How Does Laser Hair Removal Work?

Highly concentrated light energy from the laser is used to target and destroy hair follicles responsible for hair growth without harming surrounding tissue. The pigment in these follicles absorbs the light which destroys the hair. This results in permanent hair reduction that's fast, easy and FDA-cleared.

Typically 8-10 treatments are required to achieve desired results. Several factors, including skin type, area of body being treated and hair color will establish the treatment plan outlined by our certified technicians.

During treatment, most people feel only a slight pinch at the treated area. Immediately following the treatment most people experience a mild, sunburn-like sensation, possibly accompanied by some minor swelling, which can last two to 24 hours.
