Sears Marketplace API Guide

Overview

This guide provides information on how to connect to the Seller Portal to pull and update orders as issued by Transform SR Holdings Management LLC (“TSHM”) and its affiliates for all sellers that participate in the Sears Marketplace Program. This includes merchandise for TSHM or its affiliates, including merchandise which TSHM or its affiliates is providing for its or their divested entities. Websites that sell merchandise from the Sears Marketplace include, but are not limited to: Sears.com, Kmart.com and ShopYourWay.com.

All purchase orders pulled using this API are governed by the [Sears Marketplace Terms and Conditions](#) and the [Sears Marketplace Vendor Information Guide](#).

If you have any questions related to any customer-specific questions such as customer address verification or validation of order quantities for Sears.com purchase orders, send an email to member email provided on the purchase order.

If you have questions general questions related to order fulfillment requirements, please view the knowledge articles on our website: <https://marketplace.sears.com>.

This guide assumes you have knowledge of the Marketplace as well as experience fulfilling orders using the Seller Portal. For additional information on requirements and standards for the Sears Marketplace Program, please refer to the [Sears Marketplace Vendor Information Guide](#) (“VIG”).

Additional Marketplace Guides

[Sears Marketplace Vendor Information Guide](#)

What is XML?

XML stands for extensible markup language. A markup language is a set of codes, or tags that describes the text in a digital document. XML makes it possible to conduct complex business over the Internet. XML was designed to store and transport data. XML was designed to be self-descriptive – meaning an individual or business will define what tags are used in files that are exchanged within their system.

Note: This is not a tutorial on using or understanding XML. For more information about using XML, see the [W3C XML Tutorial](#).

Why use XML?

XML allows sellers or an aggregator on a seller’s behalf, to integration with Sears Marketplace’s Seller Portal. A system can communicate to our system using a predefined set of APIs (Application Programming Interfaces) to get documents, like a purchase order, or put a document, like a shipment notice on the Seller Portal. Once XML integration is set up and fully tested, little intervention is required.

Sears Marketplace API Guide

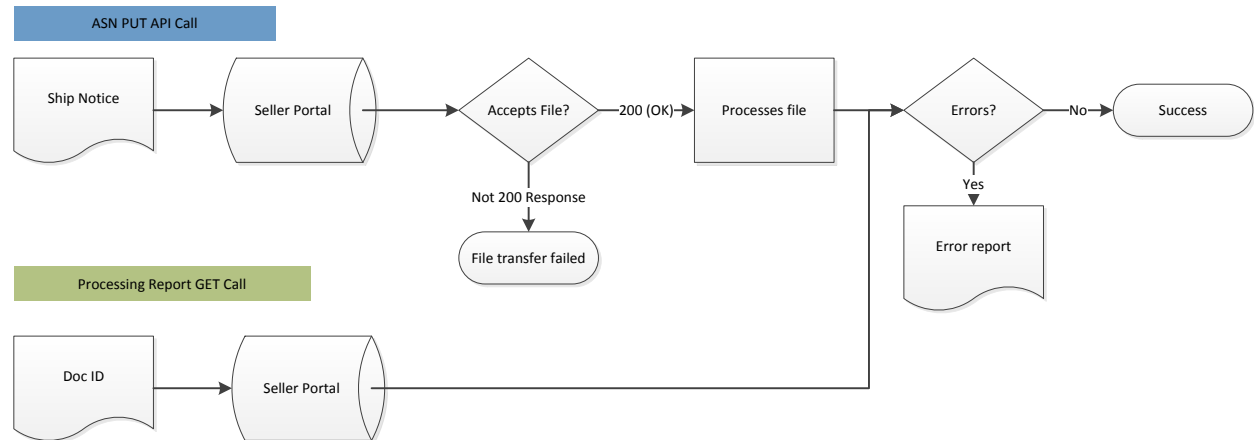

Using Sear Marketplace APIs for XML Integration

Each API has an associated schema file or XSDs (XML Schema Definitions). These are explained in detail in this document. Each API is associated with putting files (PUT) onto the server or getting files (GET) from the server.

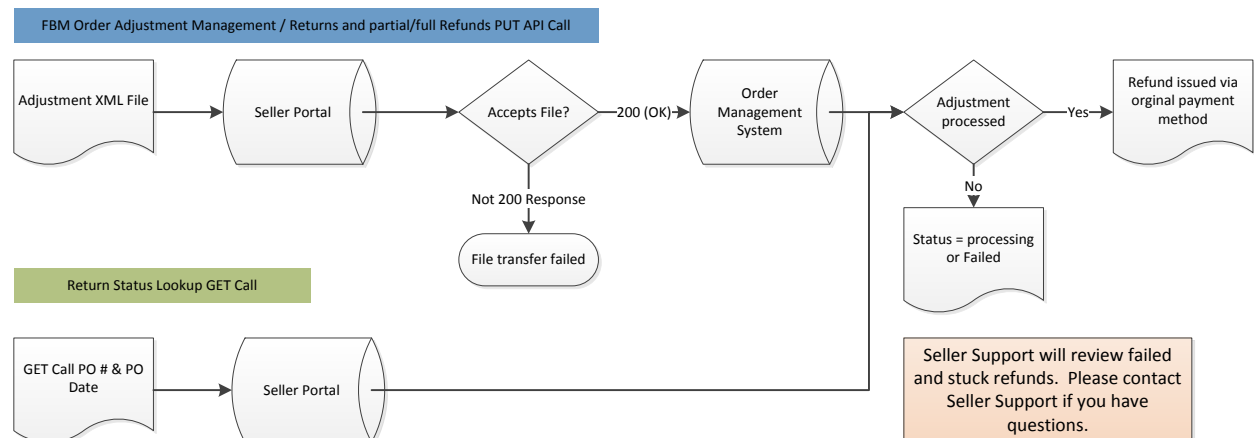

When sending files to the Seller Portal, there is a multi-step process to confirm the file was accepted and processed without any errors. A “200 (OK)” response from the API call only means we accepted the file and does not mean that we processed the file without any issues.

PUT calls require a follow up call using the doc ID using the processing report. For returns and refunds, there is a separate call to ensure that the return/refund was processed in our order management system. The below flow diagram illustrates the system flow.

Example of the end-to-end PUT API flow for ASNs

Example of the end-to-end PUT API flow for Returns/Refunds

Sears Marketplace API Guide

Credentials and Authentication

All associated PUT/GET APIs require the use of a HMAC-SHA256 signing algorithm. As of March 31, 2016, we changed our authentication protocols and removed email and passwords in API URLs. All calls will include only your seller ID. Any call done with old API calls that include an email / password, will be rejected. API calls require a keyed-hash message authentication code mechanism.

The format of the authorization header would be: HMAC-SHA256<white space>emailaddress=<email address>,timestamp=<timestamp>,signature=<signature>

As an example, “authorization:HMAC-SHA256 emailaddress=test@searshc.com,timestamp=2016-02-11T20:23:05Z,signature=bf4ece266c47538d793b296fa772e9ea299611c6c6e48841f4e66a4f994bed26”

How to create a new signature

The new signature algorithm needs two inputs:

1. String to Sign
2. Secret Key

“String to Sign”:

The format to generate this will be: **Seller id:Emailaddress: CurrentTimestamp**. For example, if the “String to Sign” string is: 1234:test@searshc.com:2016-02-11T20:23:05Z

- Seller ID = seller’s account id in Seller Portal
- Email address = their actual email address that sellers pass in their API calls
- CurrentTimestamp = the current time stamp in UTC time zone with format “yyyy-MM-dd’T’HH:mm:ss’Z”.

The time stamp will be valid only for 30 minutes at the server side which means a generated signature can only be used for 30 minutes after which the signature again needs to be created using the current time stamp. The timestamp passed in the request is validated against the configured expiry time.

Secret Key:

Every seller will be provided with a base64 encoded secret key. Sellers can log into Seller Portal to generate their key from their “Account Info” page. (Once logged in, click on your name in the upper right and then Account Info.)

If you do not have access to the Seller Portal, please contact your company administrator for the Seller Portal. If you do not know who your company administrator is, please contact us using the Contact Us Form on <https://marketplace.sears.com/support>.

Create a new signature

Sellers could use any programming language APIs to create this signature.

Sellers will have to pass the signature in Hexadecimal format in the API header.

Sears Marketplace API Guide

For reference, use this URL: <http://www.freeformatter.com/hmac-generator.html> – “Select a message digest algorithm” SHA256.

Once the request reaches Seller Portal server, we will validate the signature provided by the seller using the inputs provided to authenticate the API calls.

Secondary users must generate their own API key when logged into the Seller Portal.

General error handling

Working errors requires identification of errors. Common errors are preventable and easily fixed. Errors during processing may be based due to malformed XML files creating an utter failure or may be caused during processing by the Seller Portal. These types of errors would occurred if loading the same data via the bulk Excel file templates as well.

Throughout this guide you see this note:

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Consistently using the Processing Report API and working the errors, is a best practice.

Common errors are explained in our knowledge base here:

<https://marketplace.sears.com/seller-support/error-messages/>

Additional error messages and their explanations may be found here:

<https://marketplace.sears.com/seller-support/category/products-and-inventory/item-creation/item-build-errors/>

One common error is sending inventory, pricing or order prep time, etc. updates before an item has been successfully created. A message like “Cannot update ‘a pricing’ of the item with id ‘ABC’ because it doesn’t exist” will be received. You need to go back to the item creation process and correct any item errors in order to get the item created successfully before sending additional updates for that item.

API Limits

In order to allow access to all sellers and maintain a stable platform, the Seller Portal has the following limits on the number of files that can be sent within an hour.

Limits by Type

API / File Type	Files allowed in 1 hour
Catalog	600
Pricing	120

Sears Marketplace API Guide

Inventory	360
Order Prep Time/Lead Time	100
Order updates (returns/cancellations/refunds)	200
ASN/Shipment Updates	300
Manual Invoice	20

Limits by IP Address

A single IP address may “ping” our APIs up to 500 times per minute. This includes both PUT & GET calls. If your IP address exceeds 500 requests per minute, your IP address will be throttled for 15 minutes. You will receive an error “rate limited”. After 15 minutes, you may continue to send calls.

Errors received

If you receive a 403 error, you will need to wait 60 minutes from the time of the first API call to continue. Example, if a seller has posted over 600 catalog files from 11:05 to 11:58, they will need to wait until 12:05 to post the next catalog request.

Remittance Info Report API Version 8

Shipping Commission field was added

2021.04.15

Service Item APIs Version 1

A new feature on Sears Marketplace was released that enables sellers to offer delivery and installation services for certain categories of products. Categories may include appliances, electronics, fitness equipment, etc which are typically LTL shipped / delivered. Through this feature, invited sellers will be able to offer various delivery services including curbside, in-home delivery, installation and haul-away services based on product category. Sellers will be able to offer variable pricing for each of these services in the 48 contiguous states based on zip code and availability. This API will allow sellers to provide the zip codes and cost related to service type.

Sears Marketplace API Guide

Sandbox Environment

The Seller Portal Sandbox environment is a replica of our existing production environment. The majority of our standard APIs can be used and tested in this sandbox environment without impacting existing items and orders.

Gaining Access to the Sandbox

To gain access to the sandbox, for security reasons you will need to self-register your account in our sandbox by doing the following:

1. Go to <https://sellersandbox.sears.com/SellerPortal/d/index.jsp>
2. Click on the “Sign up” button under Sell on Sears
3. The registration process is a replica of what was done when you originally signed up for Sears Marketplace.

Note: When registering, please use the same email address used to register and the same FEIN or Social Security Number that is on your existing Sears Marketplace account. You do not have to use valid credit card or bank account information though during this process, but will still need to provide a 16 digit fake card number.

4. Once you click the “Create my Account” button you will receive an email from “The Sears Marketplace Team” <marketplace_noreply@transformco.com> with the subject line “Sears Marketplace Account Authentication Required- Sandbox”.
5. Click the link in the email to activate your account.
6. You will be taken to the Seller Portal Sandbox login screen, you must login to continue.
7. Next you will need to complete all the pages in the account set up workflow. As noted above, you do not have to use valid credit card or bank account information though during this process. If you’re unsure of what to place in the all the pages, please refer to the information that is in your Seller Portal account settings.
8. Once you submit for approval, you will get an email with the subject “Sears Marketplace account setup is complete- Sandbox”. We will still need to verify your account and approve it.
9. Go to <https://marketplace.sears.com/support> and click on the Contact Us button. Use message topic “Accounts” and Subtopic “Sandbox Activation Request”. On this form use your production seller ID and in the message include the sandbox seller ID. **If you don’t do this step, your sandbox account may not be activated.**
10. Once we active your account, you will receive an email with the subject “Sears Marketplace - Your account is activated- Sandbox”. Your sandbox account is active and ready to be used for testing!

How to use the sandbox

The sandbox is designed to test APIs so not all features of Seller Portal work in the Sandbox (i.e. Reporting). For security it is a blank slate and no items are copied from your production account. You will need to follow the below steps to get data in your sandbox account to test the APIs but once you’ve set up items, they are they to test all future API updates.

Sears Marketplace API Guide

1. Build items using the API, UI or bulk upload templates
2. Provide inventory quantities to the items using the APIs, UI, or bulk upload templates. Set the inventory high enough so you won't have issue with running out of stock when generating test orders.
3. Use the Create Purchase Order API to generate test orders on your Sandbox account. This must be done via an API, there is no mechanism in the UI to generate sample POs.
4. Now, you can test the order management and shipment notifications, etc.

What APIs are available in the Sandbox?

- Export Seller Information API
- Export Item class API
- Export Attribute Library API
- Item Management
- Inventory Management
- Pricing Management
- Competitive Pricing API
- Order Prep Time/Lead Time Management (Item level) services
- Create Purchase Order API
- Get Purchase Order API
- ASN/Shipment Updates Management
- Order Cancellations Management
- Order Adjustment / Return Management
- Export Order Adjustment Details API

Not supported in the sandbox are:

- Customer Cancellation APIs

Sandbox API URLs

When using the production APIs, the URL changes slightly: <https://seller.marketplace.sears.com> becomes <https://sellersandbox.sears.com>. For example:

<https://sellersandbox.sears.com/SellerPortal/s/schema/rest/attribute/export/v2/attribute-library.xsd>

Create Purchase Order API

This API call uses the PUT method to create purchase order. Using the below parameters, you build the URL that uses PUT method to create a purchase order(s).

NOTE: This API allows sellers to enter up to 5 external item ids which must be coma separated. For example, if request consists two external item ids, 2 Order lines would be created for each external product Id. 'multipleLinesFlag' allows sellers to create multiple order lines which would help sellers to test partial returns/cancellations/shipments.

Param Name	Required	Description	Type	Default
email	Yes	Email address	String	None
password	Yes	Password	String	None
externalItemId	Yes	external product Id	String	None
multipleLinesFlag	No	multiple line flag to create multiple order lines	String	false/no

Sears Marketplace API Guide

Param Name	Required	Description	Type	Default
poDate	No	can enter purchase order date	String YYYY-MM-dd	Current timestamp
shippingAddressName	No	Customer name		
shippingAddressLine1	No	The address line to which you will send product.	String	Randomly picked from the list.
shippingAddressCity	No	The address city to which you will send product.	String	Randomly picked from the list
shippingAddressState	No	The address state to which you will send product.	String	Randomly picked from the list.
shippingAddressPostalCode	No	The address postal to which you will send product.		Randomly picked from the list.

Sample PUT URL:

<http://sellersandbox.sears.com/SellerPortal/api/sandbox/oms/createpo/v1?sellerId={sellerId}&externalItemId={externalItemId}>

Sandbox PUT URL for order with single item:

<http://sellersandbox.sears.com/SellerPortal/api/sandbox/oms/createpo/v1?sellerId={sellerId}&externalItemId={externalItemId}>

Sandbox PUT URL with the multipleLinesFlag to create 1 purchase order with 4 items with a specific PO date:

<http://sellersandbox.sears.com/SellerPortal/api/sandbox/oms/createpo/v1?sellerId={sellerId}&externalItemId={item1ID},{item2ID},{item3ID},{item4ID}&quantity={qty}&poDate={YYYY-MM-DD}&multipleLinesFlag=true>

Sandbox PUT URL to create a purchase order with 1 items, specified quantity, specific PO date, and specific shipping address:

<http://sellersandbox.sears.com/SellerPortal/api/sandbox/oms/createpo/v1?sellerId={sellerId}&externalItemId=item1&quantity=1&poDate=2015-06-24&shippingAddressName=John Doe&shippingAddressLine1=123 Ave&shippingAddressCity=San Francisco&shippingAddressPostalCode=94002&shippingAddressState=CA&multipleLinesFlag=false>

Catalog Management

There are 5 steps to building an item.

1. Identify a listing item class.

Review the Item Class Commissions Table and figure out which item class your item(s) are associated with. If you have trouble finding the correct item class or do not see one that fits your items please browse Sears.com to find the similar item to see which item classes the item is listed.

Sears Marketplace API Guide

Use the Item Class Library API listed below to get the list of available item classes.

2. **Discover details of the listing item class** by fetching a list of attributes and attribute values applicable for that item class.

Attributes and values will become applicable in step 3 but it is good to note that these attribute values 1) increase your listings ability to be found in search and browse; 2) add depth to your listing, giving the customer more information; 3) may be require depending on the item class and attribute; and 4) are required if building listings as variation (so customer can pick size, color, etc.)

Use the Attribute library API for this step.

3. **Build up an XML message**

Structure your XML according to the XSD and sample XML. As noted in the XSD and sample some fields are required and other fields are optional, though the optional fields greatly enhance your product and its search ability. Note that it is important to use the tags in the correct order as specified in the sample and XSD.

Use the Item Management API for this step and step 4.

4. **Test the message**

Remove any special characters and check if your XML elements are in the correct sequential order. Do a HTTP PUT with content-type ?application/xml? to the URL:

<https://seller.marketplace.sears.com/SellerPortal/api/catalog/fbm/v25?sellId={sellerId}>

Use a browser plug-in (like Poster) to check if your XML will be accepted by our system. A 200 OK response means that your feed is good. A 400 Bad Request response means your feed needs to be fixed. To find the exact error, use a tool (like XMLLINT) to validate your XML against our XSD.

5. **Review your processing report**

Fetch the processing report for the upload. The above upload should return a document ID.

Check the processing report using HTTP GET:

<https://seller.marketplace.sears.com/SellerPortal/api/reports/v1/processing-report/{document-id}?sellerId={sellerId}>

Item Class Library

This API call uses the GET method to populate attribute library. The data will be populated in XML format.

Similar information is available via the Seller Portal report “Item Class Commissions Table”. Log into the Seller Portal, browse to Products > Product Mgmt > Bulk and click on the “Item Class Commissions Table” to download. This download will provide all item class ids and if UPCs are required.

Sears Marketplace API Guide

Feed version 2

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/itemclass/export/v2/itemclass-library.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/itemclass/export/v2/itemclass-library.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/itemclasses/v2?sellerId={sellerId}
Possible Responses	200 OK: body contains a list of available item classes used to classify items in Seller Portal

Note: Version 1 is still supported.

Attribute Library

This API call uses the GET method to populate attribute library. The data will be populated in XML format.

Parameters: itemClassId: (required) Item class id from the item class library retrieval service.

The list of available itemClassId can be retrieve by pulling the item class library API or by logging into the Seller Portal, browse to Products > Product Mgmt > Bulk and click on the “Item Class/Attributes Mapping (for Generic Template)” link.

Feed Version 4 released 2014.09.10

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/attribute/export/v4/attribute-library.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/attribute/export/v4/attribute-library.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/attributes/v4/?itemClassId={}&sellerId={}
Possible Responses	200 OK: body contains a list of available attributes for the requested item class.

Item Management

This API call uses the PUT method to create, update, and remove items from your catalog. The data that is uploaded during the PUT call must be XML data.

Feed Version 25 release 2018.10.31

What’s different? We added an elements “prop65-warning”, “prop65-warning-code-type”, “package-has-prop65-label” and “prop65-warning-text” to support California Proposition 65 labeling.

For the element “prop65-warning-code-type” there are 3 possible options. Please see the documentation within the XSD file for more information.

Sears Marketplace API Guide

XSD**	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/catalog/import/v25/lmp-item.xsd
Sample XML**	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/catalog/import/v25/lmp-item.xml
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/catalog/fbm/v25?sellerId={}
Possible Responses	200 OK: Upon successful processing, seller item updates will be published.

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Feed Version 24 release 2017.07.12

What's different? We removed the MRSP field

XSD**	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/catalog/import/v24/lmp-item.xsd

Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/catalog/fbm/v24?sellerId={}
Possible Responses	200 OK: Upon successful processing, seller item updates will be published.

Note: Version 22 is still valid. Version 23 was skipped for general release. Previous versions before 22 of this API have been deprecated.

Feed Version 22 release 2017.04.12

XSD**	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/catalog/import/v22/lmp-item.xsd
Sample XML**	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/catalog/import/v22/lmp-item.xml
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/catalog/fbm/v22?sellerId={}
Possible Responses	200 OK: Upon successful processing, seller item updates will be published.

Item Management using Sears Catalog

Sellers may use the Sears Catalog to create an item offer in the Seller Portal. This is done by providing a minimum set of item data which can be used to find the content that already exists in our catalog. It's a two-step process: 1) use the PUT method to send skinny data to the Sears servers and 2) use the GET method to confirm if the items to confirm if the item matched the Sears catalog and an offer was created or if the item did not match and the item must be built using the standard item listing protocols.

Sears Marketplace API Guide

FBM Skinny Item Import

The following API call uses the PUT method to create, update, and remove content-less items from your catalog.

It is strongly suggested that you use UPC to match as the majority of our item categories require a UPC on the item. Your chances to match will increase when using UPCs.

Feed Version 1

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/contentless-offers/import/v1/skinny-fbm.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/contentless-offers/import/v1/skinny-fbm.xml
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/catalog/skinny-fbm/v1?sellerId={sellerId}
Possible Responses	200 OK: Upon successful processing, seller item updates will be published.

Note: After a successful posting of the XML file, use the Content Match Processing Report API to verify if the items matched.

Content Match Processing Report

This API call uses the GET method to request a report with status of content item match.

Feed Version 1

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/reports/export/v1/content-match-report.xsd
Sample XML	None available
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/reports/contentMatch/v1?sellerId={}&fromDate={fromDate}&toDate={toDate}&processStatus={processStatus}&approvalStatus={approvalStatus}
Possible Responses	200 OK: Upon successful processing, seller item updates will be published.

Inventory Management

This API call uses the PUT method to manage the inventory level of your items. The data that is uploaded during the PUT call must be XML data. To avoid errors, inventory updates should only be made to items that have successfully processed through the Item Management API or manually via a sub-category template upload.

There are 2 different APIs that are available for use and your account type determines which one is needed. FBM Inventory Management and FBM-LMP Inventory Management.

Sears Marketplace API Guide

All newer accounts are set to FBM-LMP by default and should use this API. Older accounts that have been using the FBM Inventory Management API will need to continue to use this API unless their account is enabled for FBM-LMP. If you are not sure, please contact seller support via our contact us form to confirm if your account is set up for LMP.

Feed Version 7 released 2015.04.15

For FBM-LMP sellers

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/inventory/import/v7/store-inventory.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/inventory/import/v7/store-inventory.xml
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/inventory/fbm-lmp/v7?sellerId={}

Note: Any previous versions are NOT supported.

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

For FBM sellers

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/inventory/import/v7/inventory.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/inventory/import/v7/inventory.xml
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/inventory/fbm/v7?sellerId={}

Note: Any previous versions are NOT supported.

When sending a date/time stamp in any XML file, **you must base these time stamps on Central Time zone**. Otherwise, inventory will be updated in the future as our servers are configured for Central Time.

The only exception is the date/time stamp used in the user authentication which is UTC.

Inventory 1x1 Inbound API

The majority of all inventory updates should use the above APIs, we do allow individual items to be updated on-demand. This would potentially be used when an item goes out of stock and an update for only that item needs to be sent.

Feed Version 1

For FBM-LMP sellers

Sears Marketplace API Guide

<https://seller.marketplace.sears.com/SellerPortal/api/inventory/1x1/fbm-lmp/v1?sellerId={}&itemId={}&locationId={}&onHand={}&pickUpNowEligible={}&inventoryTimestamp={}&lowInvThreshold={}>

For FBM sellers

<https://seller.marketplace.sears.com/SellerPortal/api/inventory/1x1/fbm/v1?sellerId={}&itemId={}&onHand={}&inventoryTimestamp={}&lowInvThreshold={}>

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Inventory Export

This API call uses the GET method and allows users to pull the current inventory numbers that are listed in the Seller Portal.

Feed version 5 released 2015.04.15

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/inventory/export/v5/item-inventory-public.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/inventory/export/v5/item-inventory-public.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/inventory/v5?sellerId={}&programType={} https://seller.marketplace.sears.com/SellerPortal/api/inventory/v5?itemIds={}&sellerId={}&programType={} https://seller.marketplace.sears.com/SellerPortal/api/inventory/v5?locationId={}&sellerId={}&programType={} https://seller.marketplace.sears.com/SellerPortal/api/inventory/v5?itemIds={}&locationId={}&sellerId={}&programType={}

Parameters:

- itemIds: (optional) comma separated list of up to 25 individual items
- locationId: (optional) the ID of the location for which to pull inventory
- programType: "FBM" ("FBS" is no longer supported)

Tip: To find Location ID: <https://marketplace.sears.com/seller-support/location-id/>

Possible Responses:

200 OK: body contains inventory for all items or the specified items (if itemIds is specified); broken down by locations. If account is non-LMP, the inventory will be provided only for warehouse-location-id and the pick-up-eligible-flag will be false for this.

Sears Marketplace API Guide

Pricing Management

This API call uses the PUT method to update the pricing of existing items. The data that is uploaded during the PUT call must be XML data.

To avoid errors, price updates should only be made to items that have successfully processed through the item management API or manually via a sub-category template method.

Feed Version 6 release 2017.07.12

What's different? Changes to this feed relate to the msrp tag and how it functions. The msrp tag was removed.

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/pricing/import/v6/pricing.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/pricing/import/v6/pricing.xml
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/pricing/fbm/v6?sellerId={}

Please note: Versions 4 & 5 are still supported, but if the msrp tag is passed, it will not be stored and used.

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Order Management

FBM Purchase Order Management

This API call uses the GET method to request for details of purchase orders placed on Sears.com and related sites for an individual seller.

There is no way to only pull orders that you haven't pulled yet. You will need to create some logic to prevent duplicates. "PO number" can be recycled. We use a field 'po-number-with-date' that would be unique.

Feed Version 19 release 2022.12.15*

Anticipated Release date. A notification confirming the release will be sent the week of the anticipated release.

What's new? Additional fields added.

- lease-order: Y or N. Identifies if an orders was purchased via a lease and is tax exempt

XSD**	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/export/v19/purchase-order.xsd
Sample XML**	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/export/v19/purchase-order.xml

Possible Responses	200 OK: Application populates the orders in an XML
Common Fields XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/shared/oms/common-fields-v18.xsd

Feed Version 15 release 2019.10.30

What's new? Additional fields added.

- tax-remitted-to-seller: Sears Marketplace will charge, collect, and remit applicable state and local sales and use taxes for all orders shipped to customers in certain states in the table listed at <https://marketplace.sears.com/seller-support/sales-and-use-tax-policy/>. When tax is remitted on behalf of the seller as per the state law, this will show 'N'.
- total-order-value: added to clarify value of the order
- item-class-id: added to capture which item class the item was in at the point of the sale.
- total-shipping-tax: Previously, the total shipping and handling included shipping tax. This has been split out to be reported separately.

Sears Marketplace API Guide

- tax-certificate-url (added in V14): When an order is purchased via a lease, the sales tax is collected and remitted by the leasing agent. The leasing agent is a reseller hence they collect the tax on the item and remit it to the state authorities directly. The sales tax will be charged to the member but it will not be remitted to the sellers. Instead, a tax-exempt certificate will be available via a URL for each order purchased with a lease. For more information see: <https://marketplace.sears.com/seller-support/marketplace-leasing/>

Possible Responses	200 OK: Application populates the orders in an XML

Note: Feed versions 11 & 12 are still available for use but not all the tax fields and return statuses would be available.

Sears Marketplace API Guide

FBM Order Cancellations

Feed Version 1

This API call uses the PUT method to send order cancellation requests (in XML format). API accepts full cancellation at line level (no quantity level) and below is the allowed cancellation reasons:

- "DISCONTINUED-ITEM"
- "OUT-OF-STOCK"
- "CUSTOMER-CHANGED-THEIR-MIND"
- "WRONG-ITEM-WAS-ORDERED"
- "LEAD-TIME-IS-TOO-LONG"
- "ITEM-FOUND-SOMEWHERE-ELSE"
- "INVALID-METHOD-SHIPMENT"
- "INVALID-ITEM-SKU"
- "OTHER"

 Using "OTHER" as a cancellation code will deem an order as a seller initiated cancellation. It's important to take the time to map to correct cancellation codes. If you are unsure of how to map your cancellation codes, please reach out seller support via the contact us form.

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/import/v1/order-cancel.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/import/v1/order-cancel.xml
Production PUT URL	<a "="" href="https://seller.marketplace.sears.com/SellerPortal/api/oms/order/cancel/v1?sellerId={}">https://seller.marketplace.sears.com/SellerPortal/api/oms/order/cancel/v1?sellerId={}
Possible Responses	200 OK: Application accepted seller cancellation requests

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Customer Cancellation API Management

This API should be used to identify orders that a member requested to be canceled via our self-service cancellations process in the online order center.

Feed Version V1 released 2014.11.19

Includes an optional tag: customer-cancellation-warning at line level. Current versions will continue to be supported

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/export/v1/order-cancellation-request-to-seller.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/export/v1/order-cancellation-request-to-seller.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/cancellationrequest/v1?sellerId={sellerId}&status={status}&fromdate={fromdate}&todate={todate}}
Possible Responses	200 OK: Application accepted seller cancellation requests

Sears Marketplace API Guide

FBM Order Adjustment Management / Returns and partial/full Refunds

This API call use the PUT method adjust orders or to mark an order as returned.

Refunds and Returns

- A seller will be able to issue iterative partial refunds of item price fulfilled orders at line item level and/or shipping charge at order level through Seller Portal.
- Return will be accepted with or without restocking fee.
- This API accepts order refunds and returns.

Ensure you review our sample files for different scenarios. To issue an adjustment, in other words, to refund part of the original amount, one needs to use the <refund> sections. To issue a return, at full or partial value, you need to use the <return> sections.

Adjustments cannot be made on an order that has been marked as “returned”. Seller Portal will accept a refund file but the order management system will reject the refund and it will fail to process.

Multiple order adjustment requests can be send in a single xml file.

Feed Version V5 released 2019.03.13 (updated 2019.10.30)

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/import/v5/order-adjustment.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/import/v5/order-adjustment-v5.xml Also see scenarios below V4
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/order/adjustment/v5?sellerId={d}
Possible Responses	200 OK: Populates seller adjustment details for the given query parameters

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Additionally, check the status of the refund via the [Refund Status Lookup API](#) to ensure the refund processed successfully.

What's new?

Reason Description “Shipping charge” added. Any shipping charge being refunded must use this in order to correctly refund any associated shipping tax charges.

```
<xs:simpleType name="adjustment-reason-type-shipping">
  <xs:restriction base="xs:string">
    <xs:enumeration value="Shipping Charge"/>
  </xs:restriction>
</xs:simpleType>
```

Sears Marketplace API Guide

Feed Version V4 released 2017.05.24

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/import/v4/order-adjustment.xsd
Sample XML	See scenarios below
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/order/adjustment/v4?sellerId={d}
Possible Responses	200 OK: Populates seller adjustment details for the given query parameters

This version will be deprecated.

Scenarios for V4 & V5:

Refund – member keeps the item and a partial or full refund is given

Sample XML:

<https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/import/v2/order-adjustment-for-price-refund.xml>

Note that the <refund> tags are used.

Return – member returned the item and partial or full refund is given after receiving the item back at the warehouse.

Sample XML:

<https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/import/v2/order-adjustment-for-return.xml>

Note that the <return> tags are used and that <return-amount> is within this section.

If an approved restocking fee is accessed, that should be deducted from the <return-amount>.

Shipping Refund – a refund of part or all of the shipping cost if shipping was charged.

See sample for V5. You must include the <shipping-adjustment> section. “Shipping Charge” must be used starting in V5. Note, there should only one shipping adjustment for the whole order. It cannot be done at the line level.

Refund Status Lookup

Once a refund/adjustment request is sent to the Seller Portal, the Seller Portal then sends the request to the order management system. The actual refund is processed in the order management system. While processing, the return status will show in the Seller Portal or may be queried using this GET URL. After processes, the status will show if the refund was “completed” or the request “failed”. Failures occur for several reasons including a return or refund already having been issued.

Sears Marketplace API Guide

Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/orderadjustment/v3?sellerId=XXXX&ponumber=XXXX&podate=XXXX-XX-XX

```

FBM Order Returns Management

As part of the self-service model that was released in 2016, members may log into their order center and request a return from a seller. There are two parts of this API set: 1) Customer Order Return GET –

Sears Marketplace API Guide

gets the member requests and 2) FBM Order Returns Response – responds to the member to provide the return label and authorization to return the product. For more information about this process, please see our [FAQ pages](#).

Customer Order Returns GET

This API call uses the GET method to identify orders that the customer requested a return.

Seller can query the GET request with one of the following statuses or date range.

1. PENDING - Awaiting for Seller response.
2. AUTHORIZED - Seller authorized the return request and uploaded the return label.
3. REJECTED - Seller rejected the return request.

Feed Version V1 released 2016.01.13

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/export/v1/order-return-request-to-seller.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/export/v1/order-return-request-to-seller.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/returnsrequest/v1?sellerId={}&status=PENDING&fromdate=yyyy-MM-dd&todate=yyyy-MM-dd
Possible Responses	200 OK: Populates seller adjustment details for the given query parameters

FBM Order Returns Response

This API call uses the PUT method to receive AUTHORIZED/REJECTED responses for customer returns requests from sellers. If returns request is authorized, This API uploads return label as base64Binary encoded format.

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/import/v1/order-returns-response-from-seller.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/import/v1/order-returns-response-from-seller.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/returnsresponse/v1?sellerId={}&status=PENDING
Possible Responses	200 OK: Populates seller adjustment details for the given query parameters

FBM ASN/Shipment Updates Management

Feed Version V7 released 2015.10.28

This feed is a shared API and is also used by Sears Market Place.

In Version 7 we will update the XSD to not specify the shipping-carrier and shipping-method within the schema. This will allow addition or subtraction of carriers and shipping methods without having to

Sears Marketplace API Guide

update the API version. In conjunction to this update, we will provide a service to retrieve all possible carriers and the associated shipping methods.

ASNs are validated for correct tracking numbers patterns and valid carriers and associated shipping methods. ASNs will be rejected if 1) the tracking number does not follow the correct logic for a given carrier; 2) the carrier code on the ASN is not listed in our system or 3) valid carrier is used but a shipping method that is not associated with a carrier is used. Please use the Shipping Carrier and Shipping Method List Service to find all valid carrier codes and their associated shipping method. Please see the section on [ASN Rejection Email Alerts](#) for more information on how and when we send email alerts out.

This API call uses the PUT method to receive FBM ASN/Shipment update requests (in XML format) from Sellers.

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/import/v7/asn.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/import/v7/asn.xml
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/asn/v7?sellerId={sellerId}
Possible Responses	200 OK: Application accepted seller ASN update requests

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Sample XML for multiple packages for 1 line item

It is common if one line contains more than the quantity 1, that 2 or more packages are needed to be shipped to the member. You must combine include both tracking numbers in a single shipment notification. If you send two shipment notifications, Seller Portal will only accept the first shipment notification, mark the 1 item as shipped correctly, but will auto-cancel the balance of the line. In order to avoid this, you must send a single shipment notification for the entire order line. An example of a single line item with quantity 2 and 2 tracking numbers is shown below.

```
<?xml version="1.0" encoding="UTF-8"?>
<shipment-feed xmlns="http://seller.marketplace.sears.com/oms/v7"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://seller.marketplace.sears.com/oms/v7 asn.xsd ">
  <shipment>
    <header>
      <asn-number>0029505407</asn-number>
      <po-number>0318880</po-number>
      <po-date>2017-12-18</po-date>
    </header>
    <detail>
      <tracking-number>666187493338459</tracking-number>
      <ship-date>2017-12-18</ship-date>
      <shipping-carrier>FDE</shipping-carrier>
      <shipping-method>GROUND</shipping-method>
      <package-detail>
        <line-number>1</line-number>
```

Sears Marketplace API Guide

```

</shipment-feed>

```

Shipping Carrier and Shipping Method List

Feed Version 1 released 2015.10.28

As this is a shared API with our Marketplace, we list all our available carriers and the associated shipping methods.

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/export/v1/shipping-carrier.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/export/v1/shipping-carrier.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/shipping-carrier/v1?sellerId={sellerId}
Possible Responses	200 OK: Application accepted seller ASN update requests

Order Prep Time / Lead Time

Feed Version 3

This API call uses the PUT method to manage the order prep time/lead time of your items.

To avoid errors, order prep time updates should only be made to items that have successfully processed through the Item Management API or via a sub-category template upload. For warehouse locations the 'units' must be in days; for pickup locations the 'units' can be days, hours, or minutes.

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/sopt/import/v3/item-sopt-details.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/sopt/import/v3/item-sopt-details.xml
Production PUT URL	https://seller.marketplace.sears.com/SellerPortal/api/sopt/import/v3?sellerId={sellerid}
Possible Responses	200 OK: Application accepted seller ASN update requests

Sears Marketplace API Guide

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Installation Services

Service Item API

Invited sellers may offer delivery and installation services for certain categories of products. Through this feature, sellers will be able to offer various delivery services including curb-side, in-home delivery, installation and haul-away services based on product category. Sellers will be able to offer variable pricing for each of these services in the 48 contiguous states based on zip code and availability. This API will allow sellers to provide the zip codes and cost related to the four service types.

For more information regarding this please see: <https://marketplace.sears.com/question/how-to-set-up-service-items/>

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/catalog/import/v1/service-item.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/catalog/import/v1/service-item.xml
Production PUT URL	http://seller.marketplace.sears.com/SellerPortal/api/catalog/service-item/v1?sellerId={sellerID}
Possible Responses	200 OK: Application accepted file

We will use one API to create/update/delete/inactive service item & zip code based pricing.

Note: After a successful posting of the XML file, use the Processing Report API with the associated doc ID to verify if the file processed correctly or any errors occurred.

Tags Dictionary

Element	Description
Item	This tag will use to create a service item in the Seller Portal
item-id	For example, for installation for dishwashers, use the same Item ID for all the zip codes for a given service. Example INSTALL_DISHWASHER
item-class-id	Service Item class Id
zipcode	This field is a text field in order to keep leading 0s in the zip codes. Remember that this price is the same for all the items in the item class.
Id	Zipcode value
price	Make sure to use the right format for pricing. Both dollar and cents must be used. For example, \$1 should be 1.00. Free should be 0.00.
status	true = zipcode & price is active

Sears Marketplace API Guide

	false = zipcode & price is inactive
Items-to-delete	Used for items that seller wants to delete. Such items are pulled down from .com sites and will be purged after 90 days.
Items-to-inactivate	Used for items that seller decides to pull down (temporarily) from the site but might want to reactivate in future.

Q: Regarding items-to-delete and items-to-deactivate parameters in the request payload - how do these work?

items-to-delete tag is to be used for items that seller wants to delete. Such items are pulled down from .com sites and will be purged after 90 days.

items-to-inactivate tag is to be used for items that seller decides to pull down (temporarily) from the site but might want to reactivate in future.

Q: The xsd file that they are 2 dimensional arrays of strings - what data should go in each array?

Use item ids of items that you want to delete/deactivate. This would be similar to how you can send items to delete from a catalog.

Q: What scenarios might you expect a seller to deactivate service item configurations over just deleting them entirely?

Here's a real life example that we've already seen. A seller had to temporarily discontinue installs in the state of Utah due to driver shortages. So they deactivated the zip codes instead of the deleting them. Once the driver shortage is resolved by their carrier, they will turn them back on.

Q: For the zipcode-price pairs, is there a limit on how many can be sent at once?

No limit

Example

```
<?xml version="1.0" encoding="UTF-8"?>
<catalog-feed xmlns="http://seller.marketplace.sears.com/catalog/v1"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:schemaLocation="http://seller.marketplace.sears.com/catalog/v1
../../../../rest/catalog/import/v1/service-item.xsd">
<service-catalog>
<items>
  <item>
    <item-id>DD_INSTSampleItem3</item-id>
    <item-class-id>1213610</item-class-id>
    <zipcodes>
      <zipcode>
        <id>00501</id>
        <price>14.99</price>
        <status>true</status>
      </zipcode>
    </zipcodes>
  </item>
</items>
</service-catalog>
</catalog-feed>
```

Sears Marketplace API Guide

```

        </zipcode>
        <zipcode>
        <id>00544</id>
        <price>12.99</price>
        <status>>true</status>
        </zipcode>
        <zipcode>
        <id>06001</id>
        <price>11.00</price>
        <status>>false</status>
        </zipcode>
    </zipcodes>
</item>
</items>
<items-to-delete>
    <item-to-delete>
        <item-id>DD_INSTSampleItem1</item-id>
    </item-to-delete>
</items-to-delete>
<items-to-inactivate>
    <item-to-inactivate>
        <item-id>DD_INSTSampleItem2</item-id>
    </item-to-inactivate>
</items-to-inactivate>
</service-catalog>
</catalog-feed>

```

Reports

Remittance Report REST API

Feed Version V9 released 2022.12.15*

Anticipated Release date. A notification confirming the release will be sent the week of the anticipated release.

What's new? lease-order: Y or N. Identifies if an orders was purchased via a lease and is tax exempt

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/export/v9/remittance-response.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/export/v9/remittance-response.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/remittance/v9?sellerId={}&fromdate={}&todate={}
Possible Responses	200 OK: Populates remittance info for the given query parameters

Feed Version V8 released 2021.09.23

What's new? shipping-commission field was added

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/export/v8/remittance-response.xsd

Sears Marketplace API Guide

Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/export/v8/remittance-response.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/remittance/v8?sellerId={}&fromdate={}&todate={}
Possible Responses	200 OK: Populates remittance info for the given query parameters

Feed Version V7 released 2019.10.30

What's new? New fields added to support leasing program and help quickly identify if tax is remitted to the seller.

- tax-remitted-to-seller: Sears Marketplace will charge, collect, and remit applicable state and local sales and use taxes for all orders shipped to customers in certain states in the table listed at <https://marketplace.sears.com/seller-support/sales-and-use-tax-policy/>. When tax is remitted on behalf of the seller as per the state law, this will show 'N'.
- tax-certificate-url (added in V14): When an order is purchased via a lease, the sales tax is collected and remitted by the leasing agent. The leasing agent is a reseller hence they collect the tax on the item and remit it to the state authorities directly. The sales tax will be charged to the member but it will not be remitted to the sellers. Instead, a tax-exempt certificate will be available via a URL for each order purchased with a lease. For more information see: <https://marketplace.sears.com/seller-support/marketplace-leasing/>

Sears Marketplace API Guide

Possible Responses	200 OK: Populates remittance info for the given query parameters
--------------------	--

Feed Version V5 released 2013.02.06

This feed is a shared API and is also used by Sears Market Place.

This API call uses the GET method to request information on payment credited to seller's account for orders within in a time frame designated by the seller.

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/oms/export/v5/remittance-response.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/oms/export/v5/remittance-response.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/oms/remittance/v5?sellerId={}&fromdate={}&todate={}
Possible Responses	200 OK: Populates remittance info for the given query parameters

Removed Item REST API

Feed Version V1 released 2013.11.13

This feed is a shared API and is also used by Sears Market Place.

This API call uses the GET method to request information about removed items designated by the seller.

XSD	https://seller.marketplace.sears.com/SellerPortal/s/schema/rest/reports/export/v1/removed-items-report.xsd
Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/rest/reports/export/v1/removed-items-report.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/reports/removedItems/v1?sellerId={}
Possible Responses	200 OK: Populates removed items info for a seller

Processing Report

After receiving a document ID from a prior PUT call, you can request a status/processing report by placing an API call using the GET method. It will show either the processing status or the report summary and details based on the provided document ID.

If you do have errors you can see their meanings and suggested fixes at <https://marketplace.sears.com/seller-support/error-messages/>. After looking here and you still have questions, please contact us at via the contact us form with topic: XML Functionality.

-----	---

Sears Marketplace API Guide

Sample XML	https://seller.marketplace.sears.com/SellerPortal/s/schema/samples/seller-error-report-v1-example.xml
Production GET URL	https://seller.marketplace.sears.com/SellerPortal/api/reports/v1/processing-report/{document-id}?sellerId={sellerId} or https://seller.marketplace.sears.com/SellerPortal/api/reports/v1/processing-report/{document-id}?sellerId={sellerId}&programType={type} Note: If you have multiple accounts with Sears Marketplace, be sure to use this GET URL that provides a parameter for the account type (valid value is FBM. DSS & FBS are no longer supported)
Possible Responses	200 OK: body contains a list of available attributes for the requested item class.

ASN Rejection Email Alerts

When an ASN is received, it will be validated for accuracy of the Carrier code, Shipping Method and if the tracking number provided matches the correct logic for the carrier provided.

You should be able to immediately tell if an ASN failed by using calling the processing report. If you have an error and provide an update before the end of the hour, no email should be received. We only notify sellers via email if the ASN has not been correctly by the top of the hour.

Every evening, if there are any open purchase orders that had rejected ASNs, you will receive a recap email listing all the orders that an ASN attempted but have not been closed yet. An order will remain on a nightly recap email until either we have received a corrected ASN that closes this order, or the order has reached 30 days overdue and is automatically canceled. *You will not be paid for orders that are not closed or that are automatically canceled due to being 30 days overdue.* If there are no open orders with rejected ASNs, you will not receive an email.

Please note: the emails come from 'Marketplace Support' (mp_notifications@transformco.com) with a subject 'ASN Rejection Notice'.

If you need to receive ASN Rejection Emails, you must be a registered user in the Seller Portal.
