# Introduction to product road maps

---

## Purpose

Product road maps are designed to support the product adoption planning activities of SAP customers. A product road map helps a customer match short term and long term goals with technology plans.

A product road map describes how the feature / function capabilities in an SAP product or technology are planned to progress over time, in general:

- Today = changes in the current release version
- Planned Innovations = changes planned in one or more upcoming development releases (up to 12-18 months).
- Future Direction = proposed themes for a product or technology beyond the planned releases

## Complementary resources

For a more general description of the business problems / processes being solved and supported by SAP, refer to Solution Road maps.

For more detailed technical information please refer to the Product Availability Matrix, Ramp-up Knowledge Transfer materials and product documentation.

# SAP Internet of Things (IoT)

## Product description

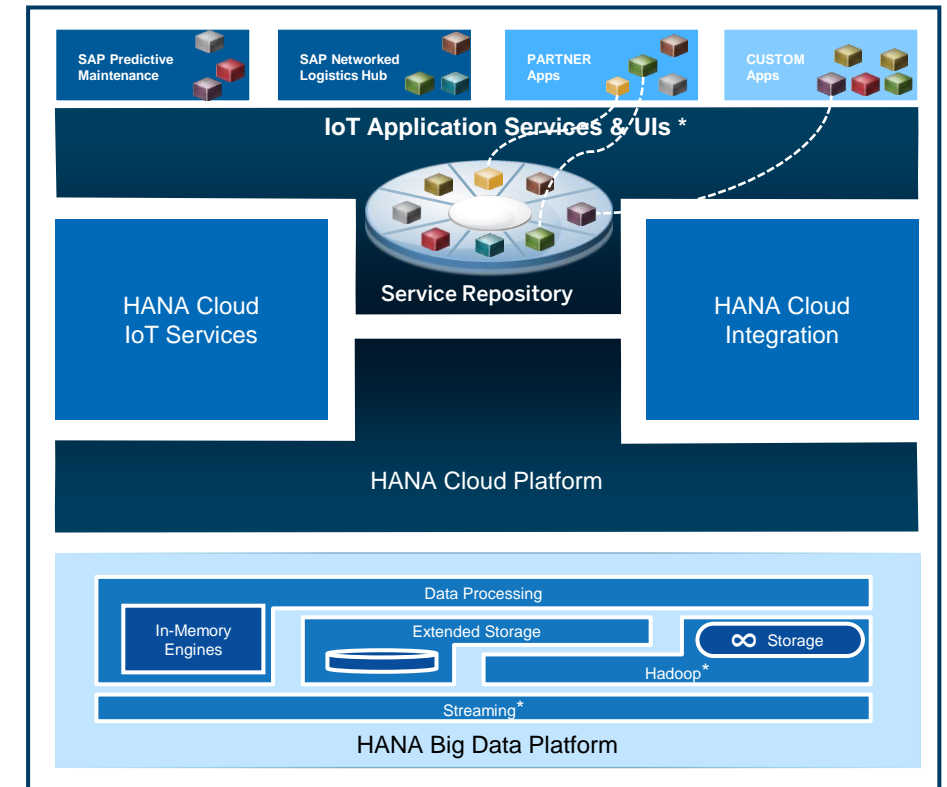

The world is becoming smarter with the digital economy and this is influencing companies in dramatic ways. The number of connected things is expected to grow to 50 billion by 2020.

While costs of sensors and wireless technologies are deteriorating, SAP Internet of Things enables customers to:

- Connect their machines and smart devices with a powerful IoT platform
- Analyze data in real time
- Leverage this information across the value chain to get new business insights

Based on the powerful integration with S/4HANA, SAP provides end to end solutions enabling new business models and smart services which have not been possible before.

This will help companies to leverage big data and new technologies to change everything from product design to how customers are served.

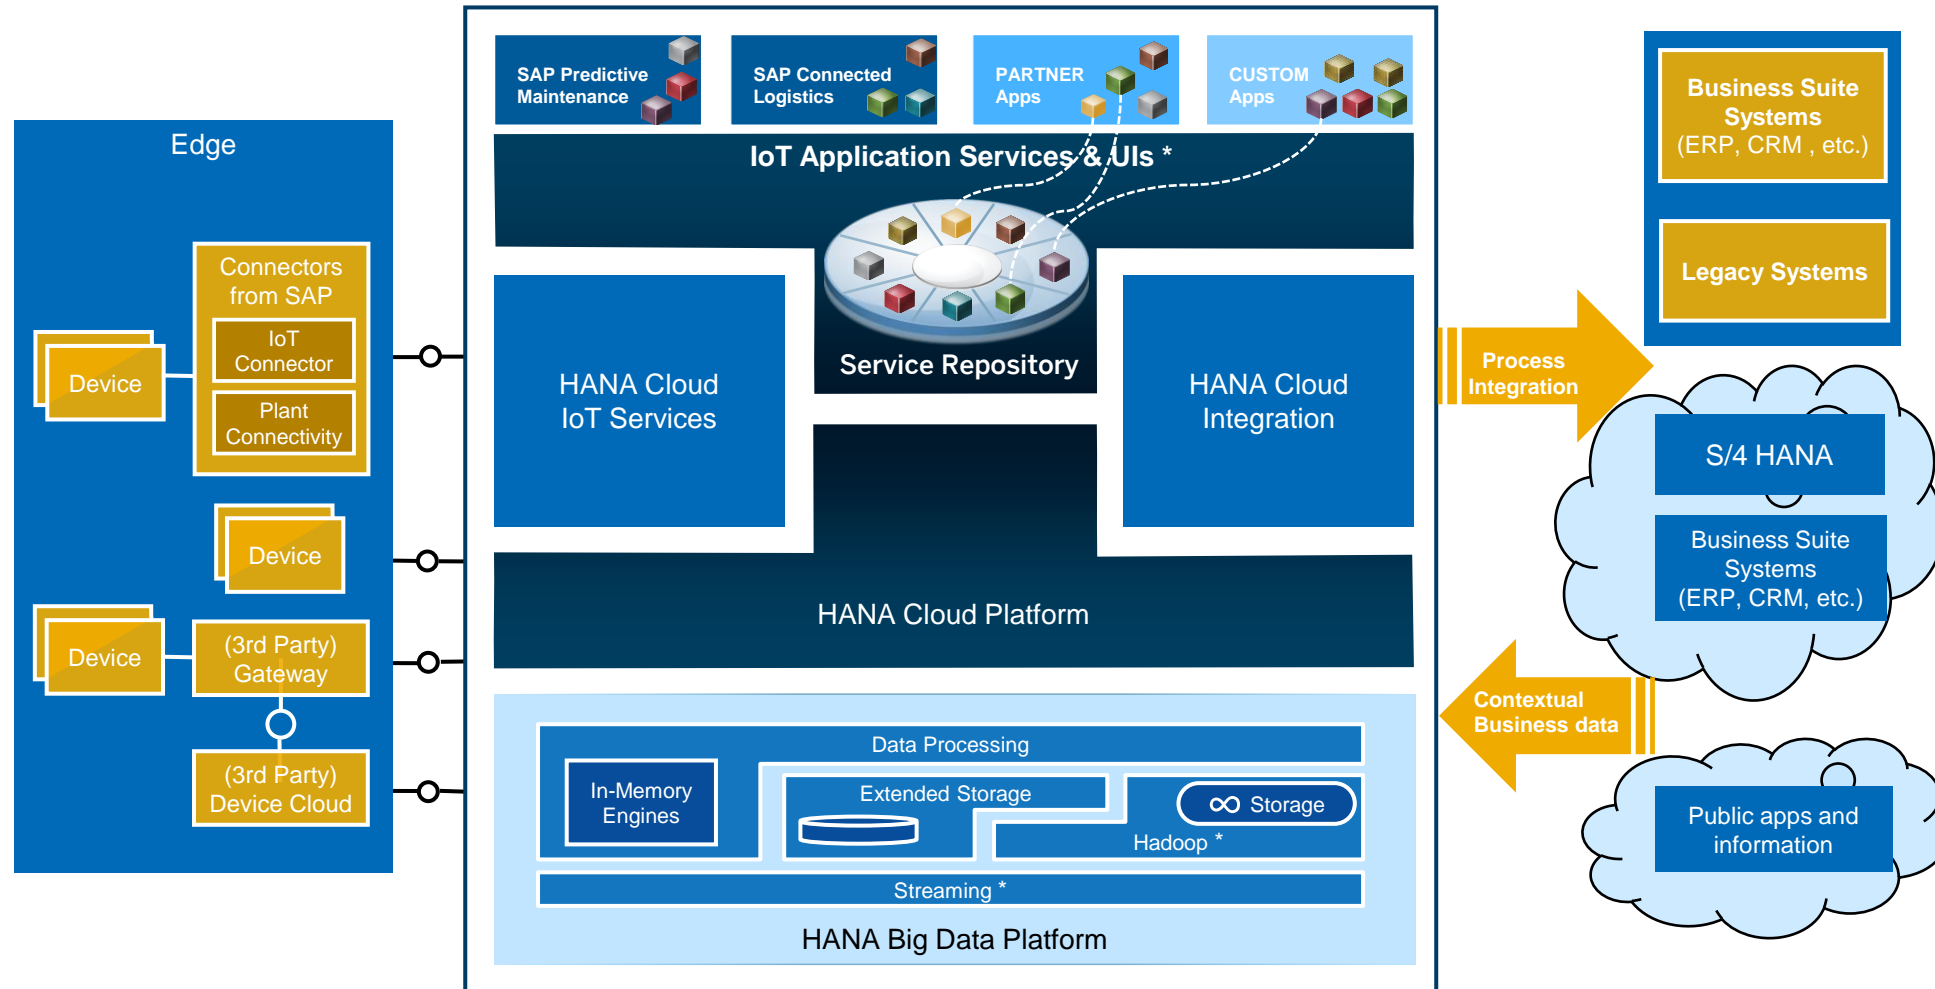

\* This is the current state of planning and may be changed by SAP at any time.

# HANA Cloud Platform for the Internet of Things

## Device and process integration capabilities

\* This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things

## Product road map overview - key themes and capabilities

### Today

#### Platform

- HANA Cloud Platform as a PaaS and Extension Platform for Internet of Things (IoT) scenarios
- Wide range of IoT-related database and application services (e.g. analytical capabilities) in order to support industry specific scenarios
- Capabilities for device connectivity, device management and message handling (e.g. SAP HANA Cloud Platform IoT Services)

#### Applications

- SAP Predictive Maintenance and Service for remote condition monitoring
- SAP Networked Logistics Hub for Increased Turnover of goods and real-time in-transit visibility
- SAP Connected Manufacturing for Real-time visibility and control of shop floor operations\*
- SAP Vehicle Insights\*\* for Vehicle Analytics
- SAP Smart Business services for integrated KPI visualization & insights

#### Integration & Process Innovation

- Business process integration with SAP Enterprise Asset Management, Cloud for Customer and S/4HANA
- Mobile integration with smart devices (Augmented Reality)

(Q3 2015)

### Planned Innovations

#### Platform

- Leverage Cloud Foundry to take advantage of latest cloud and open source technologies (e.g. additional runtimes)
- Extended Big Data Platform, e.g. support of various databases, streaming capabilities
- Additional Data Centers in Japan and China
- Additional HCP platform services, e.g. gamification service
- Improved machine and device integration (IoT connector)
- High performance messaging service (MQTT support)

#### Applications

- Improved prediction and vibration analysis for rotating equipment
- SAP Asset Intelligence Network for shared equipment registry & improved collaboration between business partners
- Connected manufacturing for high speed automation
- Support of SAP Networked Logistics Hub in multiple industries with improved transparency & SCM integration
- Building and extending new applications based on powerful IoT application services
- New IoT scenarios, e.g. for utilities and other industries

#### Integration & Process Innovation

- Enhanced business process integration
- Leverage the power of the Business Network

### Future Direction

#### Platform

- Extended Availability of SAP HANA Cloud Platform
- Support for deployments in data centers of customers / partners
- Infrastructure based on OpenStack
- Additional services, e.g. Hadoop

#### Applications

- SAP Predictive Maintenance and Service extended with Predictive Spare Parts Management scenario support
- Digital Object Memory to support Track & Trace and Track and Assembly across the value chain
- Additional IoT Application Services and powerful IoT Application Builder
- New IoT Scenarios and Enhanced IoT applications
- Advanced analytics and predictions

#### Integration & Process Innovation

- Enterprise Marketplace / App store for IoT services
- Enable New Business Models like Product-as-a-Service

\* Shop floor integration / Industrie 4.0

\*\* Early Adoption

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Platform

## SAP HANA Cloud Platform - PaaS and extension platform for IoT scenarios

**SAP HANA Cloud Platform supports different runtimes/programming models (Java, XSJS, HTML5) and offers standards-based development. The cockpit is the consolidated destination for all operational needs.**

### Java, XSJS and HTML5 programming models

- Application runtime containers for Java development
- Development of “native” SAP HANA applications by means of SAP HANA Extended Application Services (XSJS)
- HTML5 infrastructure to build and run HTML5 applications in the cloud

### Standards-based development environment

- Use of the popular open-source Eclipse IDE on the local computer together with the SAP HANA Cloud Platform SDK
- SAP Web IDE to enable developers, business experts and designers to build new business applications in the cloud with zero footprint
- UI Theme Designer as the tool for theming and branding SAP’s key user interfaces

### HANA Cloud Platform cockpit for all operational needs

- Configuration
- Deployment
- Monitoring

### API Management for simple, scalable and secure access to digital assets

### SAP HANA App Center ecommerce showcase channel to evaluate, consume and market HANA Cloud Platform applications

A detailed product road map for SAP HANA Cloud Platform is available on SAP Service Marketplace

# SAP Internet of Things - Platform

## SAP HANA Cloud Platform - Infrastructure

**SAP HANA Cloud Platform runs in SAP's data centers around the globe. It offers certified world-class tier-3 and 4 data centers with 24/7 global support and 99.9 % availability.**

### World-class tier-3 and 4 data centers

- Customers / partners choose the data center which they want to use
- Currently SAP HANA Cloud Platform is available in data centers in
  - St. Leon-Rot, Germany
  - Amsterdam, Netherlands (only for disaster recovery)
  - Ashburn (Virginia), United States
  - Phoenix (Arizona), United States
  - Sydney, Australia

### Secure and compliant infrastructure with 99.9% availability

- Certifications, e.g. ISO 9001, ISO 27001
- SAP warrants 99.9% system availability over any calendar month

# SAP Internet of Things - Platform

## SAP HANA Cloud Platform - Wide range of services

**SAP HANA Cloud Platform gives developers access to many database, application and business services which can be used while building new applications and extensions.**

### Powerful database services

- SAP HANA
  - Supported editions: base, platform
  - Supported sizes (RAM): 32 GB, 64 GB, 128 GB, 256 GB, 512 GB, 1 TB (bigger sizes up to 3 TB on request)
  - Exemplary capabilities
    - Predictive Analysis Library
    - Series Data Storage & Services
    - Spatial Processing
    - Text Search and Analysis
- SAP ASE
  - High operational efficiency at very competitive cost
  - Can be used for scenarios where the power of SAP HANA is not needed (e.g. for small data volumes with low business value)

### Wide range of application and business services

- Connectivity Service
- Content Services
- SAP Fiori Apps
- SAP Forms as a Service by Adobe
- Gamification Service
- HANA Cloud Integration
- IoT Services
- SAP Jam
- Mobile Services
- Remote Data Sync Service
- Portal Services
- Security Services
- SAP Translation Hub
- SAP Web Analytics
- SAP hybris as a Service

# SAP Internet of Things - Platform

## Device integration capabilities

Today

### Device Integration capabilities

#### Connector based integration

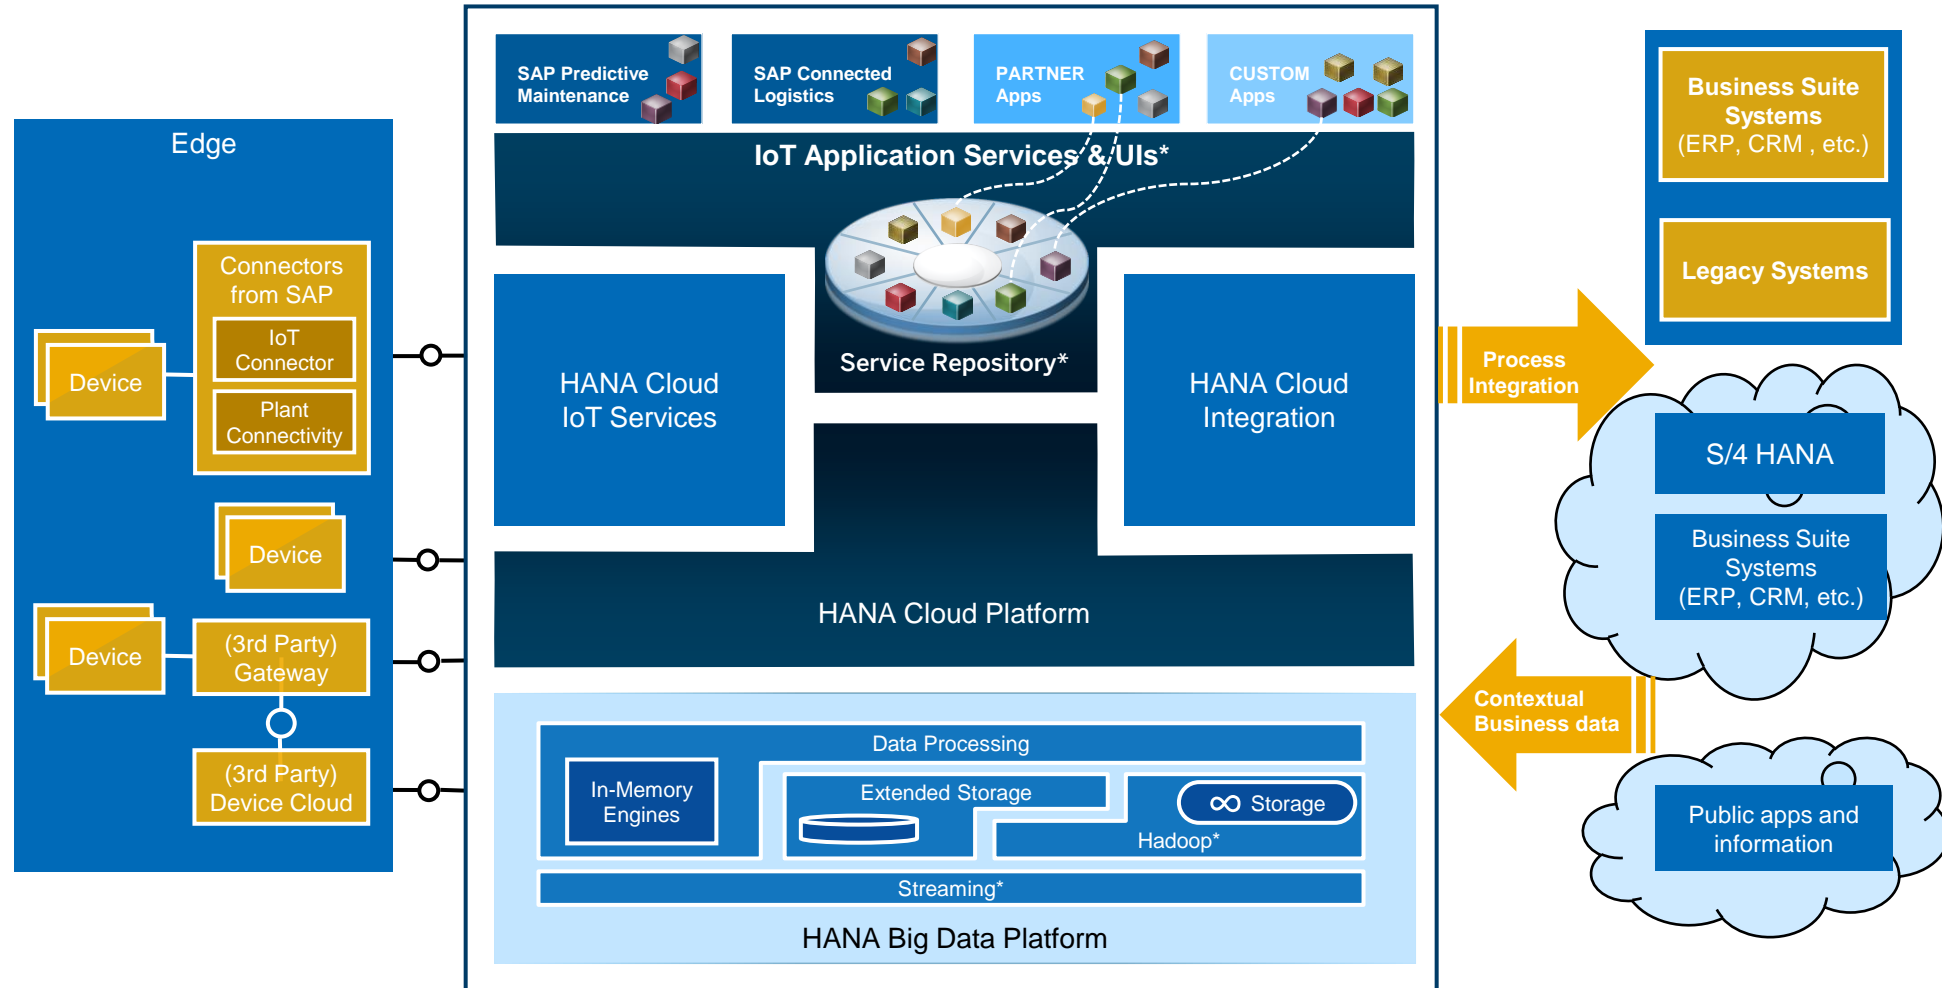

- Integrate all kinds of machines or devices with a client software from SAP (either SAP IoT Connector\* or SAP Plant Connectivity)

#### API-based integration

- Collect sensor data via different protocols (HTTP, Websockets, MQTT\*) from enabled devices, e.g. based on ARM processors

#### Device Cloud

- Collect sensor data from a 3<sup>rd</sup> party device cloud or partner solutions

\* This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Platform

## SAP HANA Cloud Platform IoT services

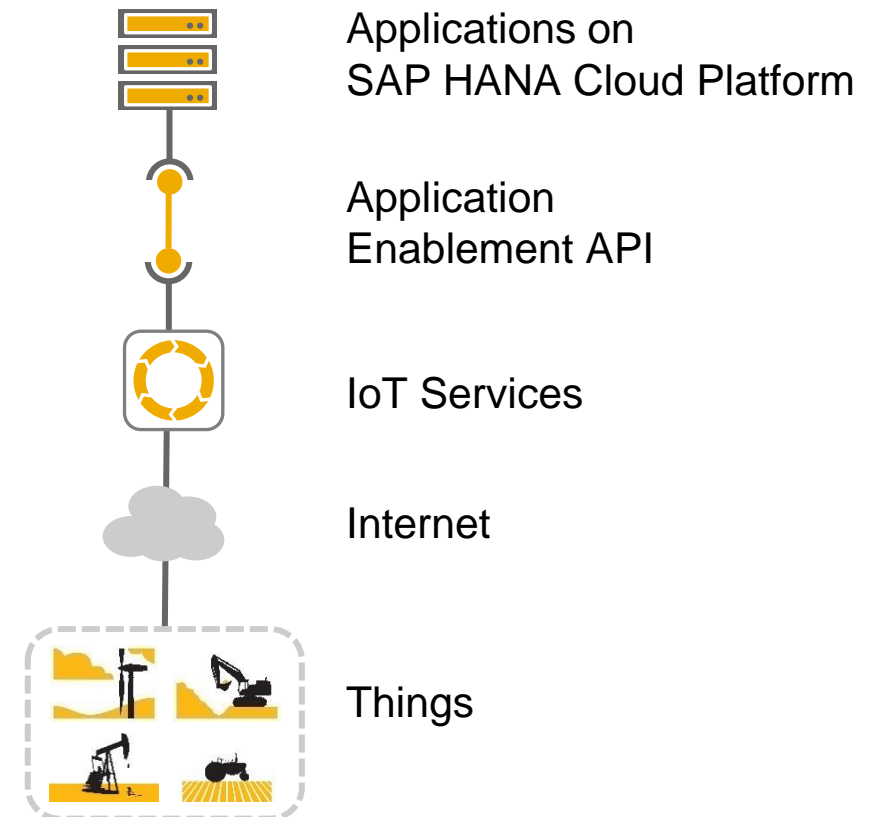

The SAP HANA Cloud Platform IoT Services can be used to connect devices to the HANA Cloud Platform in order to use data from these devices in applications.

### Key capabilities

- Connect to remote devices to manage life-cycle from onboarding till decommissioning
- Receive device data and send commands to remote devices
- Use IoT message management capabilities to collect sensor data and store it in the HANA Cloud Platform persistence layer (HANA or ASE)

### Benefits

- Use data from real-world processes in applications by using device management and message management functionalities

# SAP Internet of Things - Platform

## SAP HANA Cloud Platform Remote Data Sync service

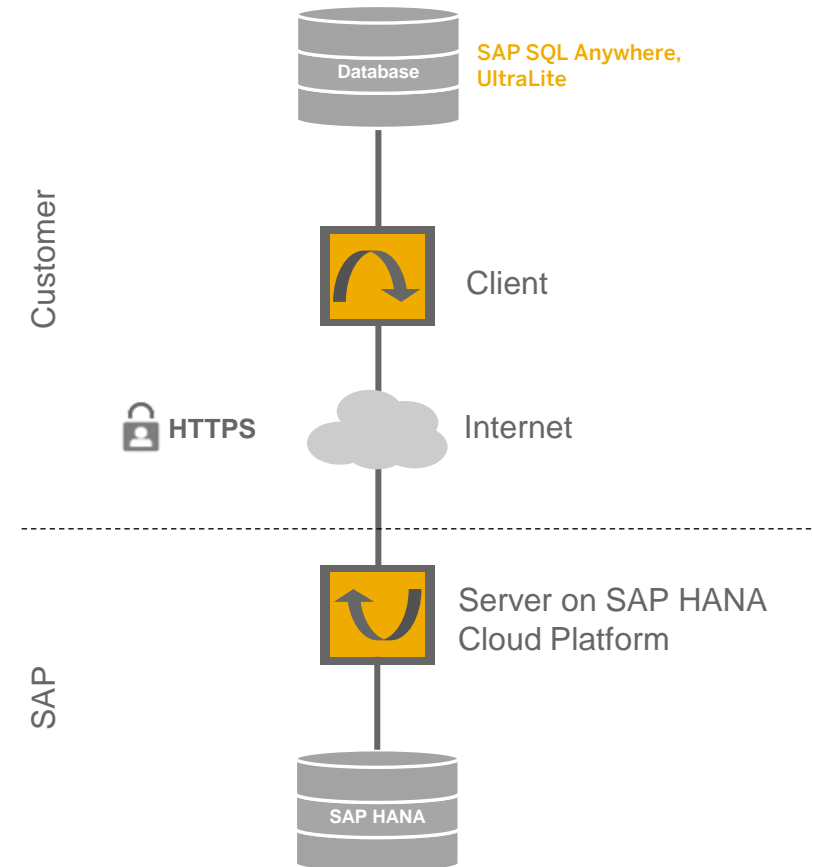

SAP HANA Cloud Platform Remote Data Sync Service provides a service for synchronizing huge numbers of remote databases into a consolidated SAP HANA database in the cloud.

### Key capabilities

- Remote Data Sync service is a synchronization technology for exchanging data between relational databases
- Source database needs to be SAP SQL Anywhere or UltraLite
- Data synchronization with remote databases
- Example: store sensor data in remote databases, consolidate in SAP HANA Cloud Platform, e.g. for analytics and monitoring

### Benefits

- Ensures transactional integrity over unstable networks
- Sophisticated strategies for resolution of data change conflicts

# SAP Internet of Things - Applications

## SAP Predictive Maintenance and Service, cloud edition

### Situational Overview

- Alarm and machine list with quick filtering

### Detailed Machine Master data

- Replication of relevant masterdata from multiple systems

### Powerful Device Health Analytic

- Special target graph for health diagnostics
- Near real-time
- Drill into data
- Display of warning and alarm threshold violation

### Notifications

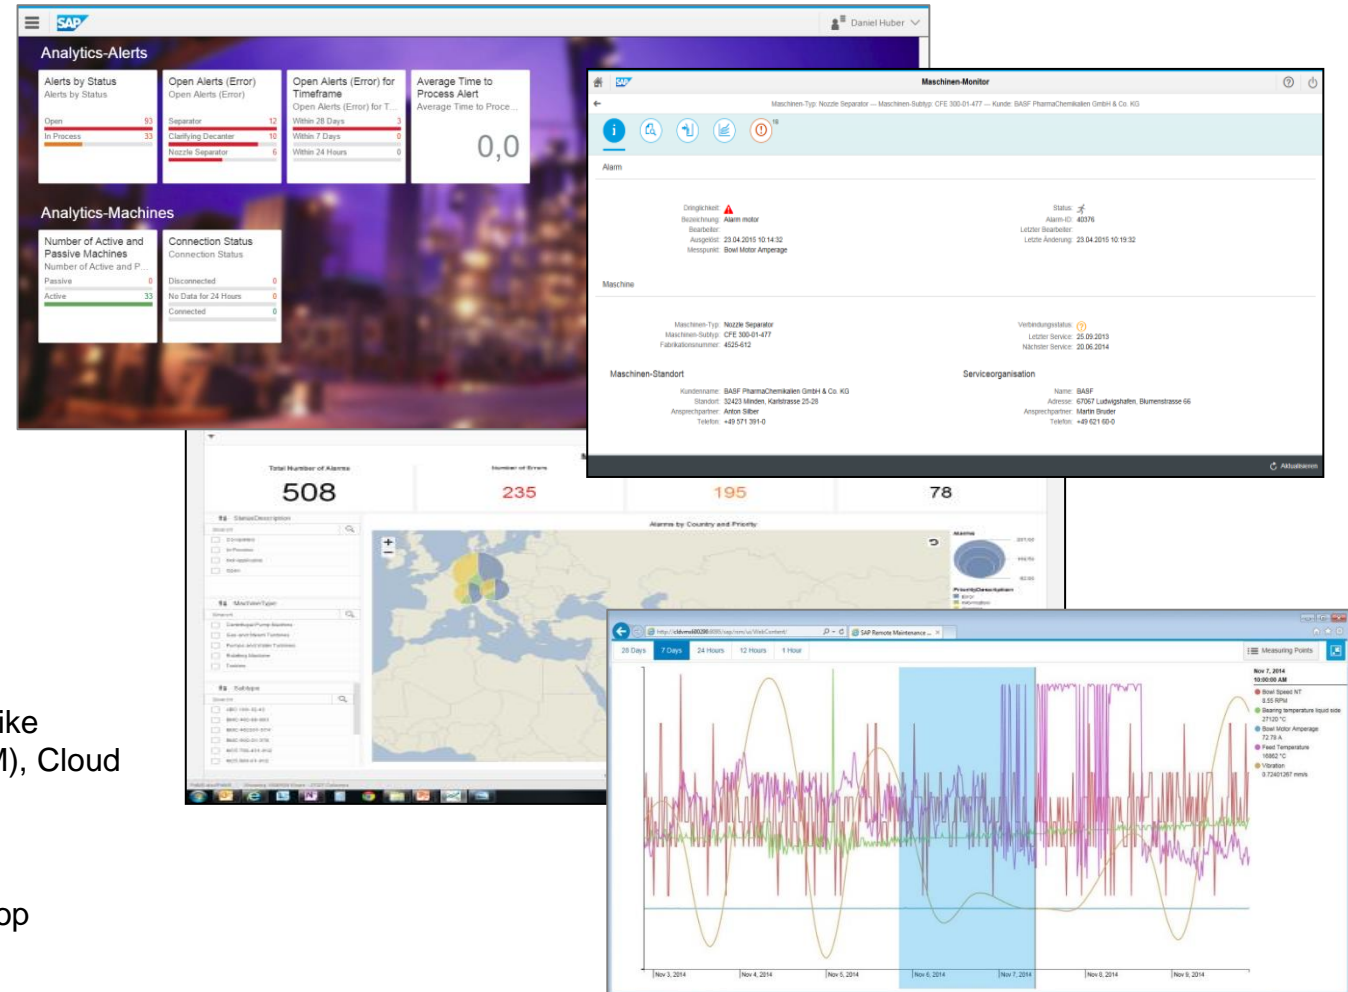

- Notify personnel about alerts from devices via email, etc.

### Business Process Integration

- Create notifications or work orders in business process systems in SAP like ERP/Customer Service (CS), CRM Service, ERP/Plant Maintenance (PM), Cloud for Service

### Analytics

- Leverage SAP Lumira to build your analytics dashboards with Drag & Drop
- Pre-configured machine KPIs

A detailed product road map for SAP Predictive Maintenance and Service, cloud edition is available on SAP Service Marketplace

# SAP Internet of Things - Applications

## SAP Networked Logistics Hub

Today

A business network for collaboration in logistics

### Hub operator

- Gain real-time transparency of infrastructure usage
- Inform drivers of incidents
- Invite business network

### Logistics service provider

- Communicate with drivers
- Gain real-time transparency of transportation progress
- Invite subcontractors

### Carrier and truck driver

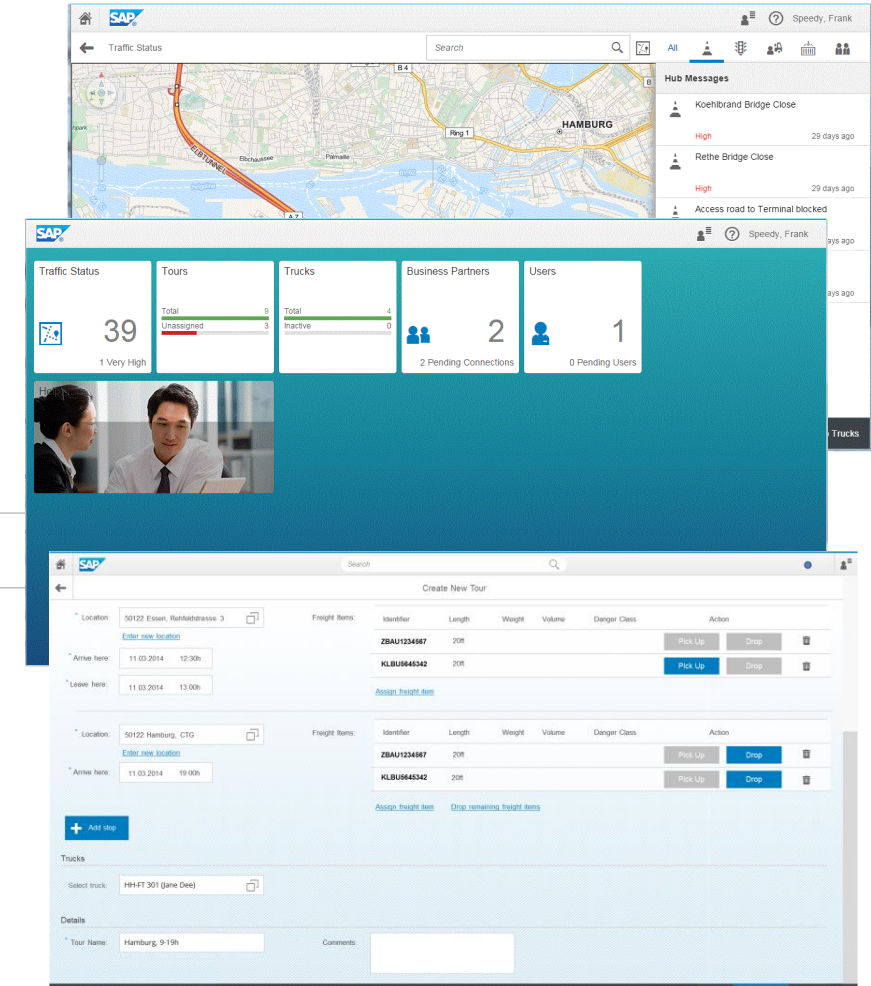

- Get up-to-date information on traffic and recommendations
- Receive order information from dispatcher

## Turn *insights* into *benefits*

- 
- ✓ Improved infrastructure utilization
  - ✓ Increased turnover
  - ✓ Improved competitiveness

- 
- ✓ Higher throughput with less transportation assets employed
  - ✓ Improved on-time delivery

- 
- ✓ Higher customer satisfaction
  - ✓ Reduced idle times toward and at hub

# SAP Internet of Things - Applications

## SAP Connected Manufacturing

### SAP Connected Manufacturing for Real-time visibility and control of shop floor operations

### Manufacturing Execution (ME) and Manufacturing Integration & Intelligence (MII):

#### Manufacturing Execution

Tracking & Tracing on level Serial Number (so called Shop Floor Control SFC)

Non Conformance Handling

Process Interlocking

Production Data Acquisition

KPIs, Reporting & Statistical Process Control

Automation related Master Data (Setpoints)

Highly Extensible

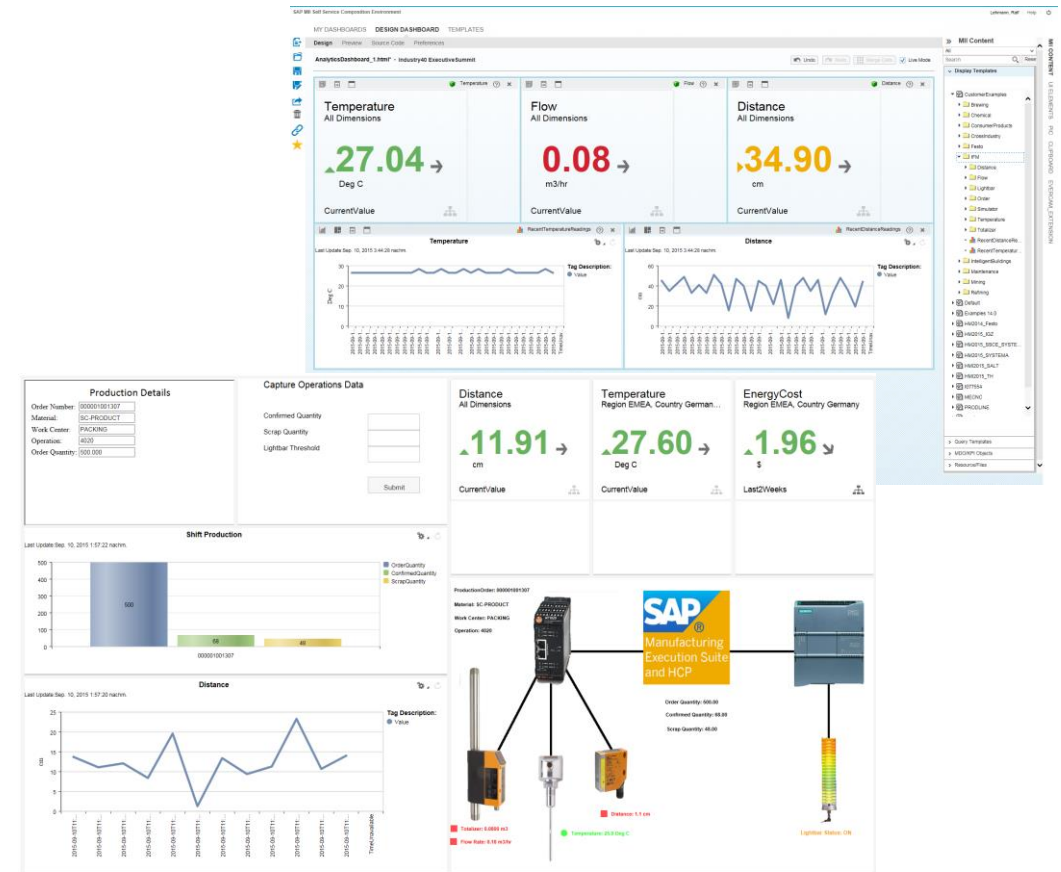

#### Application Enablement

Preferred Data Service for Manufacturing Integration & Intelligence (MII)

incl. Configuration of Plant Connectivity (PCo) set-up from MII

#### Mature Product with broad usage

#### Windows as Operating System required

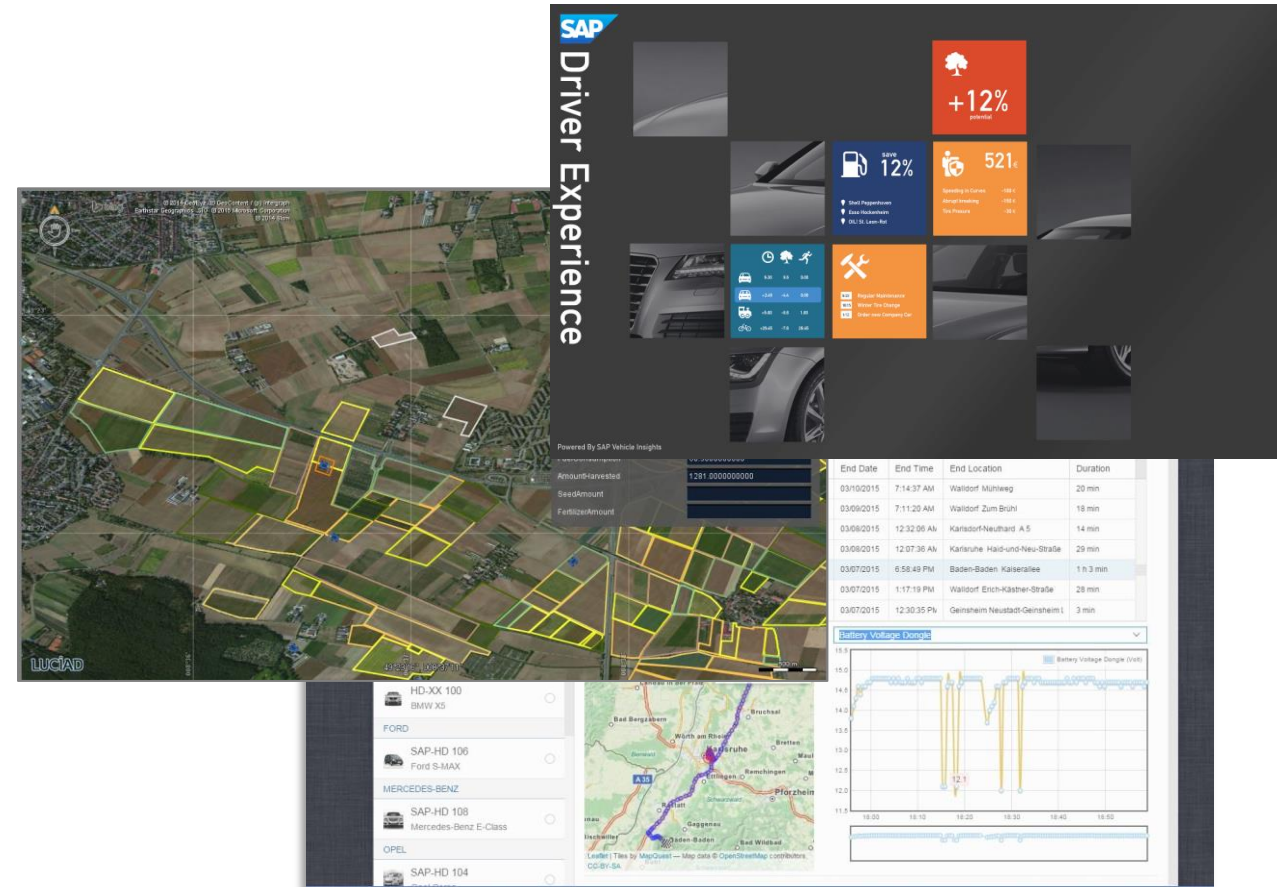

# SAP Internet of Things - Applications

## SAP Vehicle Insights \*

**Vehicle Insights, a cloud-based analytic service platform, enables a variety of new business models by integrating vehicle telematics data and analytic insights.**

- Support for vehicle monitoring, efficient process planning and control
- Integration of real-time sensor data from vehicles in operation and analytic insights into business processes
- Advanced analytic and predictive capabilities based on complex structured and unstructured data
- Enables innovative business processes through flexibility and extensibility
- Development efficiency by platform concept supported by standardized data models
- Easy to consume cloud solution, requires minimal IT involvement and no disruption to existing systems
- Standardized web enabled services with open integration
- Reduced costs through improved operating, process planning, and control efficiency

\* Early Adoption

# SAP Internet of Things - Applications

## SAP Smart Business, cloud edition

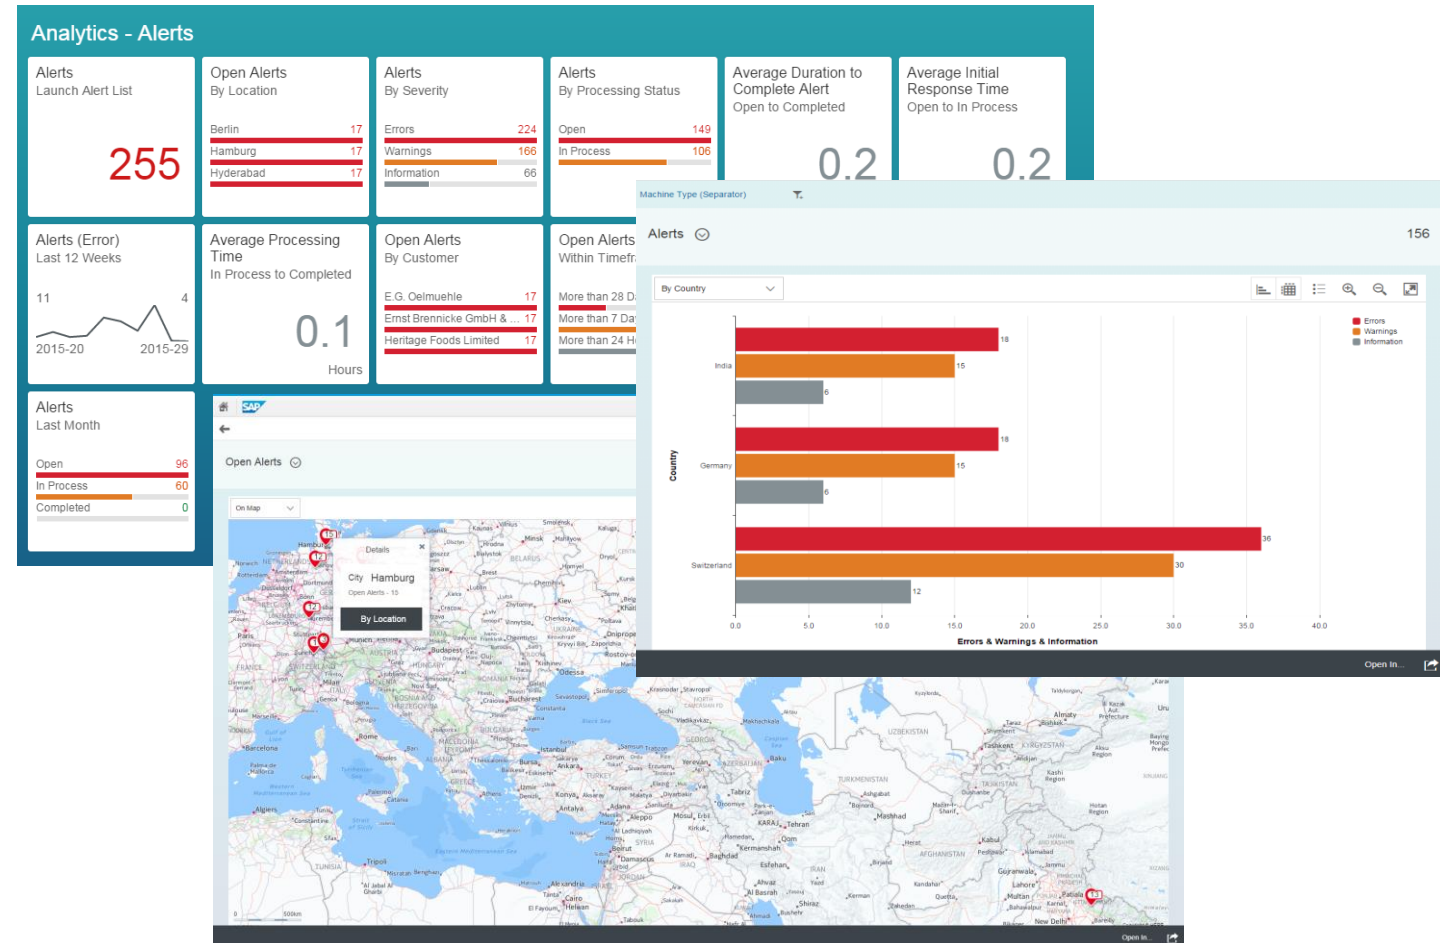

Provide a quick, comprehensive overview of machine KPIs, e.g. in command and control centers

### Visualize machine KPIs and drill-downs

- Visualize your individual machine alerts and KPIs by using SAP Smart Business
- Powerful drill-down scenarios for near real-time insights

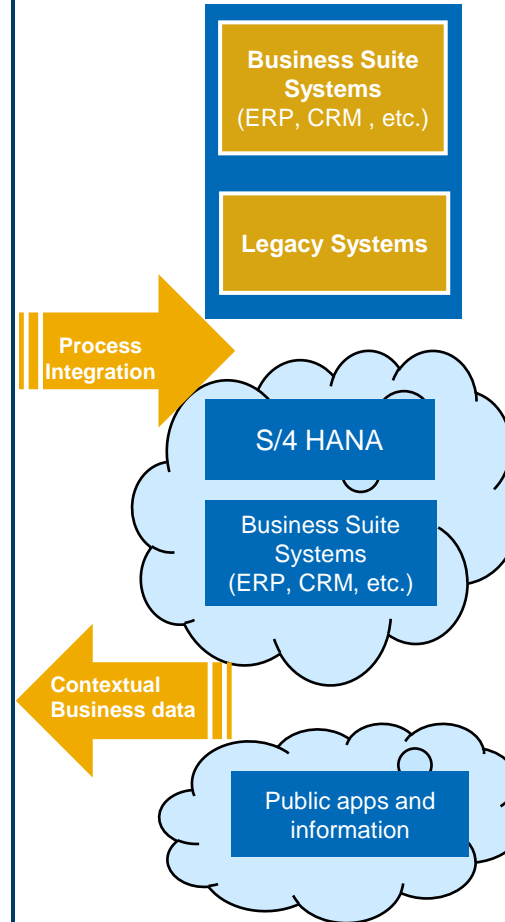

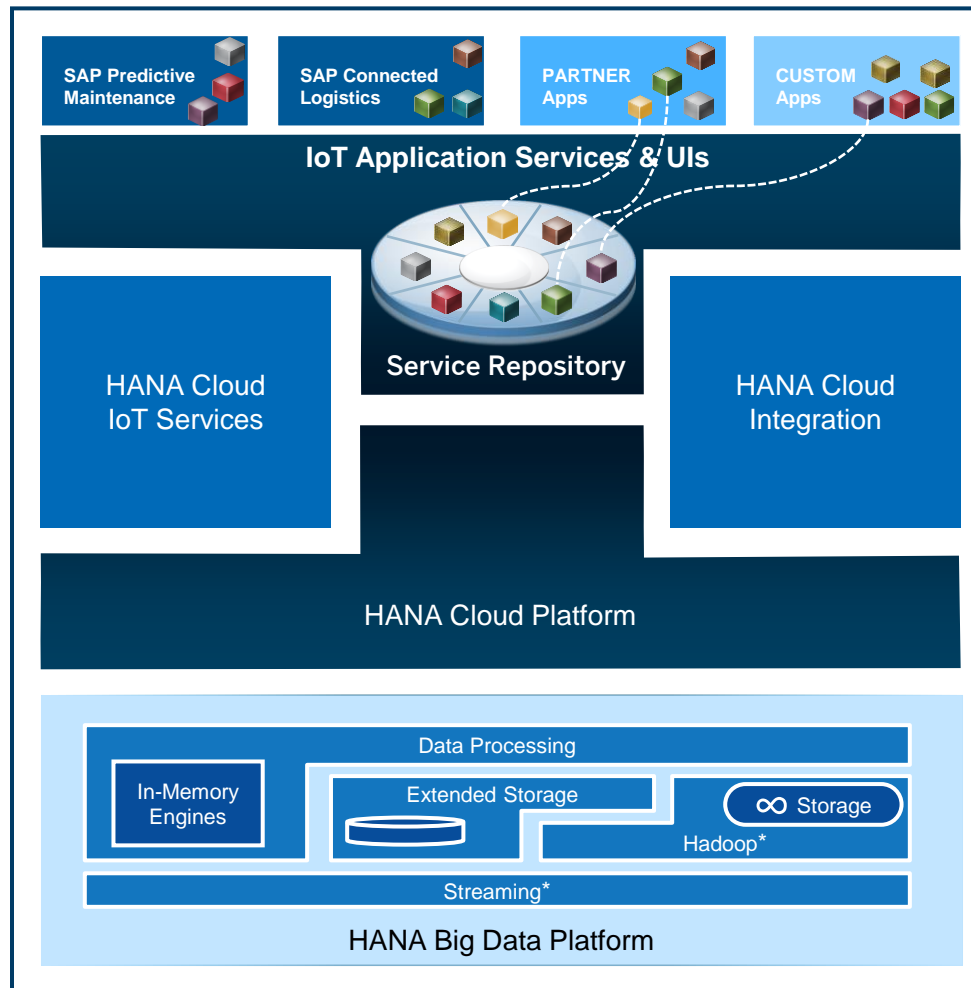

### Map device locations

- Add positioning data to devices for placement on maps
- Graphical drill down to devices with particular alert situations

# SAP Internet of Things – Business Process Integration

## Business process integration with HANA Cloud Integration

Strategic service for OD-OD & OP-OD integration on SAP HANA Cloud Platform

- Pre-packaged integration content hub in cloud – “Discover, Configure, Manage”
- Engineered for Cloud: Multi-tenancy, rolling software updates, horizontal scalability. Subscription-based usage
- Strong focus on security including data isolation
- Used by SuccessFactors, SAP Cloud For Customer, Financial Services Network etc.
- Complementary offering to SAP Process Integration
- Open for partners – projects, content, connectivity etc.
- Available as:
  - SAP HCI Standard Edition, SAP HCI Professional Edition
  - SAP HCI Developer Edition
  - SAP HCI Application Edition (bundled with SAP cloud apps.)
  - SAP HANA AppServices, Premium Edition

\* This is the current state of planning and may be changed by SAP at any time.

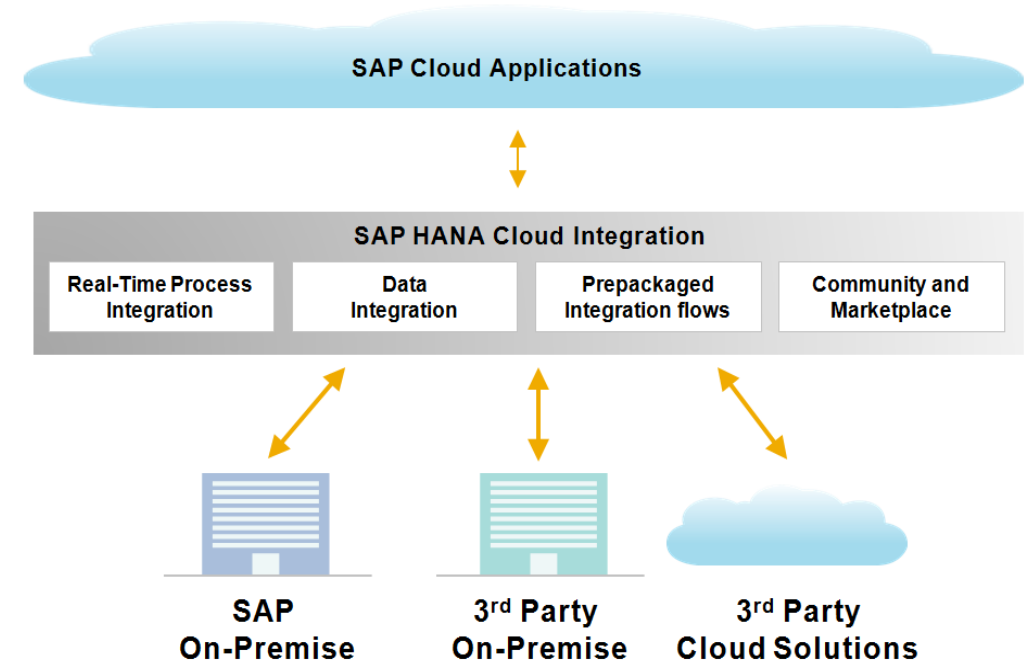

# SAP Internet of Things - Integration

## SAP HANA Cloud Integration

**SAP HANA Cloud Integration is the strategic service for on-premise to cloud & cloud to cloud integration and runs on top of the SAP HANA Cloud Platform.**

### Key capabilities

- Pre-packaged integration content: “Discover, Configure, Manage”
- Certification process for integration content built by partners
- Cloud enabled integration platform
- Security: Data isolation, message & payload (PGP, WS sec., ...) level
- Light weight orchestration
- Diverse connectivity
- ISO27001 certification
- Integration with SAP Solution Manager
- Data consolidation from OP sources

A detailed product road map for SAP HANA Cloud Integration is available on SAP Service Marketplace

# SAP Internet of Things – Integration with mobile devices

## Mobile integration with smart devices (Augmented Reality)

### SAP Work Manager

- Maintain, inspect and repair mission critical assets
- View asset schematics, history, and dependencies
- Generate notifications and work orders on the spot
- Report worker's status, progress, and location
- Install and tag equipment – barcode, RFID, geotag
- Upload Attachments
- Inspection Rounds
- Integration with GIS
- Integration with SAP 3D Visual Enterprise

Android  
iOS  
Windows

### SAP AR Service Technician

- Show 3D Work Instructions
- Record Voice notes
- Video Call with Experts

➡ Companion App to the SAP Work Manager

SAP Mobile Platform

SAP Gateway

SAP Business Suite

➡ Smart Glass App for SAP EWM

### SAP AR Warehouse Picker

- Replace Handscanners in outbound picking scenario
- QR-Code & barcode scanning using a head-mounted display

# SAP Internet of Things

## Product road map overview - key themes and capabilities

### Today

#### Platform

- HANA Cloud Platform as a PaaS and Extension Platform for Internet of Things (IoT) scenarios
- Wide range of IoT-related database and application services (e.g. analytical capabilities) in order to support industry specific scenarios
- Capabilities for device connectivity, device management and message handling (e.g. SAP HANA Cloud Platform IoT Services)

#### Applications

- SAP Predictive Maintenance and Service for remote condition monitoring
- SAP Networked Logistics Hub for Increased Turnover of goods and real-time in-transit visibility
- SAP Connected Manufacturing for Real-time visibility and control of shop floor operations\*
- SAP Vehicle Insights\*\* for Vehicle Analytics
- SAP Smart Business services for integrated KPI visualization & insights

#### Integration & Process Innovation

- Business process integration with SAP Enterprise Asset Management, Cloud for Customer and S/4HANA
- Mobile integration with smart devices (Augmented Reality)

(Q3 2015)

### Planned Innovations

#### Platform

- Leverage Cloud Foundry to take advantage of latest cloud and open source technologies (e.g. additional runtimes)
- Extended Big Data Platform, e.g. support of various databases, streaming capabilities
- Additional Data Centers in Japan and China
- Additional HCP platform services, e.g. gamification service
- Improved machine and device integration (IoT connector)
- High performance messaging service (MQTT support)

#### Applications

- Improved prediction and vibration analysis for rotating equipment
- SAP Asset Intelligence Network for shared equipment registry & improved collaboration between business partners
- Connected manufacturing for high speed automation
- Support of SAP Networked Logistics Hub in multiple industries with improved transparency & SCM integration
- Building and extending new applications based on powerful IoT application services
- New IoT scenarios, e.g. for utilities and other industries

#### Integration & Process Innovation

- Enhanced business process integration
- Leverage the power of the Business Network

### Future Direction

#### Platform

- Extended Availability of SAP HANA Cloud Platform
- Support for deployments in data centers of customers / partners
- Infrastructure based on OpenStack
- Additional services, e.g. Hadoop

#### Applications

- SAP Predictive Maintenance and Service extended with Predictive Spare Parts Management scenario support
- Digital Object Memory to support Track & Trace and Track and Assembly across the value chain
- Additional IoT Application Services and powerful IoT Application Builder
- New IoT Scenarios and Enhanced IoT applications
- Advanced analytics and predictions

#### Integration & Process Innovation

- Enterprise Marketplace / App store for IoT services
- Enable New Business Models like Product-as-a-Service

\* Shop floor integration / Industrie 4.0

\*\* Early Adoption

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Platform

## Cloud Foundry – Additional Runtimes

By leveraging Cloud Foundry, SAP HANA Cloud Platform will support additional runtimes (i.e. programming languages and frameworks) in SAP HANA Cloud Platform.

### Key capabilities

- Leveraging Cloud Foundry enables developers to choose from various programming languages and frameworks
- SAP supported buildpacks based on Cloud Foundry system buildpacks (Java, Node.js)
- Bring your own language (BYOL) with the support for custom buildpacks (e.g. PHP, Python, Ruby, Go)

### Benefits

- Full SAP support for the SAP supported languages and community support for all others
- Achieve more with your language of choice through BYOL

**Develop with other  
runtimes**

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Platform

## Extended Big Data platform - Smart Data Streaming

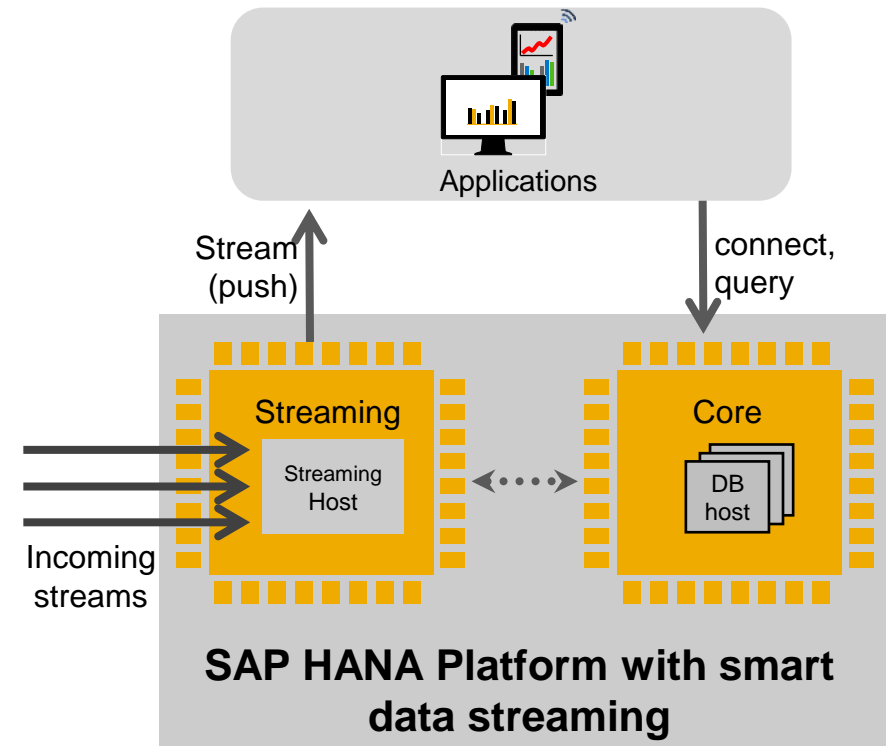

The SAP HANA smart data streaming option processes high-velocity, high-volume event streams in real time, allowing to filter, aggregate, enrich and analyze raw data before committing it to a database.

### Key capabilities

- Capture only the data you want, in the form you need it
- Combine raw events into actionable information
- Monitor incoming data
- Watch for trends, correlation, patterns, missing data
- Stream live updates to operational dashboards
- Generate alerts or notify applications to respond

### Benefits

- Process the data as fast as it arrives from devices and application
- Enrich, transform, filter before loading into the SAP HANA database
- Real-time situation detection for immediate response
- Administration via SAP HANA Studio and Cockpit

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Platform

## Additional data centers

**SAP HANA Cloud Platform will expand to additional data centers. We plan to invest into business continuity features and disaster recovery between the data centers within regions.**

### Additional data centers in Japan and China

- Tokyo and Osaka, Japan
- Shanghai, China

### Improvements for business continuity

- Use zero downtime maintenance feature to avoid bi-weekly maintenance windows (Remark: today, during these maintenance windows applications cannot be deployed and re-started, running applications are not affected)

### Disaster recovery data centers within regions

- St. Leon-Rot ⇔ Amsterdam
- Ashburn ⇔ Phoenix
- Tokyo ⇔ Osaka

**This is the current state of planning and may be changed by SAP at any time.**

# SAP Internet of Things - Platform

## Additional services - Gamification Service

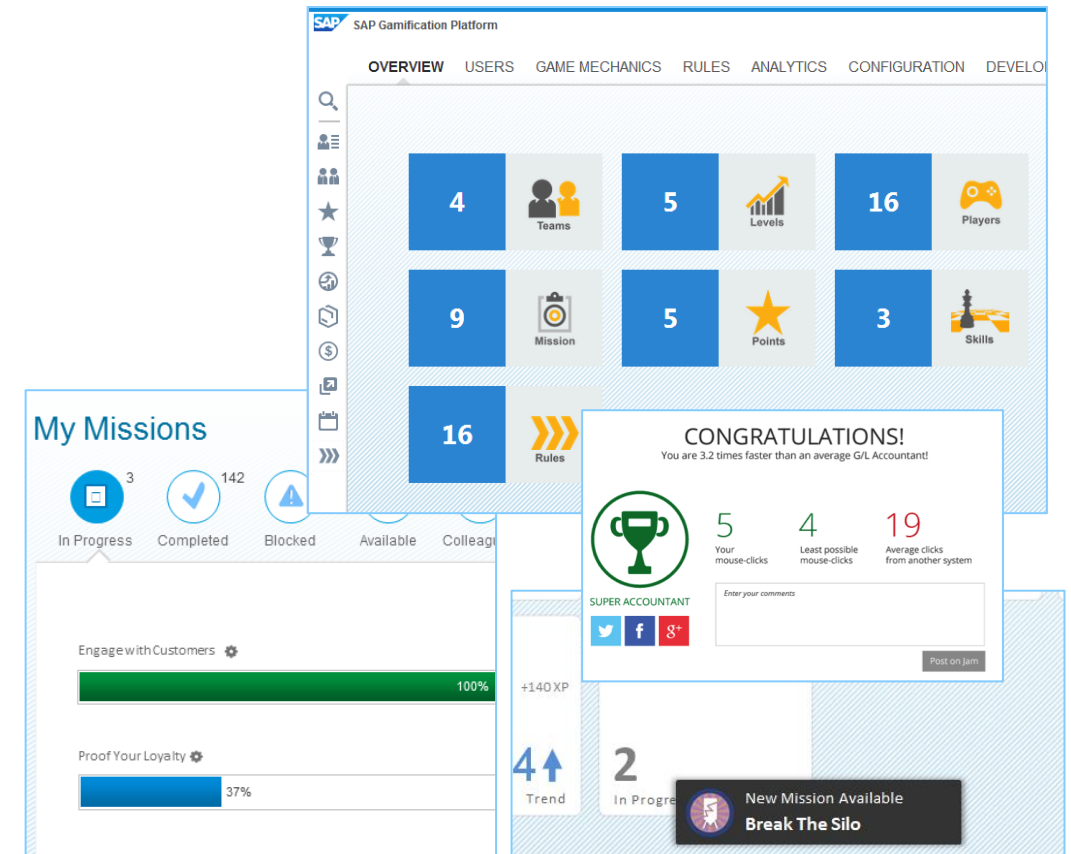

The SAP HANA Cloud Platform Gamification Service can be used to engage and motivate people with rewarding experiences.

### Key capabilities

- Easy integration of game events with Web API
- Implement complex game mechanics with web-based gamification workbench
- Outlook: full support of loyalty management & default content

### Benefits

- Engage users with real-time feedback on achievements
- Continuously improve the engagement during run-time via gamification analytics

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Platform

## SAP HANA Cloud Platform IoT Services

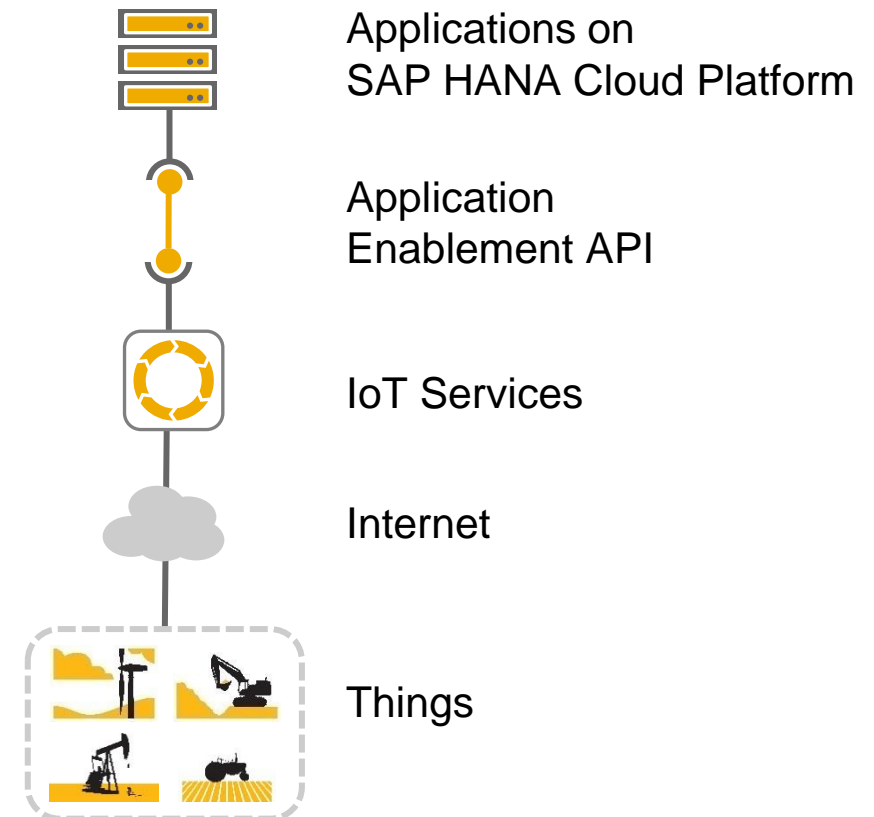

The SAP HANA Cloud Platform IoT Services can be used to connect devices to the HANA Cloud Platform in order to use data from these devices in applications.

### Key capabilities

- Improved remote device management, e.g. certificate based authentication
- Support of additional transport protocols, e.g. MQTT via integration with HCI messaging service
- Enhanced model authoring
- Integration with Smart Data Streaming
- SAP IoT connector for device connectivity and management with SDK

### Benefits

- Remote device management with heightened security
- Easier message management

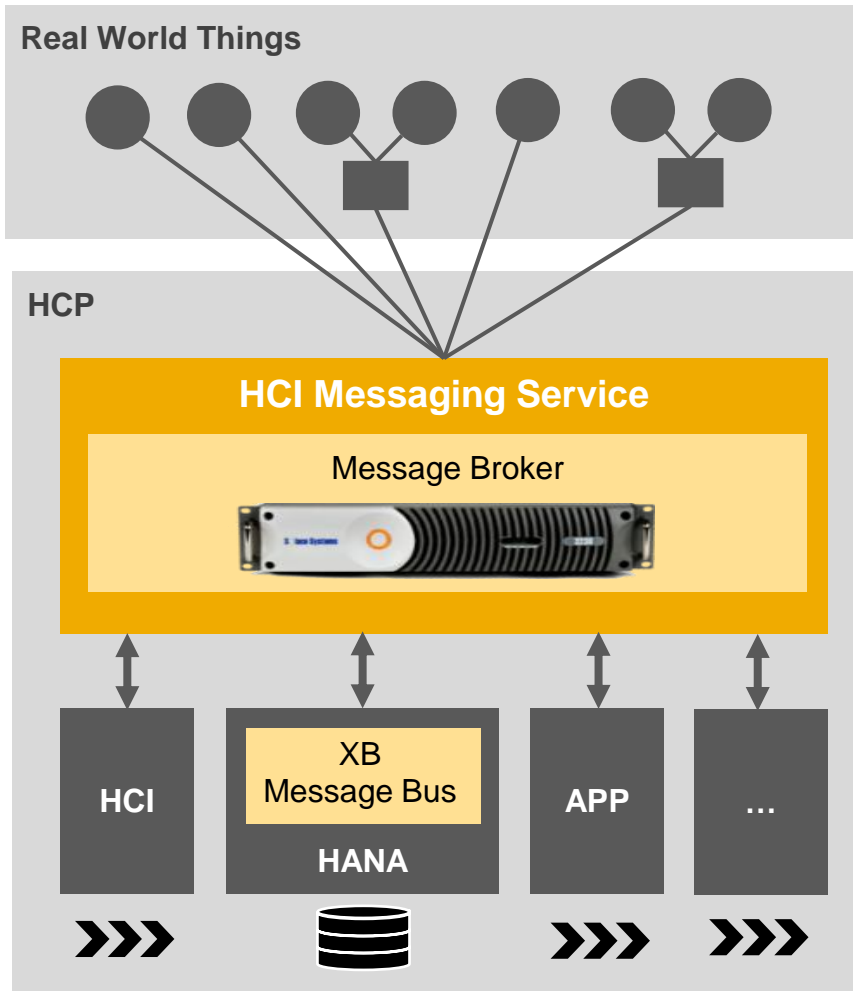

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Platform

## Integration with HCI Messaging Service

### Cloud-Based Messaging Service

- Highly, scalable and reliable messaging as a service
- Co-Innovation with Solace Systems
- Hardware-based message broker
- <http://www.solacesystems.com/press-releases/sap-selects-solace-for-high-performance-messaging-in-cloud>

### Key Characteristics

- Built-in virtualization concept
- Non-persistent and persistent messaging
- High Availability and Disaster Recovery

### XB Message Bus

- Message Inserter: fast-path message transport to HANA

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Applications

## SAP Vibration Analysis

### Automatic vibration analysis for rotating equipment

Vibration analysis is a condition monitoring technique that reveal valuable information about machine health – or impending failures

### Record vibrations

- Take high frequency snapshots of vibrations
- Calculate the vibration spectrum
- Determine threshold spectrum for automatic detection auf deviations

### Process automation

- Identify the relevant harmonics per component
- Automatically detect deviations per component
- Notify about detected defects

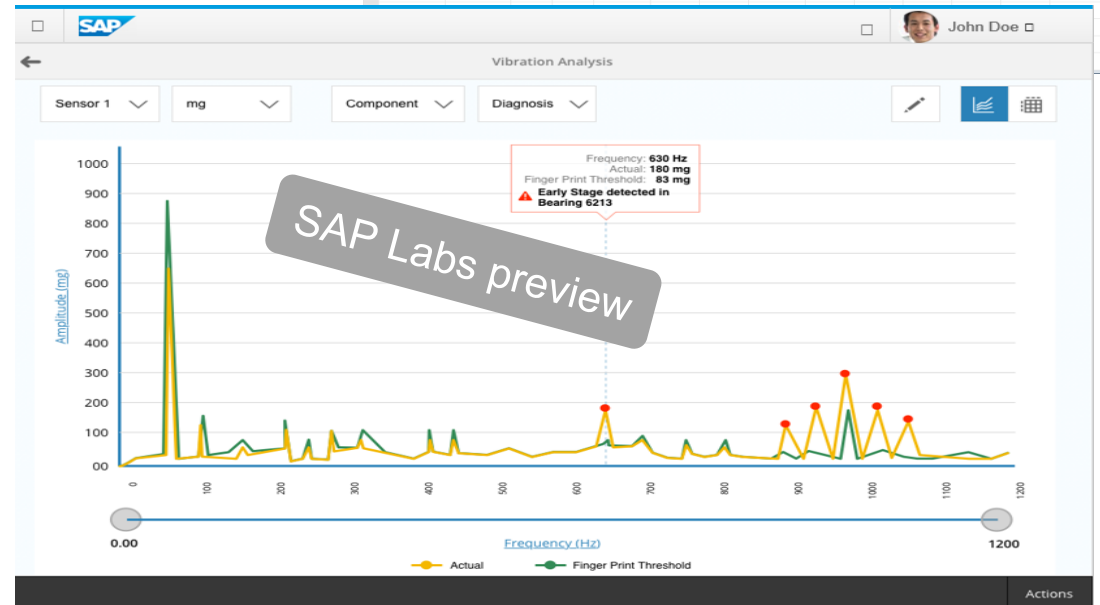

Vibration analysis helps a service engineer to pinpoint specifically the failure mode and identify which machine component is degrading.

Vibration Reporting and Diagnostics

Machine: 8008-048 Time Stamp: 2015-04-14 14:04:19 Spool Speed: 3151 Scroll Speed: 3350 Adjustment Window: 1 Analyze

Hierarchy View

Component Category	Part Number	Vibration Source	Status	Diagnosis	Actual Order	Expected Order	Harmonic Multiplier	Actual Amplitude	Design Threshold	Calculated Threshold	Design Threshold Variation	Calculated Threshold Variation	Spectrum	Resonance

# SAP Internet of Things - Applications

## SAP Asset Intelligence Network

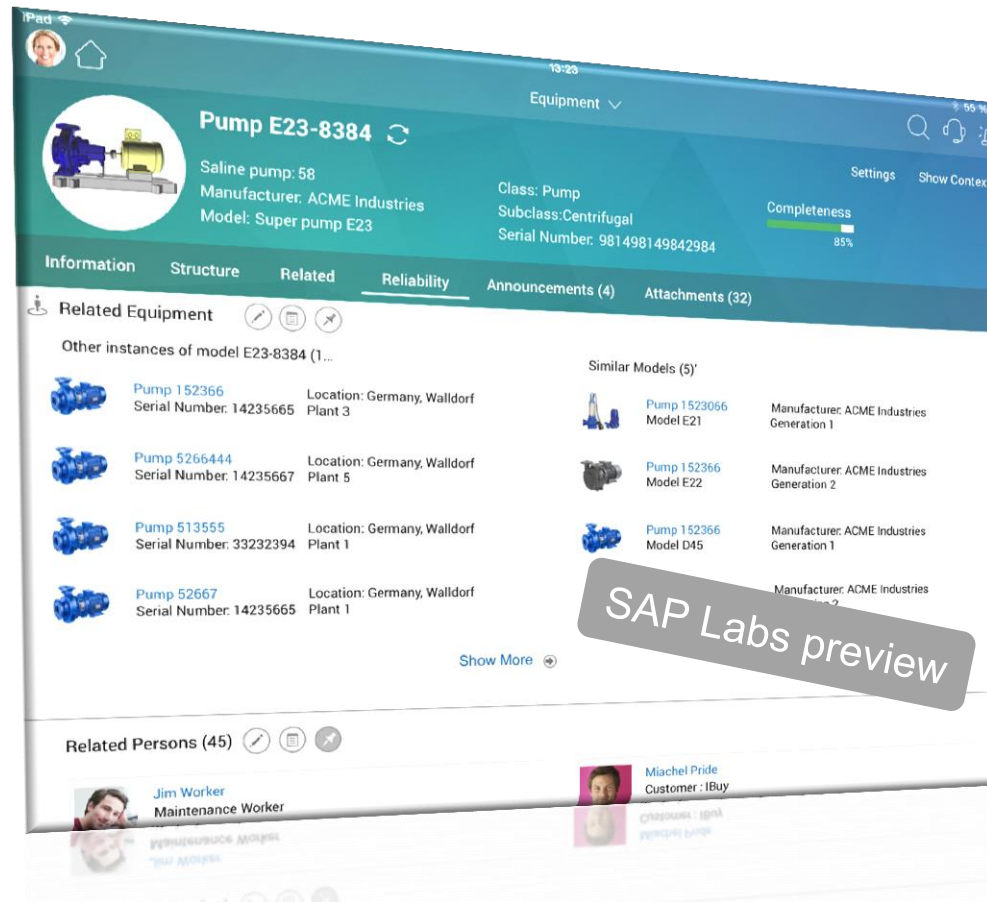

### Key Capabilities

#### Manufacturers can

- Centrally manage and publish information about models & equipment to selected audiences
- Establish Channel to Operators
- Build Installed Base Knowledge
- Gain Operation Insights / Access
- Push Communication & Alerts
- Sell Add-Value Services
- Connect SAP Predictive Maintenance and Service to multiple operators

#### Operators can

- Centrally register & subscribe for selected models & equipment
- Establish Channel to Manufacturers
- Use latest / reliable info in Operation & Maintenance
- Securely feed operation data
- Collaborate with Peers / Partner
- Enable New Business Models – consume equipment as a service

A cross industry network that brings together the manufacturers, services providers and operators of the worlds industrial assets to maximize value, improve efficiency and deliver new business models

### Target Customers

AIN is a cloud based Business Network bringing together the following types of customers:

**Operators:** Companies of various industries that buy, own and operate industrial and other assets

**Manufacturers:** Industrial Asset Manufacturers that design, produce, sell, commission and operate / service industrial assets

**Dealers & Service Providers:** Units that are operating close by the Operators and serving them with Sales & Services around

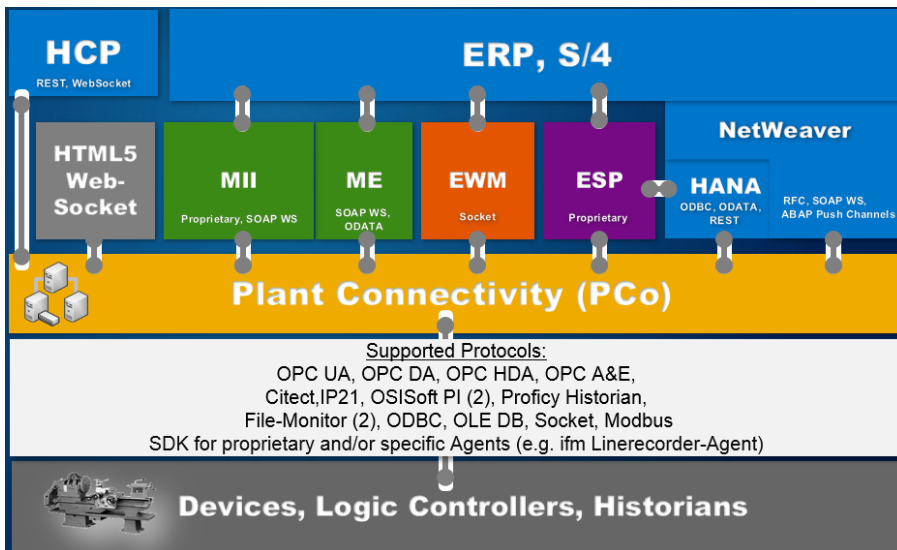

**Engineering & Construction:** Companies that are delivering engineering services from the design, construction and outsourced operations of the worlds assets.

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Applications

## SAP Connected Manufacturing

We plan to extend SAP Connected Manufacturing for High Speed Automation

Plant Connectivity (PCo) runs on Linux via Mono-Framework

PCo will strengthen the OPC UA footprint via providing an OPC UA Server (today, PCo is OPC UA Client)

MQTT enablement

New MTConnect Agent

Configure PCo via HTML5 UI

Enhanced Support of Pick&Place Machines

Extend buffer-mechanism beyond SAP Manufacturing Execution (ME) (e.g. application specific buffering of S/4 or HCP data in order to enable fast actions on machines)

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Applications

## SAP Networked Logistics Hub

### SAP Networked Logistics Hub

- SCL “Radar fences”
- Enhanced tour analytics
- UI enhancements

### Advanced Vehicle Tracking for Logistic Service Provider

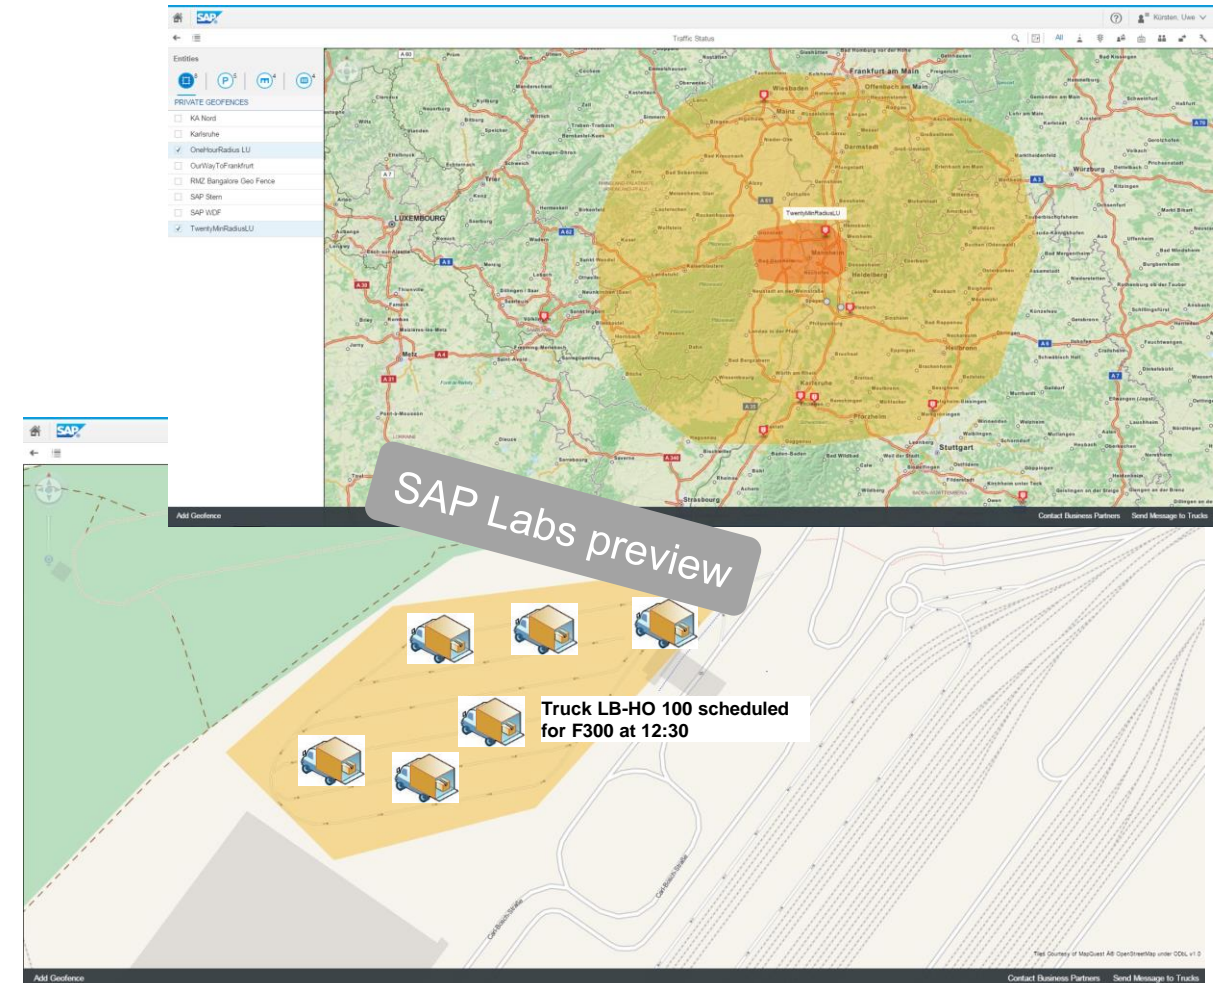

- Monitoring & alerting on tour execution based on customer requirements
- Integration with vehicle analytics / telematic data provider for monitoring & advanced analytics on truck performance

### Integration with SAP Event Management

- Interface for events based on truck geo locations (and geo fences)

### Integration with SAP Yard Logistics

- Interface for tour details, position data, Estimated time of arrival (ETA)

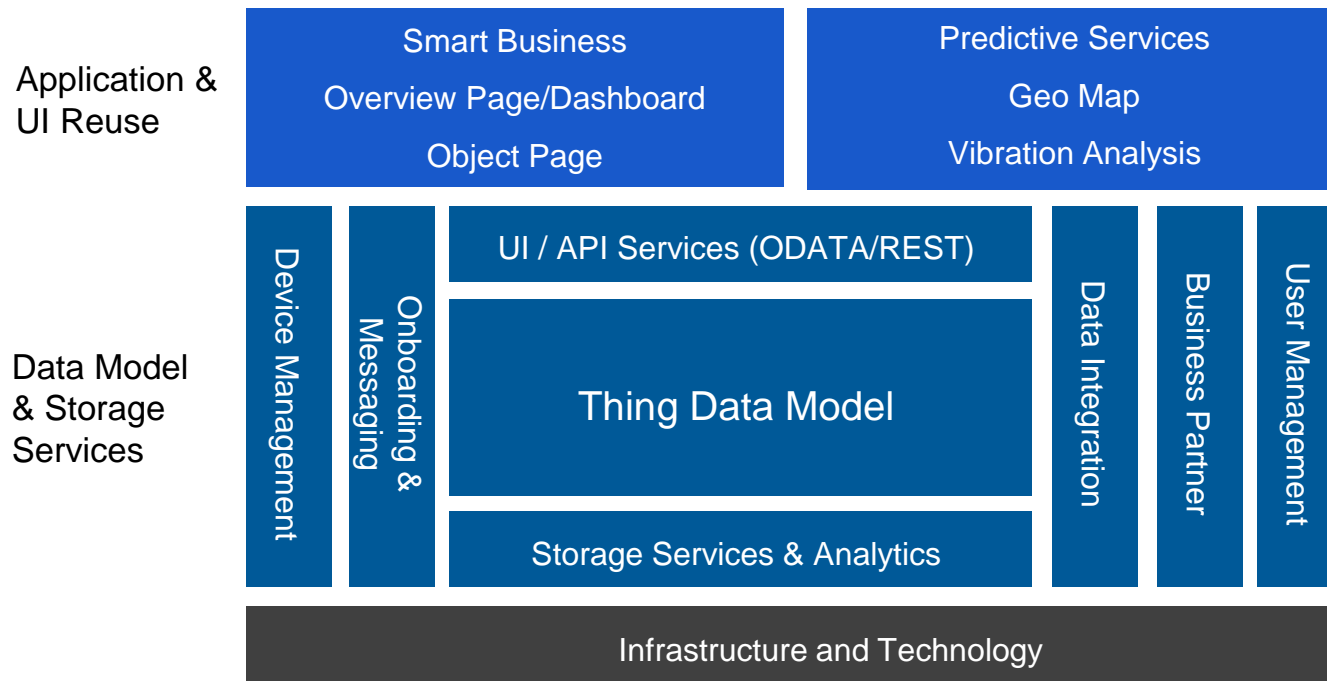

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Applications

## IoT Application Services

We plan to continuously make available new Application Services for IoT which allow increased efficiency for SAP, partners and customers in configuring and building new and differentiating IoT scenarios.

### Common Application Services:

- **Configuration:** Service to install configuration (metadata, customizing, ...)
- **Business Partner:** As known from the business suite (persons, groups, organizations)
- **Authorizations:** Authorization management
- **Common Services:** Share services and reuse entities such as countries, languages
- **Reuse UIs:** A set of reuse UIs such as Thing Properties, Thing Maps, Thing measurement chart, KPIs,...

### IoT-specific Services:

- **Metadata Services:** Services for the definition of a data model (e.g. things)
- **Data Services:** Services for access to data (e.g. things)
- **Persistence Services:** Storage services (e.g. HANA, Hadoop)

### Administrative Services:

- **User Management:** Management and onboarding of users

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things - Integration

## Integration and process innovation

---

**In the future we will improve existing and support additional integration use-cases. Particular focus will be on SAP S/4 HANA, Ariba, Fieldglass.**

### **Enhanced business process integration**

- Improve capabilities for end-to-end business processes between IoT and backend systems, like Cloud for Customer, ERP, S/4HANA

### **Leverage the power of the Business Network, such as FieldGlass, Ariba**

- Integrate IoT scenarios with the business network for increased and efficient collaboration between business partners.

**This is the current state of planning and may be changed by SAP at any time.**

# SAP Internet of Things

## Product road map overview - key themes and capabilities

### Today

#### Platform

- HANA Cloud Platform as a PaaS and Extension Platform for Internet of Things (IoT) scenarios
- Wide range of IoT-related database and application services (e.g. analytical capabilities) in order to support industry specific scenarios
- Capabilities for device connectivity, device management and message handling (e.g. SAP HANA Cloud Platform IoT Services)

#### Applications

- SAP Predictive Maintenance and Service for remote condition monitoring
- SAP Networked Logistics Hub for Increased Turnover of goods and real-time in-transit visibility
- SAP Connected Manufacturing for Real-time visibility and control of shop floor operations\*
- SAP Vehicle Insights\*\* for Vehicle Analytics
- SAP Smart Business services for integrated KPI visualization & insights

#### Integration & Process Innovation

- Business process integration with SAP Enterprise Asset Management, Cloud for Customer and S/4HANA
- Mobile integration with smart devices (Augmented Reality)

(Q3 2015)

### Planned Innovations

#### Platform

- Leverage Cloud Foundry to take advantage of latest cloud and open source technologies (e.g. additional runtimes)
- Extended Big Data Platform, e.g. support of various databases, streaming capabilities
- Additional Data Centers in Japan and China
- Additional HCP platform services, e.g. gamification service
- Improved machine and device integration (IoT connector)
- High performance messaging service (MQTT support)

#### Applications

- Improved prediction and vibration analysis for rotating equipment
- SAP Asset Intelligence Network for shared equipment registry & improved collaboration between business partners
- Connected manufacturing for high speed automation
- Support of SAP Networked Logistics Hub in multiple industries with improved transparency & SCM integration
- Building and extending new applications based on powerful IoT application services
- New IoT scenarios, e.g. for utilities and other industries

#### Integration & Process Innovation

- Enhanced business process integration
- Leverage the power of the Business Network

### Future Direction

#### Platform

- Extended Availability of SAP HANA Cloud Platform
- Support for deployments in data centers of customers / partners
- Infrastructure based on OpenStack
- Additional services, e.g. Hadoop

#### Applications

- SAP Predictive Maintenance and Service extended with Predictive Spare Parts Management scenario support
- Additional IoT Application Services and powerful IoT Application Builder
- New IoT Scenarios and Enhanced IoT applications
- Advanced analytics and predictions

#### Integration & Process Innovation

- Enterprise Marketplace / App store for IoT services
- Enable New Business Models like Product-as-a-Service

\* Shop floor integration / Industrie 4.0

\*\* Early Adoption

This is the current state of planning and may be changed by SAP at any time.

# SAP HANA Cloud Platform

## Future direction

Future  
Direction

### Additional Use Cases

- Support for additional use-cases based on requirements from customers and partners

### Infrastructure

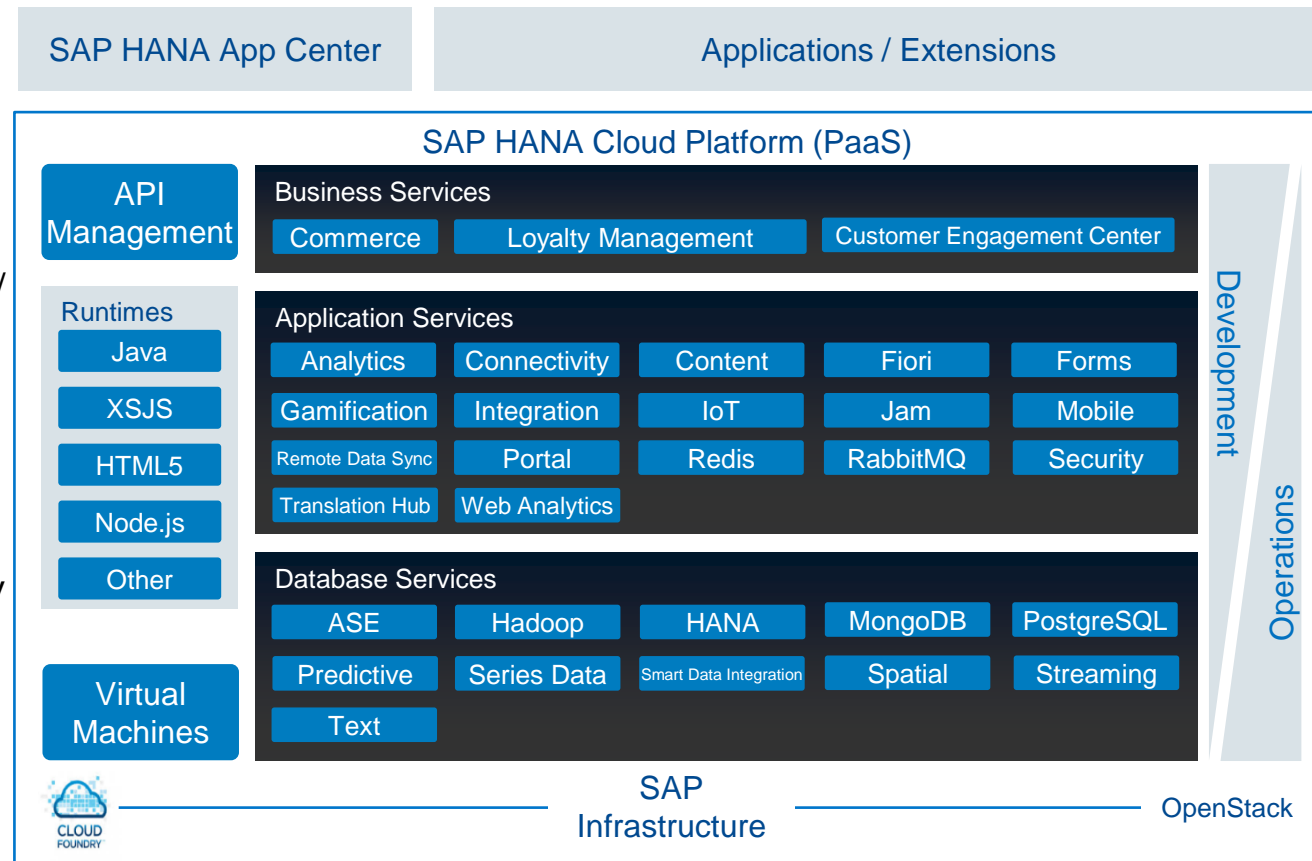

- Availability of SAP HANA Cloud Platform in all regions
- Support for deployments in data centers of customers / partners
- Infrastructure based on OpenStack

### Services

- Continuous improvements of existing services
- New services based on requirements from customers and partners (including Hadoop, Mail, Content Delivery Network)

### Development & Operations

- Runtime environment completely based on Cloud Foundry
- Support for additional use-cases based on requirements from customers and partners

Powered by **SAP HANA**

This is the current state of planning and may be changed by SAP at any time.

# SAP Internet of Things – Applications & Integration

## Future direction

### **New IoT Scenarios and Enhanced IoT applications, with Scenarios like**

- Predictive Consumables Planning for devices that require consumables like active filter minerals
- Predictive Spare Parts Planning: Reduce stock and improve your supply processes
- Emerging Issue Detection: Get alerts based on statistical insights
- Predictive Technician and Workforce Planning: Plan the right skill portfolio for you technicians and schedule them optimally
- Digital Object Memory to support Track & Trace and Track and Assembly across the value chain

### **New IoT application services for Internet of Things and a powerful IoT Application Builder**

### **Advanced Analytics and Predictions**

### **Enable New Business Models like Product-as-a-Service**

- Sell your devices based on their utilization, e.g. by cubic meters of earth moved
- Improve your customer's satisfaction and loyalty
- Calculate the utilization within IoT applications
- Integration into SAP CRM et. al. for charging and billing

### **Enterprise Marketplace / App store for SAP, customer and partner IoT services**

This is the current state of planning and may be changed by SAP at any time.

# Summary

**SAP Internet of Things enables customers to connect their machines and smart devices with a powerful IoT platform, analyze data in real time and leverage this information across the value chain to get new business insights. It enables customers and partners to build and run business applications in the cloud allowing end-to-end insight to action.**

Already today, SAP Internet of Things:

- provides powerful applications, integration scenarios and a wide range of platform services
- offers a standards-based development environment and embraces open source
- runs in SAP's certified tier-3 and 4 data centers in Germany, United States and Australia

In the future, SAP Internet of Things:

- will offer additional applications, industry scenarios and support additional use-cases
- will support additional runtimes as well as platform services (including open source services)
- will give customers and partners access to rich business services / APIs
- will be rolled out to more data centers and will support deployments in data centers of customers / partners

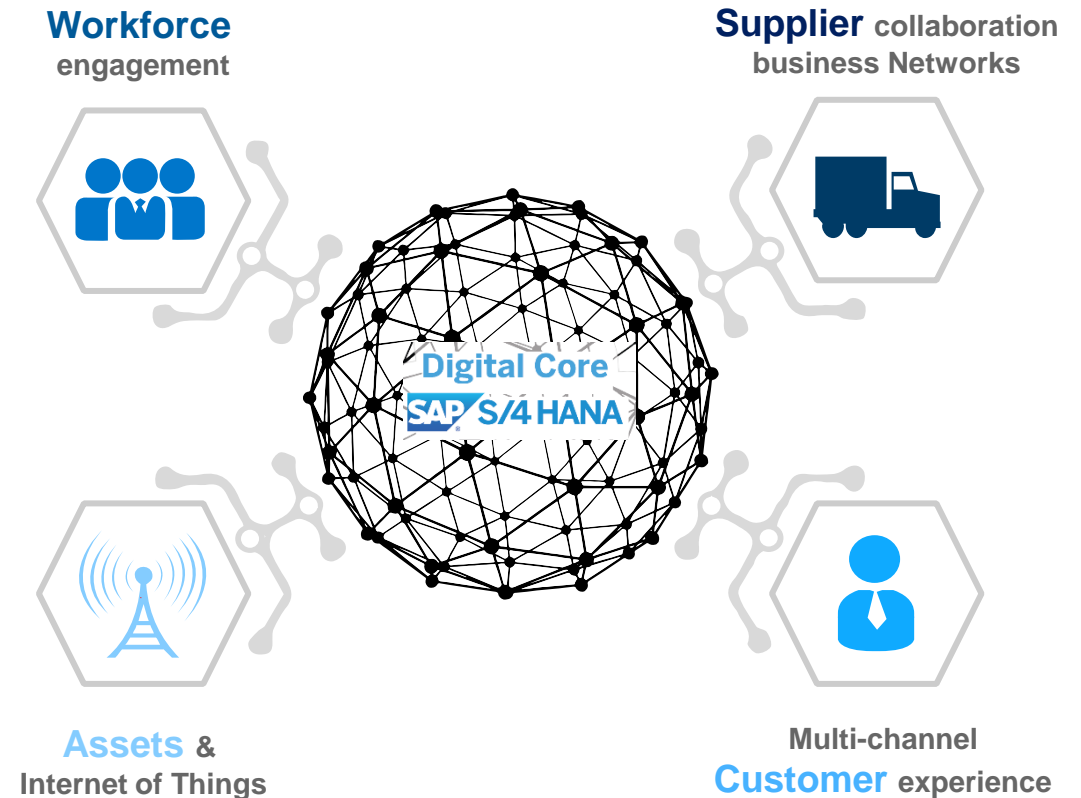

**This is the current state of planning and may be changed by SAP at any time.**

# Why SAP?

## SAP Internet of Things for Business

- **Seamless integration** with IT systems to make business sense of your sensor and machine data, from insight to action
- Big data analytics and **monitoring with SAP HANA** in-memory computing
- Fast time to value and low TCO by utilizing a big data IT architecture **in the cloud**
- **Ensure strong security standards** by relying your data to SAP's decades of expertise with IT security

This is the current state of planning and may be changed by SAP at any time.
