Preface xxiii

Acknowledgments xxvii

PART ONE The Fundamentals

1 Structure and Properties

- 1.1 Organic chemistry 1
- 1.2 The structural theory 3
- 1.3 The chemical bond before 1926 4
- 1.4 Quantum mechanics 5
- 1.5 Atomic orbitals 6
- 1.6 Electronic configuration. Pauli exclusion principle 8
- 1.7 Molecular orbitals 9
- 1.8 The covalent bond 9
- 1.9 Hybrid orbitals: sp 11
- 1.10 Hybrid orbitals: sp^2 13
- 1.11 Hybrid orbitals: sp^3 15
- 1.12 Unshared pairs of electrons 17
- 1.13 Intramolecular forces 20
- 1.14 Bond dissociation energy. Homolysis and heterolysis 21
- 1.15 Polarity of bonds 23
- 1.16 Polarity of molecules 23
- 1.17 Structure and physical properties 26
- 1.18 Melting point 27
- 1.19 Intermolecular forces 28
- 1.20 Boiling point 30
- 1.21 Solubility 31

- 1.22 Acids and bases 33
- 1.23 Isomerism 36

2 Methane *Energy of Activation. Transition State*

- 2.1 Hydrocarbons 39
- 2.2 Structure of methane 40
- 2.3 Physical properties 41
- 2.4 Source 41
- 2.5 Reactions 42
- 2.6 Oxidation. Heat of combustion 42
- 2.7 Chlorination: a substitution reaction 43
- 2.8 Control of chlorination 44
- 2.9 Reaction with other halogens: halogenation 44
- 2.10 Relative reactivity 45
- 2.11 Reaction mechanisms 45
- 2.12 Mechanism of chlorination. Free radicals 46
- 2.13 Chain reactions 48
- 2.14 Inhibitors 49
- 2.15 Heat of reaction 50
- 2.16 Energy of activation 51
- 2.17 Progress of reaction: energy changes 52
- 2.18 Rate of reaction 55
- 2.19 Relative rates of reaction 58
- 2.20 Relative reactivities of halogens toward methane 59
- 2.21 An alternative mechanism for halogenation 61
- 2.22 Structure of the methyl radical. sp^2 Hybridization 64
- 2.23 Transition state 65
- 2.24 Reactivity and development of the transition state 67
- 2.25 Chlorofluorocarbons and the ozone shield 69
- 2.26 Molecular formula: its fundamental importance 72
- 2.27 Qualitative elemental analysis 72
- 2.28 Quantitative elemental analysis: carbon, hydrogen, and halogen 73
- 2.29 Empirical formula 74
- 2.30 Molecular weight. Molecular formula 74

3 Alkanes *Free-Radical Substitution*

- 3.1 Classification by structure: the family 77
- 3.2 Structure of ethane 78
- 3.3 Free rotation about the carbon-carbon single bond. Conformations. Torsional strain 79
- 3.4 Propane and the butanes 83
- 3.5 Conformations of *n*-butane. Van der Waals repulsion 85
- 3.6 Higher alkanes. The homologous series 86
- 3.7 Nomenclature 87
- 3.8 Alkyl groups 88
- 3.9 Common names of alkanes 90
- 3.10 IUPAC names of alkanes 90

3.11	Classes of carbon atoms and hydrogen atoms	92
3.12	Physical properties	92
3.13	Industrial source	94
3.14	Industrial source <i>vs.</i> laboratory preparation	96
3.15	Preparation	97
3.16	The Grignard reagent: an organometallic compound	99
3.17	Coupling of alkyl halides with organometallic compounds	101
3.18	Reactions	102
3.19	Halogenation	104
3.20	Mechanism of halogenation	106
3.21	Orientation of halogenation	107
3.22	Relative reactivities of alkanes toward halogenation	109
3.23	Ease of abstraction of hydrogen atoms. Energy of activation	110
3.24	Stability of free radicals	111
3.25	Ease of formation of free radicals	113
3.26	Transition state for halogenation	113
3.27	Orientation and reactivity	114
3.28	Reactivity and selectivity	115
3.29	Non-rearrangement of free radicals. Isotopic tracers	116
3.30	Combustion	118
3.31	The greenhouse effect	119
3.32	Pyrolysis: cracking	120
3.33	Determination of structure	121
3.34	Analysis of alkanes	122

4 Stereochemistry I. Stereoisomers

4.1	Stereochemistry and stereoisomerism	125
4.2	Isomer number and tetrahedral carbon	126
4.3	Optical activity. Plane-polarized light	128
4.4	The polarimeter	128
4.5	Specific rotation	129
4.6	Enantiomerism: the discovery	130
4.7	Enantiomerism and tetrahedral carbon	131
4.8	Enantiomerism and optical activity	133
4.9	Prediction of enantiomerism. Chirality	133
4.10	The chiral center	135
4.11	Enantiomers	136
4.12	The racemic modification	138
4.13	Optical activity: a closer look	139
4.14	Configuration	140
4.15	Specification of configuration: <i>R</i> and <i>S</i>	140
4.16	Sequence rules	141
4.17	Diastereomers	144
4.18	<i>Meso</i> structures	146
4.19	Specification of configuration: more than one chiral center	148
4.20	Conformational isomers	149
4.21	Reactions involving stereoisomers	150
4.22	Generation of a chiral center. Synthesis and optical activity	151

- 4.23 Reactions of chiral molecules. Bond-breaking 153
- 4.24 Reactions of chiral molecules. Relating configurations 154
- 4.25 Optical purity 156
- 4.26 Reactions of chiral molecules. Generation of a second chiral center 156
- 4.27 Reactions of chiral molecules with optically active reagents. Resolution 158
- 4.28 Reactions of chiral molecules. Mechanism of free-radical chlorination 160

5 Alkyl Halides *Nucleophilic Aliphatic Substitution*

- 5.1 Homolytic and heterolytic chemistry 165
- 5.2 Relative rates of competing reactions 166
- 5.3 Structure. The functional group 167
- 5.4 Classification and nomenclature 168
- 5.5 Physical properties 169
- 5.6 Preparation 170
- 5.7 Reactions. Nucleophilic aliphatic substitution 172
- 5.8 Nucleophilic aliphatic substitution. Nucleophiles and leaving groups 175
- 5.9 Rate of reaction: effect of concentration. Kinetics 177
- 5.10 Kinetics of nucleophilic aliphatic substitution. Second-order and first-order reactions 178
- 5.11 Nucleophilic aliphatic substitution: duality of mechanisms 179
- 5.12 The S_N2 reaction: mechanism and kinetics 181
- 5.13 The S_N2 reaction: stereochemistry. Inversion of configuration 182
- 5.14 The S_N2 reaction: reactivity. Steric hindrance 185
- 5.15 The S_N1 reaction: mechanism and kinetics. Rate-determining step 188
- 5.16 Carbocations 191
- 5.17 Structure of carbocations 193
- 5.18 The S_N1 reaction: stereochemistry 194
- 5.19 Relative stabilities of carbocations 196
- 5.20 Stabilization of carbocations. Accommodation of charge. Polar effects 199
- 5.21 The S_N1 reaction: reactivity. Ease of formation of carbocations 200
- 5.22 Rearrangement of carbocations 203
- 5.23 S_N2 vs. S_N1 208
- 5.24 Analysis of alkyl halides 211

6 Alcohols and Ethers

- 6.1 Introduction 213
- 6.2 Structure of alcohols 214
- 6.3 Classification of alcohols 214
- 6.4 Nomenclature of alcohols 215
- 6.5 Physical properties of alcohols 215

- 6.6 Industrial source 218
- 6.7 Fermentation of carbohydrates 219
- 6.8 Fuel from carbohydrates. Carbon dioxide balance 219
- 6.9 Ethanol 221
- 6.10 Preparation of alcohols 222
- 6.11 Reactions of alcohols 224
- 6.12 Alcohols as acids and bases 227
- 6.13 Reaction of alcohols with hydrogen halides. Acid catalysis 229
- 6.14 Formation of alkyl sulfonates 233
- 6.15 Oxidation of alcohols 235

ETHERS

- 6.16 Structure and nomenclature of ethers 237
- 6.17 Physical properties of ethers 238
- 6.18 Industrial sources of ethers. Dehydration of alcohols 238
- 6.19 Preparation of ethers 240
- 6.20 Preparation of ethers. Williamson synthesis 241
- 6.21 Reactions of ethers. Cleavage by acids 242
- 6.22 Analysis of alcohols 243
- 6.23 Analysis of ethers 244

7 Role of the Solvent *Secondary Bonding*

- 7.1 Role of the solvent 249
- 7.2 Secondary bonding 250
- 7.3 Solubility: non-ionic solutes 252
- 7.4 Solubility: ionic solutes. Protic and aprotic solvents. Ion pairs 254
- 7.5 The S_N1 reaction: role of the solvent. Ion-dipole bonds 258
- 7.6 The S_N2 reaction: role of the solvent. Protic and aprotic solvents 261
- 7.7 The S_N2 reaction: phase-transfer catalysis 264
- 7.8 S_N2 vs. S_N1 : effect of the solvent 267
- 7.9 Solvolysis. Nucleophilic assistance by the solvent 268
- 7.10 The medium: a message 271

8 Alkenes I. Structure and Preparation *Elimination*

- 8.1 Unsaturated hydrocarbons 273
- 8.2 Structure of ethylene. The carbon-carbon double bond 273
- 8.3 Propylene 276
- 8.4 Hybridization and orbital size 276
- 8.5 The butylenes 277
- 8.6 Geometric isomerism 279
- 8.7 Higher alkenes 282
- 8.8 Names of alkenes 282
- 8.9 Physical properties 283
- 8.10 The organic chemistry of vision 285
- 8.11 Industrial source 287
- 8.12 Preparation 287
- 8.13 Dehydrohalogenation of alkyl halides: 1,2-elimination 290
- 8.14 Kinetics of dehydrohalogenation. Duality of mechanism 293

- 8.15 The E2 mechanism 294
- 8.16 Evidence for the E2 mechanism. Kinetics and absence of rearrangements 294
- 8.17 Evidence for the E2 mechanism. Isotope effects 295
- 8.18 Evidence for the E2 mechanism. Absence of hydrogen exchange 297
- 8.19 Evidence for the E2 mechanism. The element effect 299
- 8.20 The E2 reaction: orientation and reactivity 300
- 8.21 The E1 mechanism 303
- 8.22 Evidence for the E1 mechanism 304
- 8.23 The E1 reaction: orientation 306
- 8.24 Elimination: E2 vs. E1 308
- 8.25 Elimination vs. substitution 308
- 8.26 Dehydration of alcohols 310

9 Alkenes II. Reactions of the Carbon–Carbon Double Bond *Electrophilic and Free-Radical Addition*

- 9.1 Reactions of alkenes 317
- 9.2 Reactions at the carbon–carbon double bond. Addition 317
- 9.3 Hydrogenation. Heat of hydrogenation 323
- 9.4 Heat of hydrogenation and stability of alkenes 326
- 9.5 Addition of hydrogen halides. Markovnikov's rule. Regioselective reactions 327
- 9.6 Addition of hydrogen bromide. Peroxide effect 330
- 9.7 Addition of sulfuric acid 331
- 9.8 Addition of water. Hydration 332
- 9.9 Electrophilic addition: mechanism 332
- 9.10 Electrophilic addition: rearrangements 334
- 9.11 Electrophilic addition: orientation and reactivity 335
- 9.12 Addition of halogens 339
- 9.13 Mechanism of addition of halogens 340
- 9.14 Halohydrin formation: addition of the elements of hypohalous acids 342
- 9.15 Addition of alkenes. Dimerization 343
- 9.16 Addition of alkanes. Alkylation 344
- 9.17 Oxymercuration–demercuration 346
- 9.18 Hydroboration–oxidation 347
- 9.19 Orientation of hydroboration 348
- 9.20 Mechanism of hydroboration 349
- 9.21 Free-radical addition. Mechanism of the peroxide-initiated addition of HBr 351
- 9.22 Orientation of free-radical addition 352
- 9.23 Other free-radical additions 355
- 9.24 Free-radical polymerization of alkenes 356
- 9.25 Hydroxylation. Formation of 1,2-diols 357
- 9.26 Cleavage: determination of structure by degradation. Ozonolysis 358
- 9.27 Analysis of alkenes 360

10 Stereochemistry II. Stereoselective and Stereospecific Reactions

- 10.1 Organic chemistry in three dimensions 367
- 10.2 Stereochemistry of addition of halogens to alkenes. *syn*- and *anti*-addition 368
- 10.3 Mechanism of addition of halogens to alkenes 372
- 10.4 Stereochemistry of the E2 reaction. *syn*- and *anti*-elimination 377
- 10.5 Stereospecific reactions 381
- 10.6 Stereoselectivity *vs.* stereospecificity 382
- 10.7 A look ahead 383

11 Conjugation and Resonance *Dienes*

- 11.1 The carbon-carbon double bond as a substituent 387
- 11.2 Free-radical halogenation of alkenes: substitution *vs.* addition 388
- 11.3 Free-radical substitution in alkenes: orientation and reactivity 390
- 11.4 Free-radical substitution in alkenes: allylic rearrangement 392
- 11.5 Symmetry of the allyl radical 393
- 11.6 The theory of resonance 394
- 11.7 The allyl radical as a resonance hybrid 395
- 11.8 Stability of the allyl radical 397
- 11.9 Orbital picture of the allyl radical 397
- 11.10 Using the resonance theory 399
- 11.11 Resonance stabilization of alkyl radicals. Hyperconjugation 401
- 11.12 The allyl cation as a resonance hybrid 402
- 11.13 Nucleophilic substitution in allylic substrates: S_N1. Reactivity. Allylic rearrangement 404
- 11.14 Stabilization of carbocations: the resonance effect 406
- 11.15 Nucleophilic substitution in allylic substrates: S_N2 407
- 11.16 Nucleophilic substitution in vinylic substrates. Vinylic cations 407
- 11.17 Dienes: structure and properties 409
- 11.18 Stability of conjugated dienes 410
- 11.19 Resonance in conjugated dienes 411
- 11.20 Resonance in alkenes. Hyperconjugation 413
- 11.21 Ease of formation of conjugated dienes: orientation of elimination 414
- 11.22 Electrophilic addition to conjugated dienes. 1,4-Addition 414
- 11.23 1,2- *vs.* 1,4-Addition. Rate *vs.* equilibrium 417
- 11.24 Free-radical polymerization of dienes. Rubber and rubber substitutes 419
- 11.25 Isoprene and the isoprene rule 421
- 11.26 Analysis of dienes 421

12 Alkynes

- 12.1 Introduction 425
- 12.2 Structure of acetylene. The carbon-carbon triple bond 425
- 12.3 Higher alkynes. Nomenclature 428

- 12.4 Physical properties of alkynes 428
- 12.5 Industrial source of acetylene 429
- 12.6 Preparation of alkynes 429
- 12.7 Reactions of alkynes 430
- 12.8 Reduction of alkenes 433
- 12.9 Electrophilic addition to alkynes 434
- 12.10 Hydration of alkynes. Tautomerism 435
- 12.11 Acidity of alkynes. Very weak acids 436
- 12.12 Reactions of metal acetylides. Synthesis of alkynes 438
- 12.13 Formation of carbon-carbon bonds. Role played by organometallic compounds 439
- 12.14 Analysis of alkynes 440

13 Cyclic Aliphatic Compounds

- 13.1 Open-chain and cyclic compounds 443
- 13.2 Nomenclature 443
- 13.3 Industrial source 446
- 13.4 Preparation 447
- 13.5 Reactions 448
- 13.6 Reactions of small-ring compounds. Cyclopropane and cyclobutane 449
- 13.7 Baeyer strain theory 450
- 13.8 Heats of combustion and relative stabilities of the cycloalkanes 450
- 13.9 Orbital picture of angle strain 453
- 13.10 Factors affecting stability of conformations 454
- 13.11 Conformations of cycloalkanes 455
- 13.12 Equatorial and axial bonds in cyclohexane 460
- 13.13 Stereoisomerism of cyclic compounds: *cis* and *trans* isomers 463
- 13.14 Stereoisomerism of cyclic compounds. Conformational analysis 466
- 13.15 Stereochemistry of elimination from alicyclic compounds 471
- 13.16 Carbenes. Methylene. Cycloaddition 473
- 13.17 Addition of substituted carbenes. 1,1-Elimination 476
- 13.18 Cyclic ethers 478
- 13.19 Crown ethers. Host-guest relationship 478
- 13.20 Epoxides. Structure and preparation 481
- 13.21 Reactions of epoxides 482
- 13.22 Acid-catalyzed cleavage of epoxides. *anti*-Hydroxylation 483
- 13.23 Base-catalyzed cleavage of epoxides 485
- 13.24 Orientation of cleavage of epoxides 485
- 13.25 Analysis of alicyclic compounds 487

14 Aromaticity *Benzene*

- 14.1 Aliphatic and aromatic compounds 493
- 14.2 Structure of benzene 494
- 14.3 Molecular formula. Isomer number. Kekulé structure 494
- 14.4 Stability of the benzene ring. Reactions of benzene 497

- 14.5 Stability of the benzene ring. Heats of hydrogenation and combustion 498
- 14.6 Carbon-carbon bond lengths in benzene 499
- 14.7 Resonance structure of benzene 500
- 14.8 Orbital picture of benzene 501
- 14.9 Representation of the benzene ring 503
- 14.10 Aromatic character. The Hückel $4n + 2$ rule 504
- 14.11 Nomenclature of benzene derivatives 508
- 14.12 Polynuclear aromatic hydrocarbons. Naphthalene 510
- 14.13 Quantitative elemental analysis: nitrogen and sulfur 513

15 Electrophilic Aromatic Substitution

- 15.1 Introduction 517
- 15.2 Effect of substituent groups 519
- 15.3 Determination of orientation 520
- 15.4 Determination of relative reactivity 521
- 15.5 Classification of substituent groups 522
- 15.6 Orientation in disubstituted benzenes 522
- 15.7 Orientation and synthesis 524
- 15.8 Mechanism of nitration 525
- 15.9 Mechanism of sulfonation 527
- 15.10 Mechanism of Friedel-Crafts alkylation 528
- 15.11 Mechanism of halogenation 529
- 15.12 Desulfonation. Mechanism of protonation 529
- 15.13 Mechanism of electrophilic aromatic substitution: a summary 530
- 15.14 Mechanism of electrophilic aromatic substitution: the two steps 531
- 15.15 Reactivity and orientation 535
- 15.16 Theory of reactivity 536
- 15.17 Theory of orientation 538
- 15.18 Electron release via resonance 540
- 15.19 Effect of halogen on electrophilic aromatic substitution 542
- 15.20 Relation to other carbocation reactions 544
- 15.21 Electrophilic substitution in naphthalene 545

16 Aromatic-Aliphatic Compounds *Arenes and Their Derivatives*

- 16.1 The aromatic ring as a substituent 549
- 16.2 Aromatic-aliphatic hydrocarbons: arenes 549
- 16.3 Structure and nomenclature of arenes and their derivatives 551
- 16.4 Physical properties 552
- 16.5 Industrial source of alkylbenzenes 555
- 16.6 Preparation of alkylbenzenes 556
- 16.7 Friedel-Crafts alkylation 557
- 16.8 Mechanism of Friedel-Crafts alkylation 558
- 16.9 Limitations of Friedel-Crafts alkylation 561
- 16.10 Reactions of alkylbenzenes 561

- 16.11 Oxidation of alkylbenzenes 563
- 16.12 Electrophilic aromatic substitution in alkylbenzenes 564
- 16.13 Halogenation of alkylbenzenes: ring *vs.* side chain 565
- 16.14 Side-chain halogenation of alkylbenzenes 566
- 16.15 Resonance stabilization of the benzyl radical 568
- 16.16 Triphenylmethyl: a stable free radical 570
- 16.17 Stability of the benzyl cation 574
- 16.18 Nucleophilic substitution in benzylic substrates 575
- 16.19 Preparation of alkenylbenzenes. Conjugation with the ring 576
- 16.20 Reactions of alkenylbenzenes 578
- 16.21 Addition to conjugated alkenylbenzenes 579
- 16.22 Alkynylbenzenes 580
- 16.23 Analysis of arenes 580

17 Spectroscopy and Structure

- 17.1 Determination of structure: spectroscopic methods 585
- 17.2 The mass spectrum 586
- 17.3 The electromagnetic spectrum 589
- 17.4 The infrared spectrum 590
- 17.5 Infrared spectra of hydrocarbons 592
- 17.6 Infrared spectra of alcohols 594
- 17.7 Infrared spectra of ethers 596
- 17.8 The ultraviolet spectrum 597
- 17.9 The nuclear magnetic resonance (NMR) spectrum 600
- 17.10 NMR. Number of signals. Equivalent and non-equivalent protons 601
- 17.11 NMR. Positions of signals. Chemical shift 604
- 17.12 NMR. Peak area and proton counting 609
- 17.13 NMR. Splitting of signals. Spin-spin coupling 610
- 17.14 NMR. Coupling constants 620
- 17.15 NMR. Complicated spectra. Deuterium labeling 623
- 17.16 Equivalence of protons: a closer look 625
- 17.17 Carbon-13 NMR (CMR) spectroscopy 629
- 17.18 CMR. Splitting 630
- 17.19 CMR. Chemical shift 634
- 17.20 NMR and CMR spectra of hydrocarbons 639
- 17.21 NMR and CMR spectra of alkyl halides 640
- 17.22 NMR and CMR spectra of alcohols and ethers. Hydrogen bonding. Proton exchange 640
- 17.23 The electron spin resonance (ESR) spectrum 642

18 Aldehydes and Ketones *Nucleophilic Addition*

- 18.1 Structure 657
- 18.2 Nomenclature 658
- 18.3 Physical properties 660
- 18.4 Preparation 661
- 18.5 Preparation of ketones by Friedel-Crafts acylation 666
- 18.6 Preparation of ketones by use of organocopper compounds 668

- 18.7 Reactions. Nucleophilic addition 669
- 18.8 Oxidation 675
- 18.9 Reduction 677
- 18.10 Addition of cyanide 678
- 18.11 Addition of derivatives of ammonia 679
- 18.12 Addition of alcohols. Acetal formation 680
- 18.13 Cannizzaro reaction 683
- 18.14 Addition of Grignard reagents 685
- 18.15 Products of the Grignard synthesis 686
- 18.16 Planning a Grignard synthesis 688
- 18.17 Syntheses using alcohols 692
- 18.18 Limitations of the Grignard synthesis 695
- 18.19 Tetrahydropyranyl (THP) ethers: the use of a protecting group 696
- 18.20 Analysis of aldehydes and ketones 697
- 18.21 Iodoform test 697
- 18.22 Analysis of 1,2-diols. Periodic acid oxidation 699
- 18.23 Spectroscopic analysis of aldehydes and ketones 700

19 Carboxylic Acids

- 19.1 Structure 713
- 19.2 Nomenclature 714
- 19.3 Physical properties 717
- 19.4 Salts of carboxylic acids 718
- 19.5 Industrial source 719
- 19.6 Preparation 720
- 19.7 Grignard synthesis 723
- 19.8 Nitrile synthesis 724
- 19.9 Reactions 725
- 19.10 Ionization of carboxylic acids. Acidity constant 729
- 19.11 Equilibrium 730
- 19.12 Acidity of carboxylic acids 732
- 19.13 Structure of carboxylate ions 733
- 19.14 Effect of substituents on acidity 735
- 19.15 Conversion into acid chlorides 737
- 19.16 Conversion into esters 737
- 19.17 Conversion into amides 740
- 19.18 Reduction of acids to alcohols 740
- 19.19 Halogenation of aliphatic acids. Substituted acids 741
- 19.20 Dicarboxylic acids 742
- 19.21 Analysis of carboxylic acids. Neutralization equivalent 744
- 19.22 Spectroscopic analysis of carboxylic acids 745

20 Functional Derivatives of Carboxylic Acids *Nucleophilic Acyl Substitution*

- 20.1 Structure 753
- 20.2 Nomenclature 754
- 20.3 Physical properties 754

- 20.4 Nucleophilic acyl substitution. Role of the carbonyl group 755
- 20.5 Nucleophilic substitution: alkyl *vs.* acyl 759
- ACID CHLORIDES
- 20.6 Preparation of acid chlorides 760
- 20.7 Reactions of acid chlorides 761
- 20.8 Conversion of acid chlorides into acid derivatives 762
- ACID ANHYDRIDES
- 20.9 Preparation of acid anhydrides 763
- 20.10 Reactions of acid anhydrides 764
- AMIDES
- 20.11 Preparation of amides 766
- 20.12 Reactions of amides 766
- 20.13 Hydrolysis of amides 767
- 20.14 Imides 767
- ESTERS
- 20.15 Preparation of esters 768
- 20.16 Reactions of esters 770
- 20.17 Alkaline hydrolysis of esters 773
- 20.18 Acidic hydrolysis of esters 776
- 20.19 Ammonolysis of esters 778
- 20.20 Transesterification 778
- 20.21 Reaction of esters with Grignard reagents 779
- 20.22 Reduction of esters 780
- 20.23 Functional derivatives of carbonic acid 780
- 20.24 Analysis of carboxylic acid derivatives. Saponification equivalent 784
- 20.25 Spectroscopic analysis of carboxylic acid derivatives 785

21 Carbanions I *Aldol and Claisen Condensations*

- 21.1 Acidity of α -hydrogens 797
- 21.2 Reactions involving carbanions 799
- 21.3 Base-promoted halogenation of ketones 802
- 21.4 Acid-catalyzed halogenation of ketones. Enolization 804
- 21.5 Aldol condensation 805
- 21.6 Dehydration of aldol products 807
- 21.7 Use of aldol condensation in synthesis 808
- 21.8 Crossed aldol condensation 809
- 21.9 Reactions related to the aldol condensation 810
- 21.10 The Wittig reaction 811
- 21.11 Claisen condensation. Formation of β -keto esters 813
- 21.12 Crossed Claisen condensation 816

22 Amines I. Preparation and Physical Properties

- 22.1 Structure 821
- 22.2 Classification 821
- 22.3 Nomenclature 822
- 22.4 Physical properties of amines 823
- 22.5 Salts of amines 823

- 22.6 Stereochemistry of nitrogen 825
- 22.7 Industrial source 827
- 22.8 Preparation 828
- 22.9 Reduction of nitro compounds 832
- 22.10 Ammonolysis of halides 832
- 22.11 Reductive amination 834
- 22.12 Hofmann degradation of amides 836
- 22.13 Synthesis of secondary and tertiary amines 836
- 22.14 Heterocyclic amines 837
- 22.15 Hofmann rearrangement. Migration to electron-deficient nitrogen 838
- 22.16 Hofmann rearrangement. Stereochemistry at the migrating group 840
- 22.17 Hofmann rearrangement. Timing of the steps 841

23 Amines II. Reactions

- 23.1 Reactions 845
- 23.2 Basicity of amines. Basicity constant 849
- 23.3 Structure and basicity 850
- 23.4 Effect of substituents on basicity of aromatic amines 853
- 23.5 Quaternary ammonium salts. Hofmann elimination 854
- 23.6 E2 elimination: Hofmann orientation. The variable E2 transition state 855
- 23.7 Conversion of amines into substituted amides 857
- 23.8 Ring substitution in aromatic amines 860
- 23.9 Sulfonation of aromatic amines. Dipolar ions 862
- 23.10 Sulfanilamide. The sulfa drugs 863
- 23.11 Reactions of amines with nitrous acid 864
- 23.12 Diazonium salts. Preparation and reactions 866
- 23.13 Diazonium salts. Replacement by halogen. Sandmeyer reaction 869
- 23.14 Diazonium salts. Replacement by —CN. Synthesis of carboxylic acids 870
- 23.15 Diazonium salts. Replacement by —OH. Synthesis of phenols 870
- 23.16 Diazonium salts. Replacement by —H 871
- 23.17 Syntheses using diazonium salts 871
- 23.18 Coupling of diazonium salts. Synthesis of azo compounds 873
- 23.19 Analysis of amines. Hinsberg test 876
- 23.20 Analysis of substituted amides 877
- 23.21 Spectroscopic analysis of amines and substituted amides 877

24 Phenols

- 24.1 Structure and nomenclature 889
- 24.2 Physical properties 890
- 24.3 Salts of phenols 893
- 24.4 Industrial source 893
- 24.5 Rearrangement of hydroperoxides. Migration to electron-deficient oxygen 895

- 24.6 Rearrangement of hydroperoxides. Migratory aptitude 896
- 24.7 Preparation 898
- 24.8 Reactions 899
- 24.9 Acidity of phenols 903
- 24.10 Ester formation. Fries rearrangement 905
- 24.11 Ring substitution 906
- 24.12 Kolbe reaction. Synthesis of phenolic acids 908
- 24.13 Reimer-Tiemann reaction. Synthesis of phenolic aldehydes. Dichlorocarbene 908
- 24.14 Formation of aryl ethers 909
- 24.15 Reactions of aryl ethers 911
- 24.16 Analysis of phenols 912
- 24.17 Spectroscopic analysis of phenols 912

25 Carbanions II *Malonic Ester and Acetoacetic Ester Syntheses*

- 25.1 Carbanions in organic synthesis 923
- 25.2 Malonic ester synthesis of carboxylic acids 924
- 25.3 Acetoacetic ester synthesis of ketones 927
- 25.4 Decarboxylation of β -keto acids and malonic acids 930
- 25.5 Direct and indirect alkylation of esters and ketones 931
- 25.6 Synthesis of acids and esters via 2-oxazolines 932
- 25.7 Organoborane synthesis of acids and ketones 933
- 25.8 Alkylation of carbonyl compounds via enamines 935

PART TWO Special Topics

26 Aryl Halides *Nucleophilic Aromatic Substitution*

- 26.1 Structure 943
- 26.2 Physical properties 944
- 26.3 Preparation 946
- 26.4 Reactions 948
- 26.5 Low reactivity of aryl and vinyl halides 949
- 26.6 Structure of aryl and vinyl halides 950
- 26.7 Nucleophilic aromatic substitution: bimolecular displacement 952
- 26.8 Bimolecular displacement mechanism for nucleophilic aromatic substitution 955
- 26.9 Reactivity in nucleophilic aromatic substitution 956
- 26.10 Orientation in nucleophilic aromatic substitution 957
- 26.11 Electron withdrawal by resonance 958
- 26.12 Evidence for the two steps in bimolecular displacement 959
- 26.13 Nucleophilic substitution: aliphatic and aromatic 961
- 26.14 Elimination-addition mechanism for nucleophilic aromatic substitution. Benzyne 962
- 26.15 Analysis of aryl halides 967

27 α,β -Unsaturated Carbonyl Compounds *Conjugate Addition*

- 27.1 Structure and properties 971
- 27.2 Preparation 973
- 27.3 Interaction of functional groups 974
- 27.4 Electrophilic addition 974
- 27.5 Nucleophilic addition 976
- 27.6 Comparison of nucleophilic and electrophilic addition 978
- 27.7 The Michael addition 979
- 27.8 The Diels–Alder reaction 982
- 27.9 Quinones 984

28 Molecular Orbitals. Orbital Symmetry

- 28.1 Molecular orbital theory 991
- 28.2 Wave equations. Phase 992
- 28.3 Molecular orbitals. LCAO method 993
- 28.4 Bonding and antibonding orbitals 994
- 28.5 Electronic configurations of some molecules 996
- 28.6 Aromatic character. The Hückel $4n + 2$ rule 1000
- 28.7 Orbital symmetry and the chemical reaction 1004
- 28.8 Electrocyclic reactions 1005
- 28.9 Cycloaddition reactions 1013
- 28.10 Sigmatropic reactions 1019

29 Symphoria *Neighboring Group Effects. Catalysis by Transition Metal Complexes*

- 29.1 Symphoria 1031
- 29.2 Neighboring group effects: the discovery. Stereochemistry 1032
- 29.3 Neighboring group effects: intramolecular nucleophilic attack 1035
- 29.4 Neighboring group effects: rate of reaction. Anchimeric assistance 1037
- 29.5 Homogeneous hydrogenation. Transition metal complexes 1042
- 29.6 Stereochemistry of homogeneous hydrogenation: diastereoselectivity 1046
- 29.7 Stereochemistry of homogeneous hydrogenation: enantioselectivity 1049
- 29.8 The oxo process 1052
- 29.9 Enzyme action 1054

30 Heterocyclic Compounds

- 30.1 Heterocyclic systems 1057
 - FIVE-MEMBERED RINGS
- 30.2 Structure of pyrrole, furan, and thiophene 1059
- 30.3 Source of pyrrole, furan, and thiophene 1061
- 30.4 Electrophilic substitution in pyrrole, furan, and thiophene. Reactivity and orientation 1062

- 30.5 Saturated five-membered heterocycles 1065
SIX-MEMBERED RINGS
- 30.6 Structure of pyridine 1066
- 30.7 Source of pyridine compounds 1067
- 30.8 Reactions of pyridine 1068
- 30.9 Electrophilic substitution in pyridine 1068
- 30.10 Nucleophilic substitution in pyridine 1069
- 30.11 Basicity of pyridine 1071
- 30.12 Reduction of pyridine 1073
- 31 Macromolecules. Polymers and Polymerization**
- 31.1 Macromolecules 1077
- 31.2 Polymers and polymerization 1078
- 31.3 Free-radical vinyl polymerization 1080
- 31.4 Copolymerization 1083
- 31.5 Ionic polymerization. Living polymers 1084
- 31.6 Coordination polymerization 1087
- 31.7 Step-reaction polymerization 1090
- 31.8 Structure and properties of macromolecules 1093
- 32 Stereochemistry III. Enantiotopic and Diastereotopic Ligands and Faces**
- 32.1 Introduction 1101
- 32.2 Biological oxidation and reduction. Ethanol and acetaldehyde 1101
- 32.3 Biological oxidation and reduction. Deuterium labeling experiments 1103
- 32.4 Biological oxidation and reduction. Stereochemistry 1104
- 32.5 Enantiotopic and diastereotopic ligands 1107
- 32.6 Enantiotopic and diastereotopic faces 1110
- 32.7 Origin of enantiospecificity 1112

PART THREE

Biomolecules

- 33 Lipids *Fats and Steroids***
- 33.1 The organic chemistry of biomolecules 1119
- 33.2 Lipids 1120
- 33.3 Occurrence and composition of fats 1120
- 33.4 Hydrolysis of fats. Soap. Micelles 1124
- 33.5 Fats as sources of pure acids and alcohols 1125
- 33.6 Detergents 1126
- 33.7 Unsaturated fats. Hardening of oils. Drying oils 1127
- 33.8 Phosphoglycerides. Phosphate esters 1128
- 33.9 Phospholipids and cell membranes 1130

- 33.10 Biosynthesis of fatty acids 1132
- 33.11 Steroids 1134

34 Carbohydrates I. Monosaccharides

- 34.1 Introduction 1143
- 34.2 Definition and classification 1144
- 34.3 (+)-Glucose: an aldohexose 1144
- 34.4 (-)-Fructose: a 2-ketohexose 1146
- 34.5 Stereoisomers of (+)-glucose. Nomenclature of aldose derivatives 1146
- 34.6 Oxidation. Effect of alkali 1149
- 34.7 Osazone formation. Epimers 1151
- 34.8 Lengthening the carbon chain of aldoses. The Kiliani-Fischer synthesis 1152
- 34.9 Shortening the carbon chain of aldoses. The Ruff degradation 1154
- 34.10 Conversion of an aldose into its epimer 1154
- 34.11 Configuration of (+)-glucose. The Fischer proof 1155
- 34.12 Configurations of aldoses 1160
- 34.13 Optical families. D and L 1162
- 34.14 Tartaric acid 1164
- 34.15 Families of aldoses. Absolute configuration 1166
- 34.16 Cyclic structure of D-(+)-glucose. Formation of glucosides 1168
- 34.17 Configuration about C-1 1173
- 34.18 Methylation 1174
- 34.19 Determination of ring size 1176
- 34.20 Conformation 1178

35 Carbohydrates II. Disaccharides and Polysaccharides

- 35.1 Disaccharides 1185
- 35.2 (+)-Maltose 1185
- 35.3 (+)-Cellobiose 1188
- 35.4 (+)-Lactose 1189
- 35.5 (+)-Sucrose 1191
- 35.6 Polysaccharides 1192
- 35.7 Starch 1193
- 35.8 Structure of amylose. End group analysis 1193
- 35.9 Structure of amylopectin 1195
- 35.10 Cyclodextrins 1198
- 35.11 Structure of cellulose 1200
- 35.12 Reactions of cellulose 1200

36 Proteins and Nucleic Acids *Molecular Biology*

- 36.1 Proteins 1205
- 36.2 Structure of amino acids 1206
- 36.3 Amino acids as dipolar ions 1208
- 36.4 Isoelectric point of amino acids 1211

36.5	Configuration of natural amino acids	1212
36.6	Preparation of amino acids	1213
36.7	Reactions of amino acids	1215
36.8	Peptides. Geometry of the peptide linkage	1215
36.9	Determination of structure of peptides. Terminal residue analysis. Partial hydrolysis	1217
36.10	Synthesis of peptides	1221
36.11	Proteins. Classification and function. Denaturation	1225
36.12	Structure of proteins	1226
36.13	Peptide chain	1226
36.14	Side chains. Isoelectric point. Electrophoresis	1227
36.15	Conjugated proteins. Prosthetic groups. Coenzymes	1228
36.16	Secondary structure of proteins	1229
36.17	Biochemistry, molecular biology, and organic chemistry	1235
36.18	Mechanism of enzyme action. Chymotrypsin	1236
36.19	Nucleoproteins and nucleic acids	1241
36.20	Chemistry and heredity. The genetic code	1246
