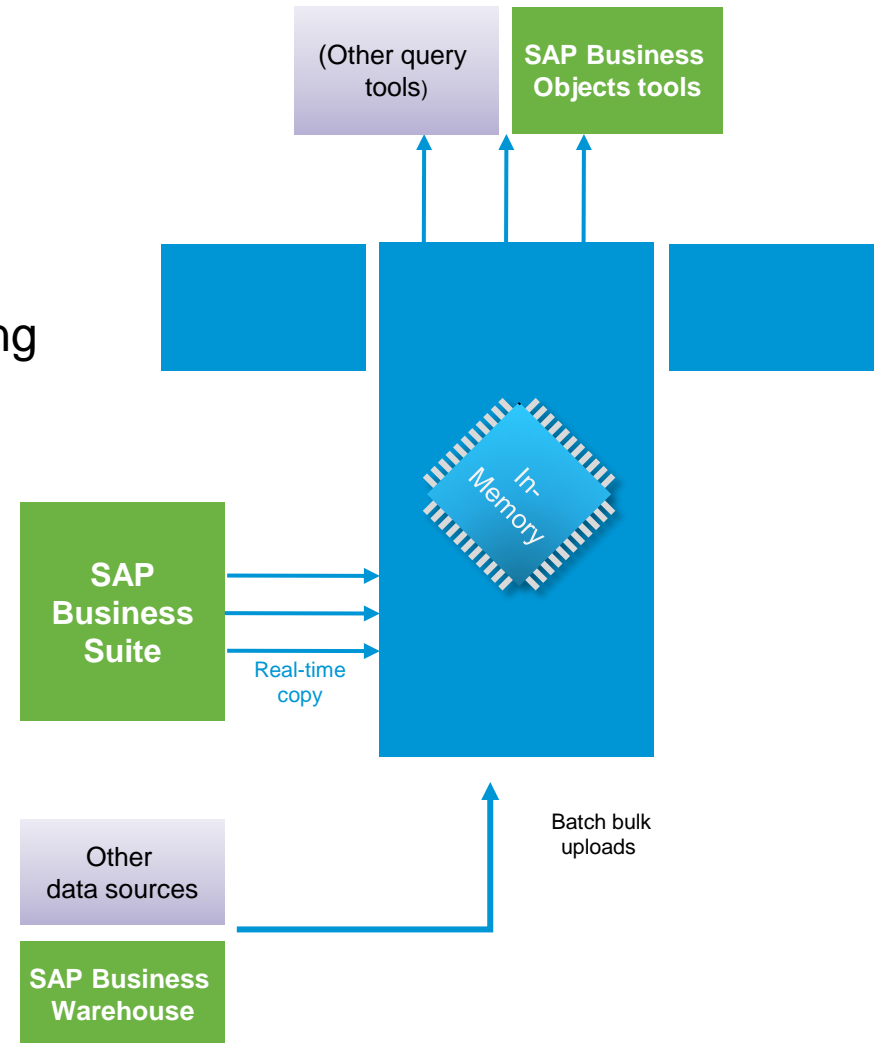

SAP HANA

modern platform for real 'real-time'

What is SAP HANA?

- SAP HANA™ is a **modern platform** that leverages the power of in-memory computing
- Enables to drive businesses in real-time on an ever increasing massive volume of data
- Can be deployed as an **appliance** or delivered via the **cloud**

SAP HANA for Telecommunications use cases

Sales & Marketing

Opportunity for the business	In-memory-enabled innovation/SAP HANA use cases	Capability enabled by
<ul style="list-style-type: none">Advanced insights to define, simulate and launch profitable new offers and bundles	Offer Pricing Simulation	Planned Standard
<ul style="list-style-type: none">Near real time information and analysis on new offer performances across all channels and geographies	Offer Performance Management	Custom or Future
<ul style="list-style-type: none">Optimal up-selling and cross-selling results through access to latest usage & consumption in real time/ near-real time	Customer Behavior Analytics	Planned Standard

SAP HANA at Service Provider

Offer Performance Management accelerated

Offers / Micro-offers

Proliferation of **targeted offers/micro-offers** to **21M customers** makes offer performance management increasingly strategic

Channels

Customers

Marketing operations team in need to **quickly analyze** offer uptake, discern patterns and refine offers

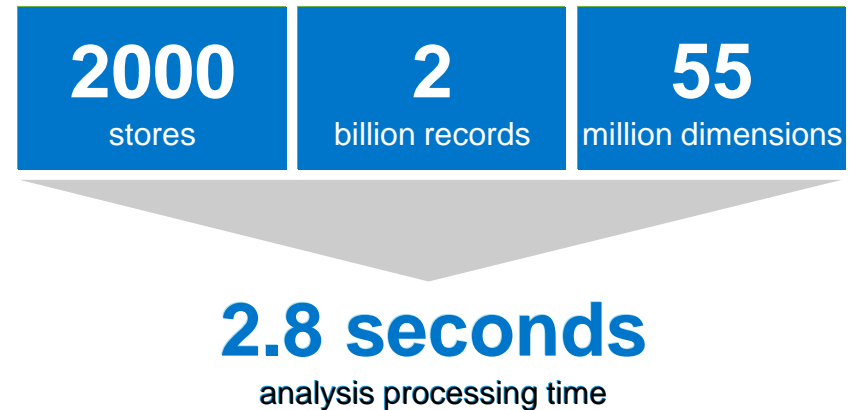

SAP HANA Deployment

Rapid insight with full detailed data for rich analysis

“50x improvement in the performance of analytics: **We can recalibrate offers in the market place in one day** that took a week using our existing solutions.”

SAP HANA in Action

Sample Query Performance in Telecommunications

Cisco SAP (HANA) A(p/I)liance

- Cisco's leadership in network intelligence
- SAP's leadership in vertical business transformation
- Cisco Unified Computing System with EMC Storage for SAP HANA - defined set of hardware and software that serves as an integrated infrastructure stack:
 - Cisco UCS High-performance Blade Servers
 - Cisco UCS Fabric Interconnect
 - Cisco Nexus 5000 Switches
 - EMC VNX5300 Storage
- with a single Cisco UCS platform, a SAP HANA appliance can be scaled to 48 computing nodes, with 24 TB of memory or 192 TB of uncompressed data

Thank you.
