September 2013

## Financial Statements

## NET WORTH SUMMARY

| January 2011 | $\$ 302,518$ |
| :--- | :--- |
| September 2012 | $\$ 375,821$ |
| September 2013 | $\$ 447,001$ |

## NET WORTH STATEMENT

John and Jane Doe
September 30, 2013

[^0]
B.E.S.T. Wealth Management, LLC

## OBJECTIVES

According to the information gathered in our previous meetings, your objectives are:

1. Maintain an adequate emergency fund.
2. Review the overall asset allocation of your investments.
3. Have the financial option to retire at John's age 65 and cover retirement expenses (required + desired expenses) of $\$ 6,000$ per month ( $\$ 7,500 /$ mo with taxes factored in) until Jane's age 90.
4. Fund college education for your child.
5. Assure that in the event of an untimely death, the surviving spouse is able to maintain his/her desired lifestyle.
6. Analyze current estate and determine appropriate action to take.

## Recommendations

## RECOMMENDATIONS

The following recommendations are not listed in order of priority or importance. Some recommendations should be implemented immediately while others are given as long-term concepts to consider.

## 1. OBJECTIVE: Maintain an adequate emergency fund.

An appropriate emergency fund usually covers three to six months of expenses, but could be more depending on the security of your jobs. When two spouses are employed and job security is relatively high, a three month emergency reserve can suffice. Since both spouses work, an emergency fund consisting of 3 months of expenses would be appropriate. Your monthly basic living expenses are estimated to be $\$ 6,000$; therefore, a 3 month emergency fund of $\$ 18,000$ would be appropriate. These funds should be held in an FDIC guaranteed type account such as a money market account or a savings account. You currently have approximately $\$ 30,000$ that qualifies as emergency funds so this goal is overfunded by $\$ 12,000$. It is recommended that you utilize this excess to either fund your child's education goal or your retirement.
2. OBJECTIVE: Review the overall asset allocation of your investments.

In reviewing the overall asset allocation of your retirement investments, your time horizon and risk tolerance suggests that the "Moderate Growth" portfolio (54\% stocks / 20\% bonds / 26\% alternatives) may be most appropriate.
Since we review whether your accounts need to be rebalanced on a daily basis, your allocation is already in order.
3. OBJECTIVE: Have the financial option to retire at John's age 65 and cover retirement expenses (required + desired expenses) of $\$ 6,000$ per month ( $\$ 7,500 /$ mo with taxes factored in) until Jane's age 90.
At retirement, your investments need to be valued at approximately $\$ 4,928,126$ in order to cover your retirement expenses. Based on the assumptions utilized, your investments are projected to grow to $\$ 4,876,049$ at retirement. This leaves a shortfall of $\$ 52,077$. As a result of the shortfall, it is recommended that John set up a Roth IRA and attempt to fund it with the maximum amount allowed (currently $\$ 458 / \mathrm{mo}$ ).
4. OBJECTIVE: Fund college education for your child.

In order to fully fund the college education of Johnny you will need to set aside approximately $\mathbf{\$ 2 3 9}$ per month. If you desire to start setting money aside for this goal, I suggest doing so in your existing 529 College Savings Account. We will further discuss this goal when we meet and whether or not this goal should take priority over other goals you've established.
5. OBJECTIVE: Assure that in the event of an untimely death, the surviving spouse is able to maintain his or her desired lifestyle.

The survivor analysis suggests that Jane would have a Capital Shortfall of $\$ 1,244,989$ in the event of John's untimely death. In other words, to provide Jane with her standard of living until her age 90, additional insurance coverage of $\$ 1,244,989$ is needed on John's life.

The survivor analysis suggests that John would have a Capital Shortfall of $\$ 297,186$ in the event of Jane's untimely death. In other words, to provide John with his standard of living until his age 90, additional insurance coverage of $\$ 297,186$ is needed on Jane's life.

Ideally, I like to see insurance in place up until the point you reach retirement. At that point, a death will not cause a financial hardship, so long as the retirement goal has been met. In essence, the goal is to self insure when you enter retirement.
Therefore, I am recommending that each of you obtain a 30 year term policy. Additionally, I recommend that you add a child rider to the policy to cover you financially in the event that Johnny would unexpectedly pass away. See below for quote of proposed coverage.

| Proposed Coverage | Coverage | Monthly Cost |
| :---: | :---: | :---: |
| John <br> 30 Year Term <br> Jane <br> 30 Year Term | $\$ 1,300,000$ | $\$ 108$ |
| TOTALS | $\$ 1,600,000$ | $\$ 31$ |

[^1]
## 6. OBJECTIVE: Analyze current estate and determine appropriate

 action to take.To help ensure your wishes are carried out (and in the most taxefficient fashion), you should have all legal documents prepared and then reviewed on a periodic basis. You currently do not have any estate planning documents. As such, the first item of interest is whether you should have a Will or whether you should have a Trust.

If a Will is drafted, a portion of your estate will eventually be subject to probate. The disadvantages of probate is that it is expensive, lengthy, and public (i.e. your Will can be viewed by the public). A Trust on the other hand will not be subject to probate, which means that your heirs will end up with a larger estate than if a Will were utilized. Additionally, a Trust usually passes assets to heirs more efficiently than a Will.
If you don't have any estate planning documents and you both pass away while your child is a minor, then the courts will appoint a conservator to manage your assets for the benefit of your child. This would be true even if you had a Simple Will. This is a very time consuming and expensive process as the conservator has to appear before the courts each year and give an accountability of the funds spent on your child. You can avoid this issue by having a Trust drafted. Due to the disadvantages of probate and the conservator issue, I recommend that a Revocable Living Trust be drafted.
In addition to having a Will or a Trust, it will be prudent for you to have the following estate planning documents drafted: (1) Health Care Power of Attorney, and (2) Financial Power of Attorney. A Healthcare Power of Attorney is a document in which you appoint someone to handle your health related matters in the event you cannot do so. A Durable Power of Attorney is a document in which you appoint someone to handle your financial related matters in the event you cannot do so. Without these documents, you could find yourself in a very expensive and time consuming situation whereby the courts become involved. If you do not have an attorney that you utilize, our firm can refer one to you.

## RECOMMENDATION SUMMARY

1. Use excess $\$ 12,000$ in savings to fund education or retirement goal.
2. Set up Roth IRA for John and begin funding at $\$ 458 / \mathrm{mo}$.
3. Begin saving $\$ 239$ per month to Missouri MOST 529 College Savings Account.
4. Consider obtaining life insurance of $\$ 1,300,000$ for John ( $\$ 108 / \mathrm{mo}$ ) and \$300,000 for Jane (\$31/mo).
5. Have Revocable Living Trust, Healthcare Power of Attorney, and Financial Power of Attorney drafted.

## Asset Allocation

## John and Jane Doe

Portfolio Summary - 9/30/2013 (Retirement Accounts)

| ACCOUNTS UNDER MANAGEMENT | FBO | Inception Date | Total Contributions | Total Withdrawals | Total Net Contributions | Current Value | Net Growth | MODEL | Percent of Portfolio |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| B.E.S.T. Wealth Non-IRA Account | Joint | 1/1/11 | \$92,228 | \$0 | \$92,228 | \$105,000 | 13.85\% | 80-20 | 86.8\% |
| B.E.S.T. Wealth Roth IRA | Jane | 1/1/11 | \$14,050 | \$0 | \$14,050 | \$16,000 | 13.88\% | 80-20 | 13.2\% |

## Current Portfolio

## Proposed Portfolio

## Retirement

## RETIREMENT ASSUMPTIONS

1. Retirement expenses (required + desired expenses) are projected to be $\$ 6,000$ per month ( $\$ 7,500$ per month with taxes factored in) from John's age 65 to Jane's age 90.
2. Combined federal / state tax rate of $20 \%$ utilized.
3. All retirement assets were assigned a rate of return of $7 \%$ during pre-retirement and 5\% during retirement.
4. Social Security was NOT factored into the analysis.
5. Missouri Public School Retirement System pension NOT factored in to the analysis.
6. John will continue to contribute 10\% (\$833/mo) to his 401(k) and the company will match up to $4 \%$ of salary (\$333/mo) until he retires at age 65.
7. Jane will continue to contribute $5 \%$ to her 403(b) until she retires at age 63. There is no company match.
8. Jane will continue to contribute $\$ 458$ / mo to her Roth IRA until she retires at age 63.

## Retirement Objective How much do you need?

Assuming: John's mortality age 90, Jane's mortality age 90

Your retirement income objective has been illustrated above. Your objective in the first year of retirement results in the following:

Total annual income objective in first year of retirement
\$231,757
Total annual income objective in today's dollars* \$90,000

In order to meet your income objective throughout your retirement, the amount of money needed at the beginning of retirement, in an account earning $5.00 \%$, would be the following:

Total capitalized income objective
\$4,928,126
The goal of the retirement analysis is to determine if your objective above can be met with expected income sources (e.g., Social Security) and withdrawals from assets (e.g., 401(k), IRA).
*Calculated using a long-term inflation rate of $3.00 \%$.

## Retirement Income Sources <br> What income will be available?

Assuming: John's mortality age 90, Jane's mortality age 90

Charted above are your expected income sources. Income sources will be guaranteed to varying degrees and should be matched to the appropriate needs. Social Security benefits, for example, could be viewed as fairly guaranteed when compared to the income from a personally managed rental property. Ideally, the most important needs should be covered by your most guaranteed income sources, while less important needs can be covered by less guaranteed income and investment assets.

Generally in this analysis, income sources are used to pay expenses each year before withdrawals from assets are made. If there is more than enough income, the excess will be spent.

## Retirement Income Sources Timeline

What income will be available?

## Income Applied to Retirement Objective

## Can your retirement assets provide the rest?

Assuming: John's mortality age 90 , Jane's mortality age 90

In the chart above, the analysis has applied your expected income sources against your retirement income needs. In any year that a shortfall exists (where the total need is larger than the available income), the analysis will attempt to cover the shortfall through withdrawals from your retirement portfolio (e.g. $401(\mathrm{k})$, and IRA). In any year where there is more income than need, the excess income will be spent. The table below summarizes the analysis so far

| Capitalized Value* | Amount | \% of Total |
| :--- | ---: | ---: |
| Total capitalized income objective | $\$ 4,928,126$ | $100 \%$ |
| Capitalized applied income sources | $\$ 0$ | $0 \%$ |
| Capitalized amount needed from assets | $\$ 4,928,126$ | $\mathbf{1 0 0 \%}$ |

*Capitalization is a way of treating a series of cash flows as a lump sum, deposited in a hypothetical account with a return of $5.00 \%$.

## Retirement Capital Available How Much Will You Have at Retirement?

The capitalized value of your retirement need after applying available income sources is $\$ 4,928,126$. This means that if you had this amount sitting in a taxable account at retirement earning $5.00 \%$, your retirement needs would be covered. However, the types of assets you own (e.g., qualified accounts, investment accounts) and their expected return will significantly change the actual amount required. The retirement analysis will apply the assets listed below to your remaining retirement need to determine if your objective has been met.

| Retirement Capital | Total Value at Retirement |
| :--- | ---: |
| Bank Accounts | $\$ 0$ |
| Roth Accounts | 752,745 |
| Investment Accounts | 915,103 |
| Deferred Annuity Accounts | 0 |
| Non-deductible Qualified Accounts | 0 |
| Deductible Qualified Accounts | $3,208,201$ |
| Total Capital Available for Retirement | $\$ 4,876,049$ |

These results are hypothetical and are not a promise of future performance.

## Retirement Capital Available Details How Much Will You Have at Retirement?

| Accounts | Owner | Current <br> Market <br> Value | Total <br> Value <br> Today | Market <br> Value at <br> Retirement | Total <br> Value at |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Retirement |  |  |  |  |  |

These results are hypothetical and are not a promise of future performance.

## Retirement Analysis Results Has the objective been met?

Based on the analysis of your retirement needs, expected income sources and available assets, your objective will be satisfied until age 89 . Out of 27 retirement years, 26 years had no unmet needs.

| Capitalized Value* | Amount | \% of Total |
| :--- | ---: | ---: |
| Capitalized income objective | $\$ 4,928,126$ | $100 \%$ |
| Capitalized applied income sources | $\$ 0$ | $0 \%$ |
| Capitalized applied assets | $\$ 4,876,049$ | $99 \%$ |
| Unmet Need | $\$ 52, \mathbf{0 7 6}$ | $\mathbf{1 \%}$ |

Below are several options to consider which might improve your results. As an alternative, a blend of saving more, spending less or earning more may be preferable for your situation:
> Increase average expected portfolio return from $\mathbf{6 . 4 0 \%}$ to $\mathbf{6 . 4 2 \%}$
$>$ Save $\$ 55$ more per month (level) in a hypothetical account earning $\mathbf{5 . 0 0 \%}$
$>$ Reduce desired future monthly income need from $\mathbf{\$ 1 9 , 3 1 3}$ to $\mathbf{\$ 1 9 , 1 0 9}$
These results are hypothetical and are not a promise of future performance.
*Capitalization treats a series of cash flows as a lump sum, deposited in a hypothetical account with a return of $5.00 \%$.

## Retirement Capital Results Assets At Work Over Time

Qualified Accts. Non-Qualified Accts.

Assuming: John's mortality age 90, Jane's mortality age 90

Portfolio performance is a key factor to retirement success. How much your portfolio provides will be dependent on four things: 1) How much you put in; 2) The amount and timing of withdrawals; 3) The types of investments (e.g., tax-advantaged); and 4) The growth of your portfolio as compared to inflation.

| Performance Milestones | Amount |
| :--- | ---: |
| Average expected portfolio return | $6.40 \%$ |
| Retirement capital today | $\$ 262,000$ |
| Pre-retirement portfolio additions | $\$ 703,488$ |
| Pre-retirement portfolio withdrawals | $\$ 0$ |
| Pre-retirement portfolio growth | $\$ 3,910,561$ |
| Capital available at retirement | $\$ 4,876,049$ |
| Portfolio additions during retirement | $\$ 0$ |
| Portfolio withdrawals during retirement | $\$ 9,249,594$ |
| Portfolio growth during retirement | $\$ 4,373,545$ |
| Capital remaining at end of plan | $\$ 0$ |

These results are hypothetical and are not a promise of future performance.

## Retirement Capital Results Timeline Contributions, Withdrawals and Growth

| Age | Additions to Portfolio |  | Withdrawals from Portfolio |  |  |  | Total <br> Growth | Total <br> Portfolio <br> Balance |

## Survivor Needs

## SURVIVOR NEEDS ASSUMPTIONS (John unexpectedly passes away)

1. Monthly expenses estimated to be $\$ 6,000$ ( $\$ 7,500$ per month with taxes factored in) until age 90.
2. Combined federal / state tax rate of $20 \%$ utilized.
3. Jane will continue to work until her age 65 earning $\$ 4,167$ per month. Income is assumed to increase 3\% per year.
4. The calculation includes John's current life insurance death benefits totaling $\$ 300,000$.
5. Mortgage and non-mortgage debt will be paid.
6. College funding will NOT be provided.
7. Your plan provides for funeral expenses of $\$ 15,000$.
8. Your life insurance proceeds are anticipated to grow at $5 \%$ annually.
9. Social Security survivor benefits were factored into the analysis:
a. $\$ 3,200 / \mathrm{mo}$ - today until 2024
b. $\$ 1,600 / \mathrm{mo}-2024$ until 2026
10. All retirement assets are immediately available to fund needs of Jane if needed.
11. Jane will not continue to make retirement contributions to her 403(b) as her income is not enough to cover monthly expenses.
