

**Vision for 8th Grade Math**

Mathematics courses at Uplift Education aim to build conceptual and procedural understanding of math through four components of instruction: **fluency, inquiry, communication, and real-world application**. The courses should balance explicit, direct instruction of skills and strategies with authentic opportunities for scholar inquiry and reflection. The end goal is to create life-long learners with strong communication and critical thinking skills, which they consistently apply to solve issues in their own local and global communities.

**Year at a Glance**

August	September	October	November	December	January	February	March	April	May	
SLA	1.Real Numbers	2.Equations and Inequalities	3.Similarity and Dilations	4.Proportional Relationships and Slope	Break	5.Geometry		STAAR Prep	6.Data Analysis	7.Financial Literacy

**Notes**

- **TIME FRAME:** Unit time frames are approximate and subject to change dependent on data and scholars' needs, as well as campus testing schedules.
- **TEKS:** All readiness TEKS are represented in bold text. Most supporting TEKS are represented where appropriate and deemed necessary.
- **MYP UP Stage 1:** Global contexts, key concepts, related concepts, and assessment criteria have been selected carefully to ensure Uplift meets IB requirements. If you choose to change any of these to personalize your units, please ensure you are assessing each global context, key concept, and related concept at least 1x per year and each assessment criteria at least 2x per year.
- **PERFORMANCE TASKS:** A minimum of 2 investigations and 2 real world projects are required. The first must be completed before Collaboration Day 2, and the second before the end of the year. You may choose to use the tasks detailed in the scope (indicated as investigations) or you may create your own, but the task must be assessed using MYP Criterion B, C, and D, depending on the assessment.

The unit also includes financial concepts involving loans, interest rates, investments and college finances.</i></p> <ul style="list-style-type: none"> <li>• Calculate simple and compound interest</li> <li>• Compare the effect of interest rates and length of a loan on the total cost of a loan</li> <li>• Discuss the benefits of various investments and compare investments to the cost of college               <ul style="list-style-type: none"> <li>○ Explain how investments grow over time</li> <li>○ Devise a savings plan for attending at least one year of college</li> </ul> </li> </ul>	<p>8.12A 8.12C <b>8.12D</b> 8.12G</p> <p><i>Bold = Readiness</i></p>	<p><b>Global Context</b> Personal and Cultural Expression</p> <p><b>Key Concept</b> Logic</p> <p><b>Related Concepts</b> Quantity Change System</p> <p><b>Statement of Inquiry</b> Actions taken in the present will impact your options in the future</p>	<p><b>Unit test (Criterion A)</b></p> <p><b>Recurring Performance Assessment (RPA) – Mandatory Uplift RPA scholar deadline during this unit.</b></p> <p><b>RPA: College and Career Project (Criterion C and D):</b> Scholars research college and the associated costs to attend. Then scholars will research and decide on both a college-required and noncollege-required career. Scholars will then create a written-piece of work describing the college and careers in addition to their rationale and mathematical reasoning for the path they hope to take.</p>	<ul style="list-style-type: none"> <li>• McGraw Hill Chapter 10</li> <li>• <a href="http://bizworld.org/">http://bizworld.org/</a></li> <li>• RTC department</li> <li>• Rice University RUSMP resources</li> </ul>

**Appendix A:**

**MYP MATH OBJECTIVES – YEAR 3**

<b>Criterion A: Knowing and Understanding</b>	<b>Criterion B: Investigating Patterns</b>	<b>Criterion C: Communicating</b>	<b>Criterion D: Applying mathematics in real-life contexts</b>
i. <b>select</b> appropriate mathematics when solving problems in both familiar and unfamiliar situations	i. <b>select</b> and <b>apply</b> mathematical problem-solving techniques to discover complex patterns	i. <b>use</b> appropriate mathematical language (notation, symbols and terminology) in both oral and written explanations	i. <b>identify</b> relevant elements of authentic real-life situations
ii. <b>apply</b> the selected mathematics successfully when solving problems	ii. <b>describe</b> patterns as relationships and/or general rules consistent with findings	ii. <b>use</b> different forms of mathematical representation to present information	ii. <b>select</b> appropriate mathematical strategies when solving authentic real-life situations
iii. <b>solve</b> problems correctly in a variety of contexts.	iii. <b>verify</b> and <b>justify</b> relationships and/or general rules.	iii. <b>move</b> between different forms of mathematical representation	iii. <b>apply</b> the selected mathematical strategies successfully to reach a solution
		iv. <b>communicate</b> complete and coherent mathematical lines of reasoning	iv. <b>explain</b> the degree of accuracy of a solution
		v. <b>organize</b> information using a logical structure.	v. <b>explain</b> whether a solution makes sense in the context of the authentic real-life situation.

**8<sup>th</sup> Grade TEKS**

**Mathematical Process Standards**

8.1A – apply mathematics to problems arising in everyday life, society, and the workplace	8.1B – use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem solving process and the reasonableness of the solution	8.1C – select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems	8.1D – communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate	8.1E – create and use representations to organize, record, and communicate mathematical ideas	8.1F – analyze mathematical relationships to connect and communicate mathematical ideas	8.1G – display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication
---	--	--	---	---	---	--

**Reporting Category 1: Numerical Representations and Relationships**

8.2A – Extend previous knowledge of sets and subsets using a visual representation to describe relationships between sets of real numbers.	8.2C – Convert between standard decimal notation and scientific notation.
8.2B – Approximate the value of an irrational number, including $\pi$ and square roots of numbers less than 225, and locate that rational number approximation on a number line.	<b>8.2D – Order a set of real numbers arising from mathematical and real-world contexts.</b>

**Reporting Category 2: Computations and Algebraic Relationships**

8.4A – Use similar right triangles to develop an understanding that slope, $m$ , given as the rate comparing the range in $y$ -values to the change in $x$ – values, $(y_2 - y_1)/(x_2 - x_1)$ , is the same for any two points $(x_1, y_1)$ and $(x_2, y_2)$ on the same line.	<b>8.5G – Identify functions using sets of ordered pairs, tables, mappings, and graphs.</b>
<b>8.4B – Graph proportional relationships, interpreting the unit rate as the slope of the line that models the relationship.</b>	8.5H – Identify examples of proportional and non-proportional functions that arise from mathematical and real-world problems.
<b>8.4C – Use data from a table or graph to determine the rate of change or slope and <math>y</math>-intercept in mathematical and real-world problems.</b>	<b>8.5I – Write an equation in the form <math>y = mx + b</math> to model a linear relationship between two quantities using verbal, numerical, tabular, and graphical representations.</b>
8.5A – Represent linear proportional situations with tables, graphs, and equations in the form of $y=kx$ .	8.8A – Write one-variable equations or inequalities with variables on both sides that represent problems using rational number coefficients and constants.
8.5B – Represent linear non-proportional situations with tables, graphs, and equations in the form of $y=mx+b$ , where $b \neq 0$ .	8.8B – Write a corresponding real-world problem when given a one-variable equation or inequality with variables on both sides of the equal sign using rational number coefficients and constants.
8.5E – Solve problems involving direct variation.	<b>8.8C – Model and solve one-variable equations with variables on both sides of the equal sign that represent mathematical and real-world problems using rational number coefficients and constants.</b>
8.5F – Distinguish between proportional and non-proportional situations using tables, graphs, and equations in the form $y=kx$ or $y=mx+b$ , where $b \neq 0$ .	8.9A – Identify and verify the values of $x$ and $y$ that simultaneously satisfy two linear equations in the form $y=mx+b$ from the intersections of the graphed equations.

**Reporting Category 3: Geometry and Measurement**

8.3A – Generalize that the ratio of corresponding sides of similar shapes are proportional, including a shape and its dilation.	<b>8.7C – Use the Pythagorean theorem and its converse to solve problems.</b>
---	---

8.3B – Compare and contrast the attributes of a shape and its dilation(s) on a coordinate plane.	8.7D – Determine the distance between two points on a coordinate plane using the Pythagorean Theorem.
<b>8.3C – Use an algebraic representation to explain the effect of a given positive rational scale factor applied to two-dimensional figures on a coordinate plane with the origin as the center of dilation.</b>	8.8D – Use informal arguments to establish facts about the angle sum and exterior angle of triangles, the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles.
8.6A – Describe the volume formula $V = Bh$ of a cylinder in terms of its base area and its height.	8.9A – Identify and verify the values of $x$ and $y$ that simultaneously satisfy two linear equations in the form $y=mx+b$ from the intersections of the graphed equations.
8.6C – Use models and diagrams to explain the Pythagorean Theorem.	8.10A – Generalize the properties of orientation and congruence of rotations, reflections, translations, and dilations of two-dimensional shapes on a coordinate plane.
<b>8.7A – Solve problems involving the volume of cylinders, cones, and spheres.</b>	8.10B – Differentiate between transformations that preserve congruence and those that do not.
<b>8.7B – Use previous knowledge of surface area to make connections to the formulas for lateral and total surface area and determine solutions for problems involving rectangular prisms, triangular prisms, and cylinders.</b>	<b>8.10C – Explain the effect of translations, reflections over the <math>x</math>- or <math>y</math>- axis, and rotations limited to <math>90^\circ</math>, <math>180^\circ</math>, <math>270^\circ</math>, and <math>360^\circ</math> as applied to two-dimensional shapes on a coordinate plane using an algebraic representation.</b>
	8.10D – Model the effect on linear and area measurements of dilated two-dimensional shapes.
<b>Reporting Category 4: Data Analysis and Personal Financial Literacy</b>	
8.5C – Contrast bivariate sets of data that suggest a linear relationship with bivariate sets of data that do not suggest a linear relationship from a graphical representation.	8.12A – Solve real-world problems comparing how interest rates and loan length affect the cost of credit.
<b>8.5D – Use a trend line that approximates the linear relationship between bivariate sets of data to make predictions.</b>	8.12C – Explain how small amounts of money invested regularly, including money saved for college and retirement, grow over time.
8.11A – Construct a scatterplot and describe the observed data to address questions of association such as linear, non-linear, and no association between bivariate data.	<b>8.12D – Calculate and compare simple interest and compound interest earnings.</b>
8.11B – Determine the mean absolute deviation and use this quantity as a measure of the average distance data are from the mean using a data set of no more than 10 data points.	8.12G – Estimate the cost of a two year and four year college education, including family contribution, and devise a periodic savings plan for accumulating the money needed to contribute to the total cost of attendance of at least the first year of college.
