LOGALTO: M&E REVOLUTION

LogAlto is a web-based software for Monitoring and Evaluation and Results-Based Management of international development projects.

With LogAlto, seamlessly create logframes and performance management plans, measure results, monitor indicators, manage projects, and facilitate data collection.

FOR LARGE AND SMALL ORGANIZATIONS

NGOs and foundations
Donors
Ministries and government institutions
Programs and projects

USER-FRIENDLY

LogAlto is simple and elegant, designed for everyone.

100% SECURE

SSL Encryption, backups, firewalls, best practices.

CLOUD-BASED

Log in from the office, the field or anywhere in the world.

COLLABORATIVE

From field office to country office, from regional office to HQ. LogAlto allows seamless collaboration at all levels.

CUSTOMIZABLE

LogAlto can be customized to fit your requirements perfectly.

AFFORDABLE AND QUICKLY UP-AND-RUNNING

LogAlto can be up and running in just a few minutes for a fraction of the usual costs for a M&E software.

FEATURES

1. PROJECT PORTFOLIO

The project portfolio allows you to navigate through your various projects and filter them by sector, donor or location. You can then head to the project dashboard to get an overview of the project's mission and progress.

The left side of the project dashboard presents the project's photo, description, start and end dates, sector(s), donor(s), location(s), or cross-cutting issues.

The right side of the project dashboard gives you a quick access to highlighted activities and files. It can also be used to display various charts and maps created using the Analytics module.

From the project's menu, you will be able to quickly access more information regarding the project like its logframe, full list of activities, forms and more.

⚡ GOOD-TO-KNOW

Need more filters and more fields in your Project form? Consider updating to the "Configured" or "LogAlto+" plans.

The screenshot shows the LogAlto project dashboard for 'Youth Development Hub'. The interface includes a navigation sidebar, a main content area with a project description, and a right-hand panel with activity and file lists, and a beneficiaries demography chart.

DESCRIPTION

By establishing an Information and Employment Centre this project is improving the health-seeking behaviours of urban youth in Nausori Town Corridors, Suva, while also encouraging their participation in creative enterprises. Through peer mentoring and accessible, friendly services the project is making health, employment and education information and opportunities easily accessible. In addition, its services are being mirrored in 10 squatter communities through the 'Moulding my Future Program'.

More than 45,000 young people are benefitting from the Youth Development Hub project.

The Youth Development Hub relies on private funds and the government's ANCP matching grant program.

2. LOGFRAME DESIGN

LogAlto's Logframe module is a powerful tool that allows you to monitor the success and impact of your projects.

Whatever the name of your M&E tool is: performance management table, result matrix, logical framework, etc., the logframe module can be adapted to your organization.

With this feature you will be able to manage logframes and create goals, outcomes, outputs and indicators.

Each project can have its own logframe. Additionally, you will be able to create a « Global » logframe, containing outcomes, outputs or indicators that can be added (mandatory or optional) to logframes at the project level.

TIP

Easily rearrange your logframe using the drag-and-drop to place items in a different location.

GOOD-TO-KNOW

The « Configured » and « LogAlto+ » plans allow you to customize the vocabulary used and numbers of levels of your logframes. Goals, outcomes and outputs can be renamed to fit your actual logframes.

The screenshot displays the LogAlto Logframe 1.00 interface, which is approved. It shows a hierarchical structure of project goals, outcomes, and outputs with associated metrics and dates.

	BASELINE	TARGET	FREQUENCY	TYPE
Project goal 1 — To reduce the risk of children being trafficked in rural Chiang Rai communities				
Outcome 1 — To reduce the risk of children being trafficked in rural Chiang Rai communities				
Output 1.1 — At-risk youth are able to access formal education and vocational systems				
1.1-1 — Number of vulnerable youth receive support for formal and vocational education	0 2012-07-01	140 2015-06-30	Quarterly	Quantitative

3. INDICATORS

Indicators in your logframe depend widely on the context of your organization, its intervention sector, the type of activities implemented and the beneficiaries of your project. Thus, LogAlto offers flexible configuration options.

BASIC CONFIGURATIONS

Each indicator has a code, label/description, a measuring unit and a data entry frequency. Users can define quantitative indicator as well as qualitative indicators.

DISAGGREGATION/CATEGORIZATION

Indicators can be disaggregated by gender, location, age groups, rural/urban, types of products, road categories, species, profession, etc. the possibilities are endless, as LogAlto allows you to define your own categories to use as disaggregation methods.

LINK TO A CUSTOM FORM

You can link an indicator to one of your Custom forms. By doing so, your indicator will be updated automatically when new records are saved in your form.

For example: if you have an indicator called "Number of schools built," that is linked to a "List of Schools" Custom form, then, each time a new "School" record is added or updated, the value of the indicator is updated accordingly.

DATA ENTRY

Users can either enter the values of the indicator by entering the cumulative value (to date) or the progress made during the period.

GOOD-TO-KNOW

The « Configured » and « LogAlto+ » plans allows additional fields to the indicator form such as the method of collection, source of data, verification method, etc. to fit your needs.

4. FORMS

The Forms module allows users to create forms, using a simple drag-and-drop interface. This module can be used to manage any data that would be otherwise managed using Excel files. It can be useful for longitudinal case management, surveys, success stories, list of beneficiaries, events, etc.

THE FORM DESIGN TOOL ALLOWS YOU TO USE DIFFERENT TYPES OF FIELDS, INCLUDING:

✓ Text	✓ Geo. coordinates
✓ Options/drop-down list	✓ Link (URL)
✓ Yes/No	✓ Link to another form (e.g.: Training refers to a Trainer)
✓ Number	✓ Link to a project, activity or output
✓ Date	✓ Auto total
✓ Image or document	

SHARING OPTIONS

The creator of a form can share it with specific users, profiles, org. units (division) or project. For each person or group it is shared with, a profile is selected: Guest, collaborator, data collector, reviewer or administrator.

IMPORT FROM EXCEL

Users can import existing data or work offline by using Excel templates generated by LogAlto.

ANALYSIS TOOLS

Using the Analytics module, you can analyze your data using charts, maps, pivot tables, etc.

TRANSLATION

Even though LogAlto is only offered in English (or French, Spanish, Arabic with the Configured or LogAlto+ plans) the forms can be translated in any other language.

TIP

To create a form, simply drag and drop the necessary fields from the list of available fields to your form template.

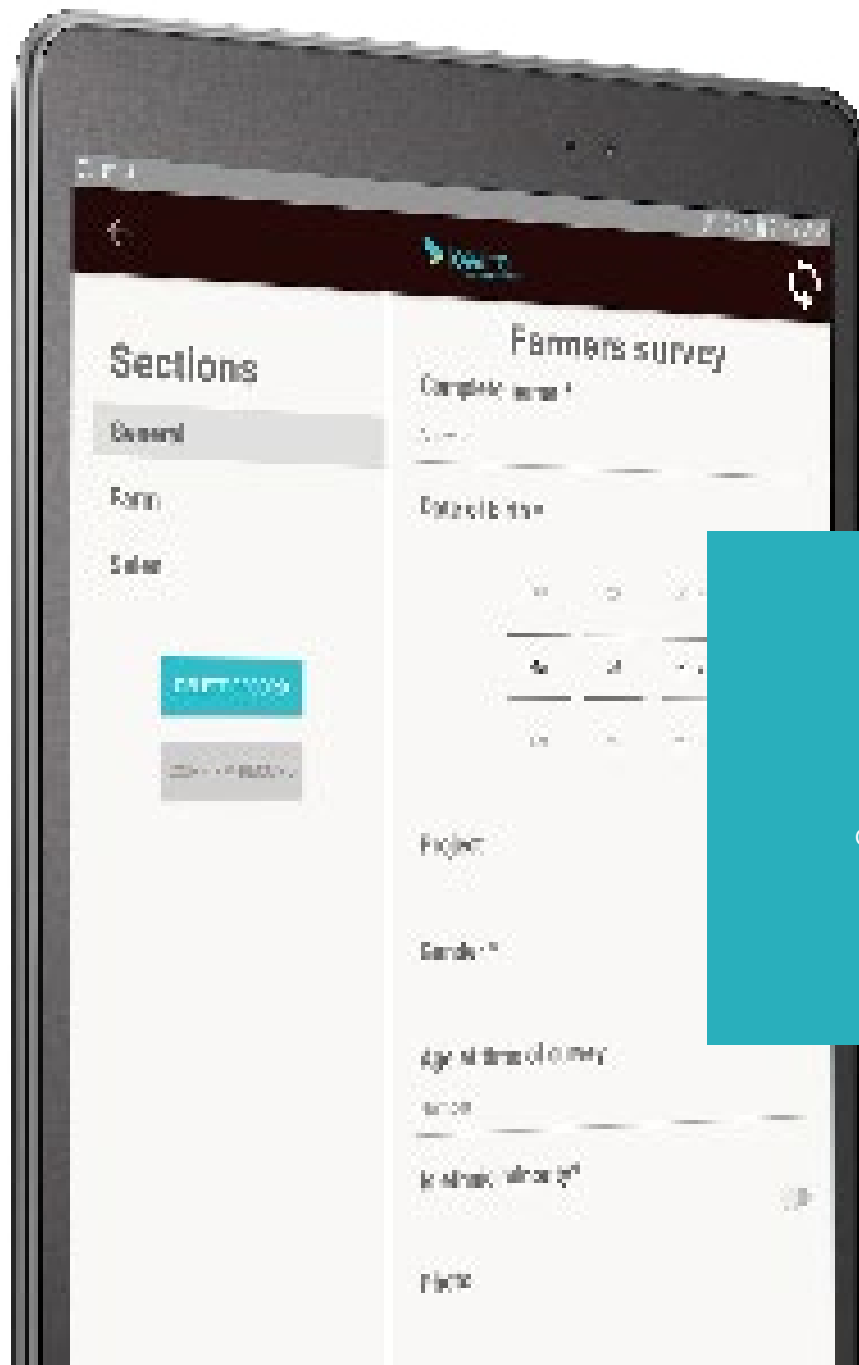

GOOD-TO-KNOW

Link a custom form to an indicator in order to update the indicator's value automatically as records are updated or when new records are added to the form

The screenshot displays the 'Beneficiaries' form design interface. On the left, a sidebar lists available field types: Text, List, Date, Number, Yes/No, Location, File, Grid, Latitude/Longitude, Rating, Link, and QR Code. The main area features a 'Participant info' form with the following fields: Text (First name), Text (Last name), List (Project), Text (Phone), Number (Tentative age), Text (Type (category or occupation)), Location (Location), Latitude/Longitude (Coordinates), and File (Photo). A 'ADD A NEW SECTION +' button is visible at the top of the form design area.

5. MOBILE APPLICATION

Collect Data from the field with the Mobile application of LogAlto available on Google Play.

TIP
Collect data Offline or/and Online from anywhere in the world

GOOD-TO-KNOW
The mobile application's sole purpose is to enable collaborative data collection, organized in records. Only the Forms module is optimized as a mobile application.

Collect Data Offline

Get your photo and GPS coordinates directly from the mobile device.

Sync collected data onto the web platform, once connection is available

Link indicators to forms so LogAlto can automatically update indicators based on collected data.

6. SEARCH AND FILTERS

Throughout the software, many filtering and search tools are available.

All the elements in the system can be filtered and searched: Projects, activities, logframes, custom forms records, files, users and more. For instance, projects can be searched using keywords, status, location, sectors, dates, etc.

GOOD-TO-KNOW

The Files page allows users to search through all files in the system. Including files attached to projects or form records.

7. DASHBOARD

LogAlto's customizable and elegant dashboard gives users an overall view of the progress made and of the level of completion, allowing users to seize which action they must focus on first.

To customize the information presented on their dashboard, users simply: 1) create their own widgets via the Analytics module, 2) add the widgets to their dashboard, 3) place them in the wanted location and resize them.

GOOD-TO-KNOW

Quickly toggle between the main and the personal user dashboard. The administrator of the system can share report that will be displayed on the main dashboard.

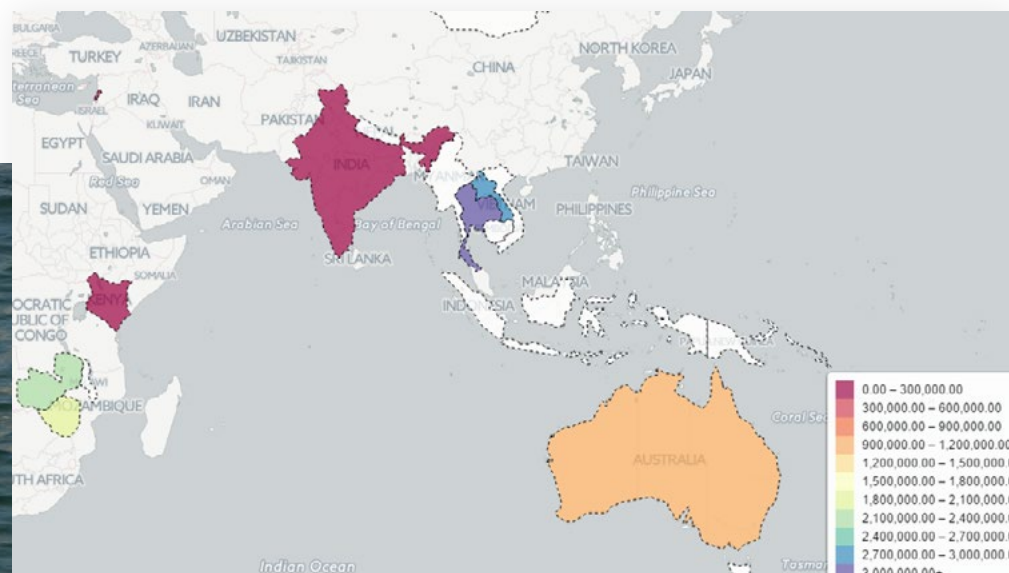

8. ANALYTICS

The Analytics module supports you in identifying and understanding the different factors resulting in the success or failure of your projects.

VISUALIZATION MODES

The module offers many visualizations options:

- ✓ Standard table/list
- ✓ Radar chart
- ✓ Bar chart
- ✓ Geo-location maps
- ✓ Score card
- ✓ Pie chart
- ✓ Histogram/Line chart
- ✓ Icon chart
- ✓ Geo-distribution maps
- ✓ and more tools will be added soon!
- ✓ Pivot table

FORMATTING OPTIONS FOR TABLES

Tables can be refined using:

- Filters
- Displayed columns
- Grouping
- Sorting
- Totals
- Conditional formatting

FORMATTING OPTIONS FOR CHARTS

Charts are configured using the following set of options:

- Filters
- Measure: what is measured, how is it aggregated (sum or average)?
- Disaggregations: what should be compared?
- Level (for maps: continent, country or district)

GOOD-TO-KNOW

When saved, visualizations become templates that are updated as data changes. If the user comes back to it a few months later, it will be automatically updated, reflecting newly entered data, but keeping the same

SAVE AND EXPORT

Personalized reports/data visualization can be saved for later use.

Reports can also be exported (to excel, PDF, CSV, or standard image files) and can be added on the dashboard as a widget.

STARTING PLAN

Ideal if you want to try out LogAlto and see if the out-of-the-box fits your needs or if you should go for the Configured or LogAlto+ plan

OUT OF THE BOX

Ideal if you have a smaller team, or if you want something more affordable and very quickly up-and-running

CONFIGURED

Ideal for organizations that want to get more organized quickly, but prefer fewer features to focus on the essential and ensure user adoption

LOGALTO +

Ideal for organizations that already have more complex M&E processes and workflows in place and that not only want to facilitate data management, but to facilitate these processes as well.
