

# SmartPlant Materials

## Excel Import and Export

Version 2011 R1 SP2 (7.1.2)

November 2014

DMAR1-PE-200153B

## Copyright

Copyright © 2012-2014 Intergraph® Corporation. All Rights Reserved. Intergraph is part of **Hexagon**.

Including software, file formats, and audiovisual displays; may be used pursuant to applicable software license agreement; contains confidential and proprietary information of Intergraph and/or third parties which is protected by copyright law, trade secret law, and international treaty, and may not be provided or otherwise made available without proper authorization from Intergraph Corporation.

## U.S. Government Restricted Rights Legend

Use, duplication, or disclosure by the government is subject to restrictions as set forth below. For civilian agencies: This was developed at private expense and is "restricted computer software" submitted with restricted rights in accordance with subparagraphs (a) through (d) of the Commercial Computer Software - Restricted Rights clause at 52.227-19 of the Federal Acquisition Regulations ("FAR") and its successors, and is unpublished and all rights are reserved under the copyright laws of the United States. For units of the Department of Defense ("DoD"): This is "commercial computer software" as defined at DFARS 252.227-7014 and the rights of the Government are as specified at DFARS 227.7202-3.

Unpublished - rights reserved under the copyright laws of the United States.

Intergraph Corporation  
300 Intergraph Way  
Huntsville, AL 35813

## Documentation

Documentation shall mean, whether in electronic or printed form, User's Guides, Installation Guides, Reference Guides, Administrator's Guides, Customization Guides, Programmer's Guides, Configuration Guides and Help Guides delivered with a particular software product.

## Other Documentation

Other Documentation shall mean, whether in electronic or printed form and delivered with software or on Intergraph Smart Support, SharePoint, or box.net, any documentation related to work processes, workflows, and best practices that is provided by Intergraph as guidance for using a software product.

## Terms of Use

- a. Use of a software product and Documentation is subject to the End User License Agreement ("EULA") delivered with the software product unless the Licensee has a valid signed license for this software product with Intergraph Corporation. If the Licensee has a valid signed license for this software product with Intergraph Corporation, the valid signed license shall take precedence and govern the use of this software product and Documentation. Subject to the terms contained within the applicable license agreement, Intergraph Corporation gives Licensee permission to print a reasonable number of copies of the Documentation as defined in the applicable license agreement and delivered with the software product for Licensee's internal, non-commercial use. The Documentation may not be printed for resale or redistribution.
- b. For use of Documentation or Other Documentation where end user does not receive a EULA or does not have a valid license agreement with Intergraph, Intergraph grants the Licensee a non-exclusive license to use the Documentation or Other Documentation for Licensee's internal non-commercial use. Intergraph Corporation gives Licensee permission to print a reasonable number of copies of Other Documentation for Licensee's internal, non-commercial. The Other Documentation may not be printed for resale or redistribution. This license contained in this subsection b) may be terminated at any time and for any reason by Intergraph Corporation by giving written notice to Licensee.

## Disclaimer of Warranties

Except for any express warranties as may be stated in the EULA or separate license or separate terms and conditions, Intergraph Corporation disclaims any and all express or implied warranties including, but not limited to the implied warranties of merchantability and fitness for a particular purpose and nothing stated in, or implied by, this document or its contents shall be considered or deemed a modification or amendment of such disclaimer. Intergraph believes the information in this publication is accurate as of its publication date.

The information and the software discussed in this document are subject to change without notice and are subject to applicable technical product descriptions. Intergraph Corporation is not responsible for any error that may appear in this document.

The software, Documentation and Other Documentation discussed in this document are furnished under a license and may be used or copied only in accordance with the terms of this license. THE USER OF THE SOFTWARE IS EXPECTED TO MAKE THE FINAL EVALUATION AS TO THE USEFULNESS OF THE SOFTWARE IN HIS OWN ENVIRONMENT.

Intergraph is not responsible for the accuracy of delivered data including, but not limited to, catalog, reference and symbol data. Users should verify for themselves that the data is accurate and suitable for their project work.

## Limitation of Damages

IN NO EVENT WILL INTERGRAPH CORPORATION BE LIABLE FOR ANY DIRECT, INDIRECT, CONSEQUENTIAL INCIDENTAL, SPECIAL, OR PUNITIVE DAMAGES, INCLUDING BUT NOT LIMITED TO, LOSS OF USE OR PRODUCTION, LOSS OF REVENUE OR PROFIT, LOSS OF DATA, OR CLAIMS OF THIRD PARTIES, EVEN IF INTERGRAPH CORPORATION HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

UNDER NO CIRCUMSTANCES SHALL INTERGRAPH CORPORATION'S LIABILITY EXCEED THE AMOUNT THAT INTERGRAPH CORPORATION HAS BEEN PAID BY LICENSEE UNDER THIS AGREEMENT AT THE TIME THE CLAIM IS MADE. EXCEPT WHERE PROHIBITED BY APPLICABLE LAW, NO CLAIM, REGARDLESS OF FORM, ARISING OUT OF OR IN CONNECTION WITH THE SUBJECT MATTER OF THIS DOCUMENT MAY BE BROUGHT BY LICENSEE MORE THAN TWO (2) YEARS AFTER THE EVENT GIVING RISE TO THE CAUSE OF ACTION HAS OCCURRED.

IF UNDER THE LAW RULED APPLICABLE ANY PART OF THIS SECTION IS INVALID, THEN INTERGRAPH LIMITS ITS LIABILITY TO THE MAXIMUM EXTENT ALLOWED BY SAID LAW.

## Export Controls

Intergraph Corporation's software products and any third-party Software Products obtained from Intergraph Corporation, its subsidiaries, or distributors (including any Documentation, Other Documentation or technical data related to these products) are subject to the export control laws and regulations of the United States. Diversion contrary to U.S. law is prohibited. These Software Products, and the direct product thereof, must not be exported or re-exported, directly or indirectly (including via remote access) under the following circumstances:

- a. To Cuba, Iran, North Korea, Sudan, or Syria, or any national of these countries.
- b. To any person or entity listed on any U.S. government denial list, including but not limited to, the U.S. Department of Commerce Denied Persons, Entities, and Unverified Lists, <http://www.bis.doc.gov/complianceandenforcement/liststocheck.htm>, the U.S. Department of Treasury Specially Designated Nationals List, <http://www.treas.gov/offices/enforcement/ofac/>, and the U.S. Department of State Debarred List, <http://www.pmddtc.state.gov/compliance/debar.html>.
- c. To any entity when Licensee knows, or has reason to know, the end use of the Software Product is related to the design, development, production, or use of missiles, chemical, biological, or nuclear weapons, or other un-safeguarded or sensitive nuclear uses.
- d. To any entity when Licensee knows, or has reason to know, that an illegal reshipment will take place.
- e. Any questions regarding export or re-export of these Software Products should be addressed to Intergraph Corporation's Export Compliance Department, Huntsville, Alabama 35894, USA.

## Trademarks

Intergraph, the Intergraph logo, Intergraph Smart, PDS, SmartPlant, SmartMarine, FrameWorks, I-Sketch, IntelliShip, ISOGEN, SmartSketch, SPOOLGEN, SupportManager, SupportModeler, Sapphire, and FreeView are trademarks or registered trademarks of Intergraph Corporation or its subsidiaries in the United States and other countries. # Preface

This document describes the Excel import and export features of SmartPlant Materials.

## SECTION 1

# Setup

To enable the Excel import and export features in SmartPlant Materials, ensure that the requirements that are described in this section are fulfilled.

## Software Prerequisites

Microsoft Excel 2007 or 2010 must be installed on the Oracle application server.

## Excel Templates

The Excel import feature uses pre-defined templates. These templates are delivered with the software and installed on the application server in the <SPMAT>\others\excel\_templates folder. The template directory is determined by the DBA setting PRINT\_TO\_FILE\_DEST. For an overview of the available templates, see *Appendix: Templates* (on page 87).

## DBA Settings

You can find a detailed description of how to set DBA settings and the purpose and usage of each DBA setting in the *SmartPlant Materials DBA Settings* document, available from the **Printable Guides** page in the software.

The DBA settings needed for the Excel export and import are listed below.

### General

EXCEL\_DATE\_FORMAT - Excel date format.

EXCEL\_FUNCTION\_IF - The IF keyword in the language of the local Excel installation.

EXCEL\_FUNCTION\_SUM - The SUM keyword in the language of the local Excel installation.

EXCEL\_MAX\_LINES - Maximum number of lines for Excel output.

IMPORT\_FROM\_FILE\_DEST - Name of the directory on the application server where an uploaded Excel import file is stored.

PRINT\_TO\_FILE\_DEST - Name of the directory used by the Print to File functionality.

PRINT\_TO\_FILE\_SEP - The separator character for CSV file generation (Export format='Excel') in the language of the local Excel installation. Default value = ;

PRINT\_TO\_FILE\_URL - The URL for accessing the created file via http.

SERVLET\_PATH - Path in the file system of the application server, including the name of the application server. This path is used for loading the upload servlet.

XLS\_FORMAT - Extension of the Excel files, xls or xlsx.

### SPRD

COMPANY\_IDENT\_DOWNLOAD\_DEST - Destination directory for download of company ident files.

COMPANY\_IDENT\_DOWNLOAD\_URL - Virtual directory for downloaded company ident files.

COMPANY\_IDENT\_UPLOAD\_DEST - Destination directory for upload of company ident files.

### BOM

BOM\_EXCEL\_MPV\_EXPORT\_TEMPLATE - Name of the multi position values export template.

BOM\_EXCEL\_SPV\_EXPORT\_TEMPLATE - Name of the single position values export template.

BOM\_EXCEL\_TEMPLATE\_DIR - Directory for BOM Excel templates.

### MSCM

BID\_EXPORT\_DEST - Destination for Excel export of bids.

BID\_EXPORT\_URL - Virtual directory for Excel export of bids.

BID\_IMPORT\_PATH - Database server path for bid load.

MS\_DOWNLOAD\_DEST - Destination for Excel export of requisition milestones.

MS\_DOWNLOAD\_URL - Virtual directory for a downloaded and generated Excel export file from requisition milestones.

OPI\_IMPORT\_PATH - Database server path for OPI import.

OPI\_UPLOAD\_DEST - Destination path on the application server where the imported files are stored.

OPI\_UPLOAD\_URL - Virtual directory for OPI import.

### Site

MTR\_DOWNLOAD\_URL - Virtual directory for a downloaded MTR file.

MTR\_UPLOAD\_DEST - Directory on the application server where an uploaded MTR Excel import file is stored.

### Others

PRICE\_LIST\_EXPORT\_DEST - Destination for download of price list Excel files.

PRICE\_LIST\_IMPORT\_DEST - Destination for upload of price list Excel files.

## Project Defaults

You can find a detailed description of how to set project defaults and the purpose and usage of each project default in the *SmartPlant Materials Project Defaults* document, available from the **Printable Guides** page in the software.

The project defaults needed for the Excel export and import are listed below.

ZP\_TP\_BID - Template file name (without path) for the bid export from P.30.24.

ZP\_TP\_PCO - Template file name (with entire path) for the PCO (Potential Change Order) export from SM.40.01.

ZP\_TP\_PK - Template file name (with entire path) for the package export/import (without release notes) from P.70.74.

ZP\_TP\_PKRN - Template file name (with entire path) for the package export/import (with release notes) from P.70.74.

ZP\_TP\_TRFC - Template file name (with entire path) for the traffic data export from P.80.51.

ZP\_TPL\_XLS - Template file name for the expediting export/import from P.70.71.

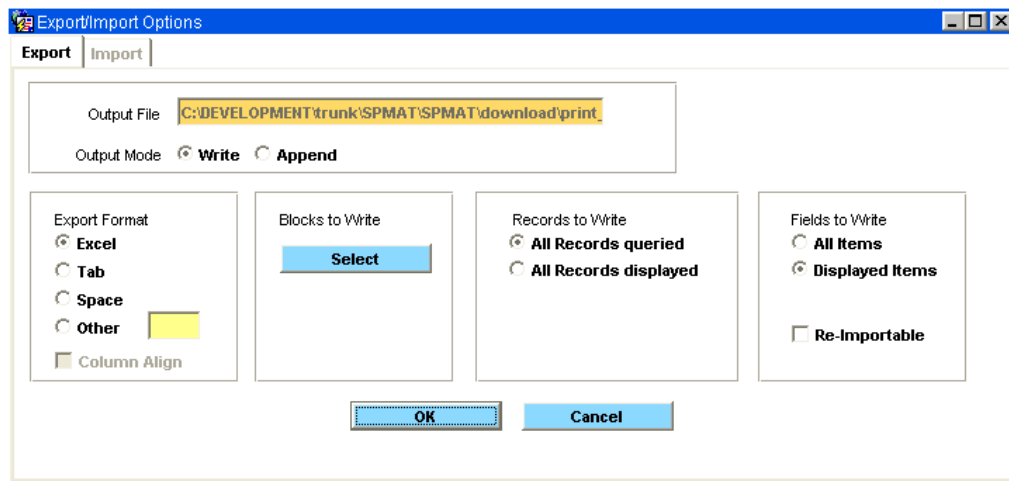

## SECTION 2

# General Excel Export

You can use the **Excel Export**  button in all SmartPlant Materials screens to export the displayed data to an Excel file.

1. Click the **Excel Export**  button. The **Export/Import Options** window opens where you can specify how to store the data.

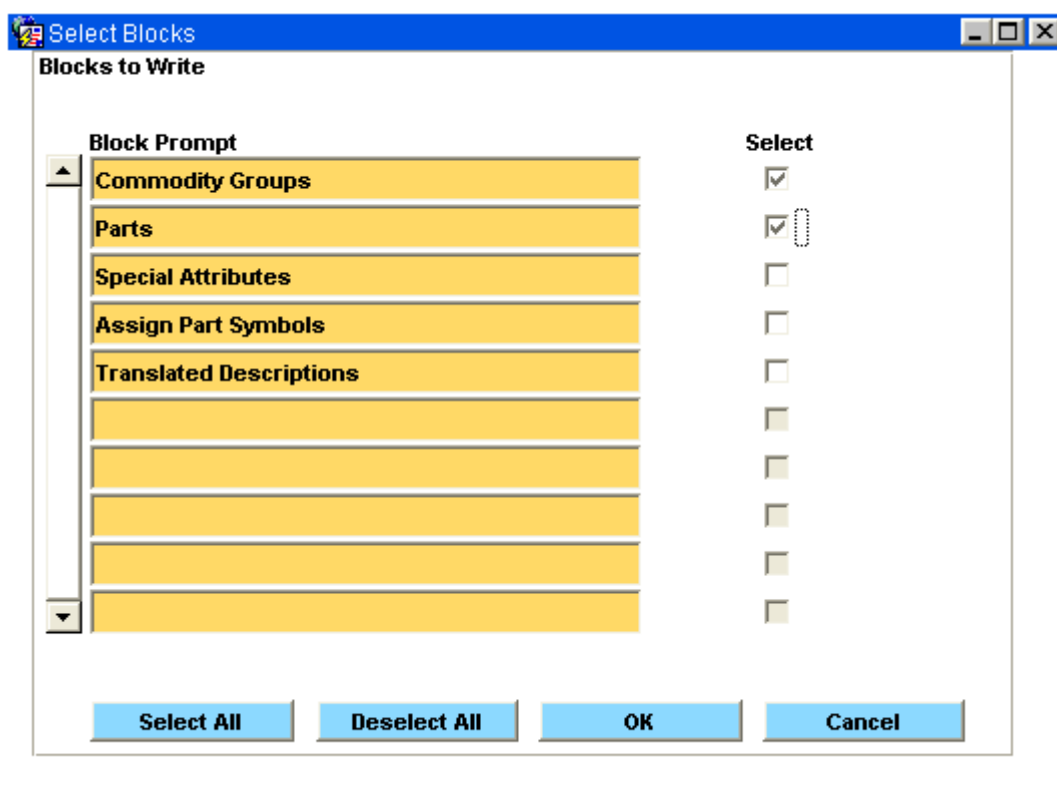

The **Export/Import Options** dialog box is shown with the **Export** tab selected. It contains the following fields and options:

- Output File:** A text field containing the path `C:\DEVELOPMENT\trunk\SPMAT\SPMAT\download\print`.
- Output Mode:** Radio buttons for **Write** (selected) and **Append**.
- Export Format:** Radio buttons for **Excel** (selected), **Tab**, **Space**, and **Other**. A yellow box is next to the **Other** option. Below these is a **Column Align** checkbox.
- Blocks to Write:** A button labeled **Select**.
- Records to Write:** Radio buttons for **All Records queried** (selected) and **All Records displayed**.
- Fields to Write:** Radio buttons for **All Items** and **Displayed Items** (selected). Below these is a **Re-Importable** checkbox.
- Buttons:** **OK** and **Cancel** buttons at the bottom.

The **Output File** field displays the name of the output file with the entire path. The name is automatically generated by the software and cannot be changed.

In the **Export Format** section, you specify how the text is formatted in the file. Select **Excel** if you want to export the data into a semicolon separated Excel file. The other options create plain ASCII (txt) files with a tab, a space, or any other specified character as a separator. To align the columns, select the **Column Align** check box.

- Click **Select** in the **Blocks to Write** section to open the **Select Blocks** window.

- Select the **Select** check boxes of all screen blocks to be exported to the file and click **OK**.  
You can specify the records to be stored in the file in the **Records to Write** section.
- Select **All Records queried** to export all queried records or **All Records displayed** to export only the records currently displayed on the screen.

You can also specify the fields to be stored in the file in the **Fields to Write** section. With **All Items** selected, the job exports all fields on the screen, whereas **Displayed Items** exports the currently displayed fields only. With the **Re-Importable** indicator selected, the data is exported in a format that allows re-import into SmartPlant Materials where applicable.

- Click **OK** to start the export. The picture below shows an example file.

For more information, see *Print to File* in the *SmartPlant Materials User Interface Basics* document, available from the **Printable Guides** page in the software.

## SECTION 3

# Branch Chart Export

On the **S.40.05 Branches** screen, you can export branch charts to an Excel file using the **Branch Chart** button.

Select a branch table and click **Branch Chart** to export the selected table. The **Branch Chart** button is also available on Window 2. The picture below shows an example file.

2BD03\_90-Branch 90  
Legend and Chart

BRANCH SIZE	36	34	32	30	28	26	24	20	18	16	14	12	10

E/SP	Forged flt & olets/Sweepolet,												

## SECTION 4

# Company Ident Export/Import

On the **S.80.C.01 Company Idents** screen, you can export company idents to an Excel file or import from an Excel file.

### Setup

To enable this feature, you must set up the following:

1. Create a Where condition for module S80C01 on the **A.60.06 Where Conditions** screen.

With this Where condition you define which idents are to be exported. For more information, see *Where Conditions* in the *SmartPlant Materials Administrator's Guide*, available from the **Printable Guides** page in the software.

2. Define DBA setting values on **A.60.04 DBA Settings**:
  - COMPANY\_IDENT\_DOWNLOAD\_DEST - Destination directory for download of company ident files.
  - COMPANY\_IDENT\_DOWNLOAD\_URL - Virtual directory for downloaded company ident files.
  - COMPANY\_IDENT\_UPLOAD\_DEST - Destination directory for upload of company ident files.
3. Ensure that the template file COMP\_IDENT\_TEMPLATE.xls is available. You can usually find this file in the ..\others\excel\_templates folder on the application server.

### Export or Import

1. Click the **Export/Import Company Idents** button on Window 2 of **S.80.C.01 Company Idents**. Window 3 opens as shown in the picture below.

S.80.C.01 Company Idents: Window 3  
Company Idents - Export/Import

**Export**

Where Condition for Idents: S80C01\_ALL\_IDENTS    Short Desc: All Idents    Description: All Idents    **Export**

**Import**

Import Path: C:\DEVELOPMENT\TRUNK\SPMAT\SPMAT\DOWNLOAD\    **Default Dir**    **Import**

File Name:    **Upload**

**Online Progress**

Log File Name:    **View Log**

2. For an export operation, select a pre-defined Where condition from the LOV, and click the **Export** button.

When the export operation is finished, you can download the created Excel file.

INTERGRAPH

IDENT CODE	COMPANY	COMPANY NAME	SEQ	COMPANY IDENT CODE	NLS <<>>	SHORT DESC <<>> DESCRIPTION
170191218	RS001	RS-Construction	1	RS-70012	1 <<>>	Hefesilo <<>> Silo zur Herstellung von Backhefe

3. For an import operation, click the **Upload** button to upload the Excel sheet with the ident codes from your local computer to the application server.
4. When this is done, click the **Import** button to start the import from the Excel file.

## SECTION 5

# SmartPlant 3D Excel Sheets

On the **SP3D 20.01 Export Jobs** screen, you can click the **Start Job** button to create SmartPlant 3D Excel workbooks. These workbooks can be downloaded and bulkloaded into SmartPlant 3D.

For more information, see *Transfer to SP3D* in the *SmartPlant Reference Data Smart 3D Interface User's Guide*, available from the **Printable Guides** page in the software.

## SECTION 6

# BOM Excel Export

On the **B.20.01.44 List Download** screen, you can download BOM data (nodes, positions, attributes) to an Excel file.

**NOTE** The DBA settings BOM\_EXCEL\_MPV\_EXPORT\_TEMPLATE, BOM\_EXCEL\_SPV\_EXPORT\_TEMPLATE, BOM\_EXCEL\_TEMPLATE\_DIR, BOM\_DOWNLOAD\_DEST, and BOM\_DOWNLOAD\_URL must be set before starting a list download.

Open this screen from **B.20.03 Adv. Maintain BOM**, and select the **List Download** option from the shortcut menu in the BOM tree. The **B.20.01.44 List Download** screen opens, with the selected node shown in the **BOM Path** field on top.

The screenshot shows the 'B.20.01.44 List Download' window. It has a title bar with the window name and standard OS controls. The main content area is titled 'List Download'. It contains several sections: 'Download will be started for' with a 'BOM Path' field containing '/PIPING/AK/AKAF1'; 'Into Export File' with radio buttons for 'OMI Export' and 'Excel Export' (selected), a 'Physical Path' field containing 'C:\DEVELOPMENT\trunk\SPMAT\SPMAT\download\' and a 'Physical Filename' field; 'BOM Data Options' with checkboxes for 'with Structure' (checked), 'with Position' (checked), and 'without Assemblies' (selected), and radio buttons for 'with BOM-Assemblies', 'with Assemblies by Req Rule', and 'with Assemblies by Constr Rule'; 'Where Condition' with 'Name' and 'Short Desc' fields; 'Issue Status' with radio buttons for 'Selected' (checked), 'Best Quantity', 'Lowest', and 'All (Re-Import not possible)'; 'BOM Attribute Options' with radio buttons for 'With Attributes for Re-Import' (checked), 'With directly assigned Attributes in User BOM View', 'With all Attributes in User BOM View', and 'With all Attributes'; and 'Start' and 'Cancel' buttons at the bottom right.

In the **Into Export File** section, select the **OMI Export** or **Excel Export** option. The download path assigned to the DBA setting BOM\_DOWNLOAD\_DEST is displayed in the **Physical Path** field. Enter the name of the file to be created in the **Physical Filename** field.

In the **BOM Data Options** section, select the **with Structure** check box to export the BOM structure also. Select the **with Position** check box to export the BOM positions assigned to the selected nodes.

Use the **with Positions** options to determine the complexity of the download. Select one of these options:

- **without Assemblies** - The assembly structures present in the BOM positions are not downloaded.
- **with BOM-Assemblies** - Assemblies are exploded and downloaded according to the BOM Copy rule assigned to the ZB\_COCP project default.
- **with Assemblies by Requisition Rule** - Assemblies are exploded and downloaded according to the BOM Copy rule assigned to the ZR\_COREQ project default.
- **with Assemblies by Construction Rule** - Assemblies are exploded and downloaded according to the BOM Copy rule assigned to the ZB\_COCON project default.

Select an option from the **Issue Status** radio group. The available options are listed below.

- **Selected** - You must select a particular issue status from the LOV in the **Issue Status** field. Only this selected issue status of the positions is exported.
- **Highest** - Only the highest issue status of the positions is exported.
- **Lowest** - Only the lowest issue status of the positions is exported.
- **All** - The positions are exported with all issue statuses, and re-import of the exported data is not possible.

In the **BOM Attribute Options** section on the right, you define which attributes are exported. The available options are:

- **With Attributes for Re-Import** - With this option, attributes directly assigned to each position are exported. To prevent import processing performance being negatively affected, no attributes are downloaded in duplicate within the path.
- **With directly assigned Attributes in User BOM View** - Only node and position attributes that were directly allocated through the node type or the discipline allocation are exported.
- **With all Attributes in User BOM View** - The node and position attributes that are defined in the current BOM view, used by the user who called this function, are exported.
- **With all Attributes** - With this option, all variable attributes for each selected node and each position are exported.

To start the list download, click **Start**. After downloading, you can open or save the file. An example file appears in the picture below.

For more information, see *List Download* in the *SmartPlant Materials E&PI (BOM) User's Guide*, available from the **Printable Guides** page in the software.

## SECTION 7

# BOM Excel Import

On the **B.40.01 BOM Import** screen, you can (re-) import BOM data from an Excel workbook in two different ways.

- Select the **From Excel Multi-position Template** option from the drop-down list in the **Data Source** field.
- Select the **Flat Loading Config** option from the drop-down list in the **Data Source** field, and select **Excel File** from the drop-down list in the **Load Option** field in the **FLC** section.

## Multi-Position Template

Perform the BOM import with the From Excel Multi-position Template option to re-import an Excel file that was created using the List Download functionality. For more information, see *BOM Excel Export* (on page 21).

The screenshot displays the 'B.40.01 BOM Import' window. It features a 'View Option' section with 'Simple View' and 'Complete View' (selected). A 'Sort Order' section has 'Job Code' and 'Recent Run' (selected). The 'Job Information' section includes fields for 'Job Code' (RS-OMI-0001), 'Job Status' (NEW), 'Data Source' (From Excel Multi-position Template), 'Import Path' (C:\DEVELOPMENT\trunk\SPMAT\SPMAT\download\), 'Import File' (OMIJD35586), and 'User Comment'. The 'Advanced Options' section contains checkboxes for 'Import Fab Spools', 'Map CCs/Idents', 'Append', and 'Transfer Site Qty' (checked), along with 'Company Code' and 'Company Name' fields. The 'FLC' section has 'Config Name', 'Delimiter', 'Skip Lines' (0), 'Load Option', and 'Pit Stop' (unchecked). The 'Runtime Options' section includes a table for 'Issue Status' and 'List Status', and checkboxes for 'Transfer', 'Find Ident', 'Next Issue Status', 'Check Consistency', 'Recognize', 'Rev +1', and 'Lock BOM'. The 'Job Execution Statistics' section shows 'Job Start User', 'Start Date', 'End Date', 'Log File', 'Error Report', and 'Execution Summary'. The 'Job Control' section contains buttons for 'Start', 'Restart Job', 'Clear Import Data', 'Delete Job', 'Cancel Job', 'View SQL\*Loader Log File', 'View Import Protocol', and 'Clear Info Panel'.

For more information, see *Data Import* in the *SmartPlant Materials Open MTO Interface (OMI)* documentation, available from the **Printable Guides** page in the software.

### Flat Loading Config

The FLC (Flat Loading Config) method is an easy way to import BOM data into SmartPlant Materials. Collect your data in an Excel workbook, define the column mappings in SmartPlant Materials, and start the Flat Loading Config import.

1. Collect your data in an Excel workbook. Use this workbook for the import, or generate a csv file that contains the columns of the data separated with a freely definable separator.
2. Define the column mapping so that SmartPlant Materials knows the meaning of the columns in the Excel or csv file.
3. Start the import.

For more information, see *Flat Loading Config Import* in the *SmartPlant Materials Open MTO Interface (OMI)* documentation, available from the **Printable Guides** page in the software.

## SECTION 8

# Requisition Excel Import

On the **R.40.03 ORI - Import Jobs** screen, you can import requisition data from an Excel workbook.

The screenshot displays the 'R.40.03 ORI - Import Jobs' window, titled 'Open Requisition Interface - Import Jobs'. The interface is divided into four main sections:

- Job Information:** Contains fields for Job Code (GPU121211-002), Job Status (READY), Processing Mode (Insert Mode), Data Source (From Excel Template), Import Path (C:\DEVELOPMENT\trunk\SPMAT\download\), Import File (ORIJD7204.xls), and a User Comment field. An 'Upload' button is next to the Import File field.
- Job Execution Statistics:** Contains fields for Job Start User (RW), Start Date (12-DEC-2011 18:21:34), End Date (12-DEC-2011 18:21:36), Log File (D:\oradata\md\utl\ORI\_IMPORT\_355364.log), and an Execution Summary field with a scrollable area.
- Job Options:** A list of checkboxes for Technical Evaluation, Get Budget, Get Weight, Get ROS Date, Get Designation, and General CIP Procedure.
- Job Control:** Contains two buttons: 'Start' and 'View Online Log'.

For more information, see the *SmartPlant Materials Open Requisition Interface (ORI)* documentation, available from the **Printable Guides** page in the software.

## Bid Export/Import

**NOTE** The DBA settings `BID_EXPORT_DEST`, `BID_EXPORT_URL`, and `BID_IMPORT_PATH` must be set before you download or load a bid.

## Download Bids

[illegible]

## Bid Export/Import

Select the **Download** check box for all quotes to be downloaded, and click **Download** to start the bid download. An example file appears below.

	A	B	C	D	E	F	G	H

## SECTION 10

# Agreement Import

On the **OPI.10.01 OPI - Import Jobs** screen, you can import agreement data from an Excel sheet.

**NOTE** The DBA settings OPI\_IMPORT\_PATH, OPI\_UPLOAD\_DEST, and OPI\_UPLOAD\_URL must be set before importing agreement data using OPI.

OPI.10.01 OPI - Import Jobs

Open Procurement Interface - Import Jobs

**Job Information**

Job Code: 52342-1    Type: OPI - Excel    Reset Order: ☐    Job Status: NEW

Import Path: C:\DEVELOPMENT\trunk\SPMAT\SPMAT\download\

**Job Control**

Start    View Online Log    View Error Log

To import an agreement from an Excel workbook, select the **OPI - Excel** type, click **Upload** to upload the Excel workbook, and click **Start** to run the import job.

For more information, see the *SmartPlant Materials Open Procurement Interface (OPI)* documentation, available from the **Printable Guides** page in the software.

## SECTION 11

# Req Planning Export/Milestone Import

On the **P.60.03 Requisition Planning** screen, you can export requisition planning data with assigned milestones to an Excel workbook. After editing the milestone dates on this workbook, you can import the milestone dates from this Excel workbook.

The screenshot shows the 'P.60.03 Requisitions Planning' window. The 'MILESTONE PLANNING' tab is active. At the top, there's a 'Planned Requisitions' section with a table showing requisition details like 'Engineering Requisition', 'Scope', 'Origin', 'Requisition Type', 'Agreement Type', 'Short Desc', and 'Description'. Below this is a 'Drag and Drop' checkbox and an 'Ordered by' dropdown set to 'Engineering Requisition'. A table of requisitions is visible, with the first row showing 'MKO-2051' under 'Engineering Requisition' and 'Unrestricted' under 'Scope'. Below the table are buttons: 'Order By ...', 'Attributes', 'Calc All Forecasted', 'Export', 'Import', and 'Create Inquiry'. The main area of the window is a detailed milestone planning table. It has tabs: 'General', 'MILESTONE PLANNING' (selected), 'Responsibilities', 'Strategies', 'Potential Bidders', and 'Planning History'. The table is titled 'Ordered by Order Seq'. It has columns: 'Label', 'Order Seq', 'Planned', 'Span Days', 'Forecasted', 'Actual', 'Orig. Days', 'Days', 'Days Late', 'Orig. MH', 'MH', and '1st P'. The table contains 10 rows of milestones, starting with 'ER CREATED' (Order Seq 400) and ending with 'FINAL INSPECTION' (Order Seq 490). Each row shows dates for 'Forecasted' and 'Actual' milestones, along with 'Orig. Days', 'Days', 'Days Late', and 'Orig. MH' values. At the bottom of the table are buttons: 'Order By ...', 'Attributes', 'Calculate Planned', 'Delete Planned', 'Lock Plan', 'Calculate Forecasted', and 'Delete Forecasted'.

Select the **Sel** check box of all planned requisitions to be exported, and click **Export**. When the export succeeds, you can open or save the file. An example file appears below.

The screenshot shows the 'SmartPlant Materials' window. It has a header with 'Project' (RS) and 'Description' (AKPO und TAKKPO und KNACKPO huch). Below this is a section titled 'Planned Requisition Milestones' with a table. The table has columns: 'Engineering Requisition', 'Description', 'Dates', 'ACKNOWL.', 'MKO-TEST', 'KOM', and 'FIRST D.'. The first row shows 'MKO-2051' under 'Engineering Requisition' and 'MKO-2051' under 'Description'. Below the table are buttons: 'Planned:', 'Forecast:', and 'Actual:'. At the bottom of the window is a status bar with 'Tabelle1' and a refresh icon.

After editing the Excel workbook, you can import milestone labels of planned requisitions into SmartPlant Materials. Click **Import**, and a browser window opens. Click **Browse**, select the file, and click **Submit Query**. The selected file is uploaded to the application server. Close the browser window.

On the **Export/Import Options** window, click **OK** to continue.

For more information, see *Requisitions Planning* in the *SmartPlant Materials MSCM User's Guide*, available from the **Printable Guides** page in the software.

## Expediting Export/Import

For more information about expediting, see *Expediting* in the *SmartPlant Materials MSCM User's Guide*, available from the **Printable Guides** page in the software.

To export expediting data of a purchase order to an Excel file, select the order on the **P.70.71 Expediter Workload** screen, and click **Export**.

A box opens, displaying the name and path of the template.

This information is retrieved from the project default ZP\_TPL\_XLS. You can select another template using the LOV in the **Template for Export** field. Click **Export** to continue.

The **File Download** box is displayed. Click **Open** to open the created Excel file, or click **Save** to save the file to a folder on your file system.

## Split Item Shipments

A split shipment is normally used with bulk material (SOT items, Standard withOut Tag). A shipment is often split because the supplier agrees to split the delivery after the agreement is placed. For example, partial shipments due to a large amount require a split of an item shipment.

	1	2	3	4	5	6	7	8	9	10	11	12

18	Split	Pos	Sub	Is Pos	IS Sub	Suppl	Acknow	Ident Code	Ident Short Description	Tag Number	Tag Description (only for import)	
	ISU	MCS	Idc	RN	MFAT	INTERNAL		ADDITIONAL CODE				

The supplier creates the number of splits he needs, copies the value of the original line, and adjusts the **IS Sub** field to 2, 3, 4, and so on.

The supplier sends the updated Excel sheet back to you. This updated Excel sheet can be imported into SmartPlant Materials to add or update item shipment data. For more information, see *Import Expediting Data* (on page 42).

The loaded item shipment data can be viewed on the **Item Shipment** tab of P.70.72.

Pos	Sub	IS Pos	IS Sub	Suppl	Acknow	Engineering Requisition	ER Suppl	RLI Pos	RLI Sub	Tag Number	Ident Code	Sel	Commodity Code	Item Type	Size 1	Size 2	Size 3	Size 4	Size 5	Proc

1	1	1	2	0		RS-EQU-001	0	1	1	RS-X-2010-096	70331515		CC4613427	TAG ATTRBS	0	0	0	0	70331515	
1	1	1	3	0		RS-EQU-001	0	1	1	RS-X-2010-096	70331515		CC4613427	TAG ATTRBS	0	0	0	0	70331515	
1	1	1	4	0		RS-EQU-001	0	1	1	RS-X-2010-096	70331515		CC4613427	TAG ATTRBS	0	0	0	0	70331515	

## Split Tags

When the requisition/purchase order contains tagged items that during the expediting/inspection/packaging stage require a more detailed breakdown, the Split Tag function allows the supplier to provide this information by using the Excel template. An example of this information is a vessel and template, and only the vessel was specified as a purchase order line item. The template provides these details.

After exporting the purchase order to an Excel file, send this file to the supplier, who can now create the split tags.

In the **Split** column (the first column), X indicates original items and D indicates splits.

Review the information to ensure that all split tags receive a new tag number. If there is not a new tag number, there will be loading errors when importing the Excel file. After the supplier is done with his review, he returns the completed file. This updated Excel sheet can be imported into SmartPlant Materials to add or update item shipment data. For more information, see *Import Expediting Data* (on page 42).

The loaded item shipment data can be viewed on the **Item Shipments** tab of P.70.72.

## MCS (Material Certificate Summary)

Material certification papers from suppliers certify the material quality. These papers typically come from the manufacturer, for example, a steel mill.

You can export with or without MCS. This setting is controlled by the **Without MCS** indicator on the box (Window 2) that opens when you click **Export** on P.70.71.

**NOTE** If you export with MCS, you must first create the MCS header on **P.70.72 Expediting Details**.

## Expediting Export/Import

Send the exported Excel workbook to the supplier to complete. If the purchase order was exported without MCS, the supplier first creates an MCS number and date on the MCS sheet. An example MCS sheet appears below.

	A	B	C	D	E	F	G	H
1	<b>SmartPlant Materials Expediting Export</b>							
2								
3	<b>MCS</b>

You can also view the loaded data on the **MCS** tab of P.70.72.

MCS Number	MCS Date	MCS Quantity	Quantity Unit
RS-2011-0127	26-OCT-2011	1,000	EA

## IRC (Inspection Release Certificate)

The Inspection Release Certificate (IRC) process is completed by the shop inspector, unlike the Material Certificate Summary (MCS) process, which is completed by the supplier. The IRC process can work in these two ways:

- The supplier gives a copy of the MCS template to the inspector during the shop visit.
- The expeditor/inspection coordinator issues the IRC template to the inspector.

For the second way, send the exported Excel workbook to the inspector to complete. The inspector will first create an IRC number and date on the **IRC** sheet as displayed below.

	A	B	C	D	E	F	G	H
1	SmartPlant Materials Expediting Export						INTERGRAPH	
2								
3	IRCs							
4								
5	IRC Number							
6	IRC Date							
7	Actual Inspection Date							
8	IRC-RS-2011-1044 26.10.2011 17.10.2011							

Then, the inspector adds this IRC number to the correct items on the **ISH** sheet, adds the date, and identifies the IRC quantity and weight.

	BE	BF	BG	BH	BI
18	IRC Number				
19	IRC Date				
20	IRC Quantity				
21	IRC Weight				
22	Total IRC Weight				
23	IRC-RS-2011-1044 26-Oct-11 1,000 0,000 0,000				

## Expediting Export/Import

The inspector sends the updated Excel workbook back to you. This updated Excel sheet can be imported into SmartPlant Materials to add or update the IRC data. For more information, see *Import Expediting Data* (on page 42).

The loaded IRC data can be viewed on the **Item Shipments** tab of P.70.72.

Pos	Sub	IS Pos	IS Sub	Suppl	Acknow	Engineering Requisition	ER Suppl	RLI Pos	RLI Sub	Tag Number	Ident Code	Sel	IRC Number	IRC Date	IRC Quantity	IRC Weight	Total IR
1	1	1	1	1	0	RS-EQU.001	0	1	1	RS-X.2010.0961	170331515		IRC-RS-2011-1044	26-OCT-2011	1.000	0.000	
1	1	1	2	0		RS-EQU.001	0	1	1	RS-X.2010.0961	170331515		IRC-RS-2011-1044	26-OCT-2011	2.000	0.000	
1	1	1	3	0		RS-EQU.001	0	1	1	RS-X.2010.0961	170331515		IRC-RS-2011-1044	26-OCT-2011	2.000	0.000	

You can also view the loaded data on the **IRCS** tab of P.70.72.

IRC Number	IRC Date	IRC Quantity	Quantity Unit	Actual Inspection Date	Ready for Approval	Approved by	Approve
IRC-RS-2011-1044	26-OCT-2011	5.000	EA	17-OCT-2011			

## RN (Release Notes)

The RN (Release Note) is usually entered by the expeditor/traffic coordinator in SmartPlant Materials before the supplier uses the data to indicate which items to apply to this RN. The release note (or shipping note) documents the shipment of the materials.

Create a release note on the **Release Notes** tab of the **P.70.72 Expediting Details** screen.

Release Note Number	OSD Traffic	OSD Site	Delivery Type	Delivery Designation	Routing Method	Incoterm	Delivery Place	Release Note Date	Delivery Date	Ready Date
RN-RS-2011-GR1901			GRINAKE	GRINAKE	GRINE SFCCA	DDP	NEWZEELAN	26-OCT-2011	24-DEC-2011	

Close P.70.72 to return to **P.70.71 Expediter Workload**, and click **Export** to export the selected purchase order to an Excel workbook.

You can view the release note data on the RN sheet.

Release Note Number	OSD Traffic	OSD Site	Delivery Type	Delivery Designation	Routing Method	Incoterm	Delivery Place	Release Note Date	Delivery Date	Total Weight	Weight Unit	Total Cost
RN-RS-2011-GR1901	N	N	GRINAKE	GRINAKE	GRINE SFCCA	DDP	NEWZEELAN	26-Oct-11	24-Dec-11	0.000	KG	3000.00 €

## Expediting Export/Import

You can view the heat number data on the **HEAT** sheet.

**SmartPlant Materials Expediting Export**

**Heat Numbers**

Pos	Sub	IS Pos	IS Sub	Suppl	Ident Code	Tag Number	Commodity Code	Size 1	Size 2	Size 3	Size 4	Size 5	Item Ship Quantity	Quantity Unit
1	1	1	1 0	I70331515	RS-X-2010-0:CC4613427	0	0	0	0	0	0	0	70331515	1,000 EA
1	1	1	2 0	I70331515	RS-X-2010-0:CC4613427	0	0	0	0	0	0	0	70331515	2,000 EA
1	1	1	3 0	I70331515	RS-X-2010-0:CC4613427	0	0	0	0	0	0	0	70331515	1,000 EA
1	1	1	4 0	I70331515	RS-X-2010-0:CC4613427	0	0	0	0	0	0	0	70331515	1,000 EA

Send the file to the supplier. The supplier adds the heat numbers, certificates, and so forth.

After the supplier has finished entering the data and sent back the Excel file, you are ready to issue the file to the expeditor/traffic coordinator. The expeditor/traffic coordinator imports the updated file. For more information, see *Import Expediting Data* (on page 42).

The loaded heat data can be viewed on the **Heat Numbers** tab of **P.70.72 Expediting Details**.

**P.70.72 Expediting Details**

2. Click the **Excel Export** button.

3. Select the **Import** tab on the **Export/Import Options** dialog box.

The dialog box titled "Export/Import Options" has two tabs: "Export" and "IMPORT". The "IMPORT" tab is selected. It contains the following fields and options:

- Input Directory:** A text field containing "C:\DEVELOPMENT\trunk\SPMAT\SPMAT\download\".
- Input File:** An empty text field.
- Browse:** A blue button next to the Input File field.
- Import Mode:** A group box containing four checkboxes:
  - ☒ **Insert**
  - ☒ **Update**
  - ☐ **Delete**
  - ☐ **Cascading**
- Error Handling:** A group box containing three radio buttons:
  - ☐ **Ignore Error**
  - ☒ **Stop on Error**
  - ☐ **Rollback on Error**
- OK** and **Cancel** buttons at the bottom.

The available **Import Mode** options are:

- **Insert** - Creates new item shipments/MCS/IRCs/heat numbers
  - **Update** - Updates existing item shipments/MCS/IRCs/heat numbers
  - **Delete** - Any item shipments/MCS/IRCs/heat number that do not exist in the import file are deleted. (Use this option with caution).
  - **Cascading Delete** - Deleting release notes and/or IRCs will set the corresponding values in the affected item shipments to empty.
4. Select the **Insert** and **Update** check boxes.
5. Select the **Stop on Error** option.
6. Click **Browse** to navigate to the file you want to import. A browser window opens.

The browser window titled "SPMAT Upload Files" displays the following content:

## Upload of an IMPORT file to the application server

Which file do you want to upload?

If you upload large files, the response may take a little while, due to the amount of transmitted data.

## Expediting Export/Import

- Click **Browse** to navigate to the file you want to import.

- Select the file and click **Open**.

- After the **Upload Feedback** message appears, close the window.
- Click **OK** on the **Export/Import Options** window.
- When the import finishes successfully, click **OK** to acknowledge the message.

## Expediting Template Fields

The fields of the expediting template are listed below with their descriptions. The **Mandatory** column indicates if the field must be filled (Mandatory=Y) to ensure a successful import. These columns are highlighted with a green background color on the sheet.

Data in fields with names enclosed by ## are imported to SmartPlant Materials. Fields with names enclosed by \*\* are not considered by the import.

## Modifying the Excel Template

The supplied template can be modified according to the following rules:

- It is not allowed to modify the names of the sheets (ISH, MCS, IRC, RN, HEAT, INTERNAL).
- The display of data is controlled by identifiers in the following format:  
#FIELD\_NAME#  
\*FIELD\_NAME\* - Using this format excludes the field from the import. There is no difference in the created export file.
- The start identifier of each data block (#ORDER#, #ISH#, #MCS#, #RN#, #HEAT#) cannot be omitted.
- The end identifiers of each block (#END\_ISH#, #END\_MCS#, #END\_RN#, #END\_HEAT#) cannot be omitted.
- Processing of each sheet of the template stops at the identifier #END\_TEMPLATE#. Removing this identifier results in a large increase in processing time for the export.
- Columns 250 – 255 are reserved for internal use.
- Positions of the identifiers of the ORDER block can be changed horizontally or vertically.
- All identifiers of the blocks ISH (Item Shipments), MCS, IRC, RN (Release Notes) and HEAT (Heat Numbers) must reside on one line.

- The identifiers corresponding to the **Pos**, **Sub**, **Is Pos**, **IS Sub**, and **Suppl** fields are required for item shipments and heat numbers (ISH and HEAT sheets).
- Data type formats of the identifier fields must correspond to the datatypes on P.70.72 (this is the case in the supplied template).
- Color coding in the supplied template in general has the following meaning (although this is not a complete representation of the application logic of P.70.72).

Color	Meaning
Gray	Fields that cannot be modified by the import and thus should not be changed.
Green	Mandatory; input is required for these fields by the import.
White	Optional; input is not required for these fields.
Blue	Fields in the order block cannot be modified. For the identifier #SPLIT#, see the information about splitting tags.

## SECTION 13

# Packages Export/Import

The Packages functionality allows the supplier to provide packing list details using an Excel template. This provides the user with a detailed view of each shipment item as well as in which package and in which quantity these can be found.

The Excel interface for packages can be used to exchange data between SmartPlant Materials and external systems using an Excel workbook for data transfer. The data can be exported in a customer-defined format (some restrictions apply) by using a template file. Templates are provided with SmartPlant Materials.

The import checks all data in the Excel workbook for compliance with the rules of SmartPlant Materials and rejects incorrect data to maintain data integrity. You cannot import data using the Excel interface that you cannot enter manually on P.70.74.

Additionally, you can import package data by using an import file created by an external system.

On the **P.70.74 Packages** screen, you can export packages with or without release notes to an Excel workbook. After editing the Excel workbook, you can import the data from this Excel workbook back into SmartPlant Materials using the **P.70.74 Packages** screen.

For more information about packages, see *Packages* in the *SmartPlant Materials MSCM User's Guide*, available from the **Printable Guides** page in the software.

## Excel Templates

The following template files are available for the package export/import:

Template	Description
PCK-701.xls	Export of existing packages without release notes
PCK-IMP-701-NEW.xls	Import of new packages without release notes
PCK-RN-708.xls	Export of packages for a release note
PCK-IMP-RN-701-NEW.xls	Import of new packages for a release note

Enter the template(s) for the export on the **A.30.05 Parameters** screen as values for the parameters ZP\_TP\_PK (for export of packages without release notes) and ZP\_TP\_PKRN (for export of packages with release notes).

The screenshot shows the 'A.30.05 Parameter' window. The 'Parameter' tab is active, displaying the following fields:

- Parameter:** ZP\_TP\_PK
- Short Desc:** Excel Package Export
- Description:** Template for Excel Package Export
- Standard:** ☒
- Mandatory:** ☐
- Lexical:** no lexical parameter
- Parameter Type:** Administration
- Data Type:** Character
- Query Type:** Static
- Table Column:**
- Command:** (Empty text area)
- Details:** (Button)

Below the parameter configuration is the 'Application Parameter Values' section, which contains a table with the following columns: Parameter Value, Default, and Comment. The table is currently empty. An 'Editor' dialog box is open over the table, showing the text: C:\DEVELOPMENT\trunk\SPMAT\SPMAT\download\PCK-701.xls. The dialog has OK, Cancel, and Search buttons.

These templates are available in the list of values on the export window of P.70.74.

## Modifying the Excel Templates for Export

The supplied templates can be modified according to the following rules:

- It is not allowed to modify the names of the INTERNAL sheet.
- The display of data is controlled by identifiers in the following format :  
#FIELD\_NAME#  
\*FIELD\_NAME\* - Using this format excludes the field from the import. There is no difference in the created export file.
- The start identifier of each data block (#PK#, #PKI# for packages without release notes, #RN#, #PCKI# for packages with release notes) cannot be omitted.
- The end identifiers of the package items data block (#END\_ISH#) cannot be omitted.
- Processing of each sheet of the template stops at the identifier #END\_TEMPLATE#. Removing this identifier results in a large increase in processing time for the export.
- Columns 250 – 255 are reserved for the definition of code lists. You can enter additional value lists for fields of the template.
- Positions of the identifiers of the #PK#/#RN# blocks can be changed horizontally or vertically.

- All identifiers of the blocks for package items must reside on one line.
- The identifiers corresponding to the Pos, Sub, IS Pos, IS Sub, and Suppl fields are required for package items to identify the correct item shipment during import.
- Data type formats of the identifier fields must correspond to the data types on P.70.74 (this is the case in the supplied templates).
- Color coding in the supplied template in general has the following meaning (although this is not a complete representation of the application logic of P.70.74).

Color	Meaning
Gray	Fields that cannot be modified by the import and thus should not be changed.
Green	Mandatory; input is required for these fields by the import.
White	Optional; input is not required for these fields.
Blue	Fields in the order block cannot be modified. For the identifier #SPLIT#, see the information about splitting tags.

## Export Package Data

You start the export operation on the **P.70.74 Packages** screen by clicking the **Export** button (available on both tabs) after navigating to the selected record.

**P.70.74 Packages**

WITHOUT RELEASE NOTES | With Release Notes

Packages

## Packages Export/Import

A window appears, showing the template defined in the project default. You can change the template using the LOV in the **Template for Export** field.

After you click the **Export** button, the information of the selected package/release note is written to an Excel file. Depending on the amount of data, this process might take a few minutes. After the export operation is complete, a window offers you the option to either open the created export file in a new browser window or to store it in a directory on your file system. An example of the Excel workbook that is created is displayed below.

Package without Release Notes									
<div>INTERGRAPH</div>									
Package									
Package Number	MMKTZU-01-001								
Package Type	CARTON

Package Items									
#PKI#									
only for Import!									

## Packages without Release Notes

- Only one package at a time can be selected for export.
- The template PCK-701.xls includes all possible fields for the export.
- If the file will be imported again, the required fields cannot be omitted from the template. For more information about the required fields, see *Import Package Data* (on page 61).

## Packages with Release Notes

- All packages and package items belonging to the selected release note are exported.
- Additionally, all item shipments of the release note not belonging to a package are exported.
- The template PCK-RN-708.xls, provided with SmartPlant Materials release 7.0.8, includes all possible fields for the export.
- If the file will be imported again, the required fields cannot be omitted from the template. For more information about the required fields, see *Import Package Data* (on page 61).

## Import Package Data

1. On the **P.70.74 Packages** screen, click the **Import** button (available on both tabs) after navigating to the selected record.

Alternatively, click the **Excel Export** button, and select the **Import** tab from the **Export/Import Options** dialog box.

**NOTE** Be sure that the **Insert** (creation of new package items) and **Update** (update of existing packages/package items) check boxes are selected.

2. Select the **Stop on Error** option.

- Click **Browse** to navigate to the file you want to import. A browser window opens.

The screenshot shows a web browser window titled "SPMAT Upload Files". The main heading is "Upload of an IMPORT file to the application server". Below this, there is a text input field with the placeholder text "Which file do you want to upload?". To the right of the input field is a "Browse..." button. Below the input field is a "Submit Query" button. At the bottom of the window, there is a note: "If you upload large files, the response may take a little while, due to the amount of transmitted data."

- Click **Browse** to navigate to the file you want to import.
- Select the file and click **Open** to continue.
- After the Upload Feedback message appears, close the window.
- Click **OK** on the **Export/Import Options** dialog box.
- When the import finishes successfully, click **OK** to acknowledge the message.

The import operation identifies the correct item shipments to create new positions or update existing positions by using the information provided in the following fields:

- Pos
- Sub
- IS Pos
- IS Sub
- Ident Code
- Tag Number
- Commodity Code
- Order Number
- Size1..5

If one or more of these fields are omitted, the information in the remaining fields must identify a unique item shipment. Otherwise, no package item is created or updated; instead, an error message is written to the log file.

## Packages without Release Notes

The import operation offers the option for either single or multi package import. Details are described in the following sections.

### Import of a File Created by Export

This import mode allows the update of an existing package. Only the information that is also updateable in SmartPlant Materials can be changed. It is important that the INTERNAL sheet of the file generated by the export is not modified; otherwise, there is the danger of errors preventing a successful import or even data corruption.

### Import of an Externally-Created File

This file must be based on a template (PCK-IMP-701-NEW.xls might be used as an example). In this template, the field information on the INTERNAL sheet must match the fields on the data sheet. Furthermore, the entry #NEW# must be available on the INTERNAL sheet in column 1 row 2. This import mode allows you to load multiple packages with one file.

### Assignment of Package Positions

The import identifies the correct item shipments to create new positions or update existing positions by using the information provided in the following fields:

- Pos
- Sub
- IS Pos
- IS Sub
- Ident Code
- Tag Number
- Commodity Code
- Order Number
- Size1..5

If one or more of these fields are omitted, the information in the remaining fields must identify a unique item shipment. Otherwise, no package item is created or updated; instead, an error message is written to the log file.

### Issued/Received Packages

If a package for which the Excel import is started is already issued or received, there are no changes to this package. Instead, the import creates a second package (always of site type 'ISSUE') that contains the modified information. The package name is that of the original package followed by a three-digit number. The software automatically selects the highest number that is not yet used for a package name. If quantity reductions compared to the data stored in SmartPlant Materials are imported, a second package is created containing the quantity differences.

## Packages with Release Notes

It is possible to import multiple packages for one release note.

### Import of a File Created by Export

Enter the information in the file created by the export and start the import. Please note that the import only works for the same release note as selected for export. It is important that the INTERNAL sheet of the file generated by the export is not modified; otherwise, there is the danger of errors preventing a successful import or even data corruption.

### Import of an Externally-Created File

This file must be created based on a template (PCK-IMP-RN-638-NEW.xls is provided as an example). In this template, the field information on the INTERNAL sheet must match the fields on the data sheet. Furthermore, the entry #NEW# must be available on the INTERNAL sheet in column 1 row 2. This import mode also allows you to load multiple packages with one file.

## Splitting of Item Shipments

The import offers the option to split tag items. To accomplish this, the identifier #SPLIT# is needed in the PKI and PCKI section (the column will from now on be called 'split column' in this document). It can appear in any column, but it is recommended to place it before the columns **Pos**, **Sub**, **IS Pos**, and **IS Sub** for clarity (as you can see in the supplied templates).

To mark a line for split, enter 'X' in the split column. Create as many new lines as you would like splits right after this line and mark each of them with 'D' in the split column. The values for the fields **Pos**, **Sub**, **IS Pos**, **IS Sub**, and **Suppl** are not required for these columns because the software will automatically assign the correct values when creating the split. Enter all required information (like tag numbers) in the split lines.

To add more splits to a specific item shipment, there are two ways:

- Export the data created by the import and then add the splits in the Excel workbook directly under the item shipment you want to split.
- Remove the split indicator from the already imported lines in the Excel workbook and enter the required number of lines directly under the item shipment you want to split and mark them with 'D'. Also, update the fields for **Pos**, **Sub**, **IS Pos**, and **IS Sub** to the values on P.70.74.

## SECTION 14

# Traffic Data Export

On the **P.80.51 Traffic Fast** screen, you can export traffic data to an Excel workbook. Before exporting traffic data, set the project default ZP\_TP\_TRFC to the entire folder path where your Excel template is stored. (Example: C:\SPMAT7\download\MOC-625.xls)

The screenshot shows the 'P.80.51 Traffic Fast' window with the following sections:

- Means of Conveyance:** Includes fields for Carrier Name (CX), Voy or Flt Num (789), ETD Date (21-MAR-2008), ATD Date (17-MAR-2008), ETA Date (19-MAR-2008), ATA Date (20-MAR-2008), Loading Point (HHI ME FCA), Unloading Point (DORTMUND), Name 1 (747), and Name 2 (CARGO). An 'Export' button is present.
- Bill of Ladings:** Includes fields for BOL Number (MM-TEST21), Invoice Number (72-850586565321), BOL Weight (20,000.000), Weight Unit (KG), BOL Volume (150.000), Volume Unit (M3), BOL Dim (10,1,15), and BOL Pieces (2). It also has 'Custom Clearance Predicted' (24-MAR-2008) and 'Custom Clearance Actual' fields, with 'Item Shipments' and 'Transportation' buttons.
- Containers:** A table with columns: Container Number, Short Desc, Description, Weight, Weight Unit, and Volu. The first row shows CT24752, 4752, Container 4752, 2,500.000, T, and an empty cell. Below the table are 'Item Shipments' and 'Transportation' buttons.

To export traffic data to an Excel workbook, click the **Export** button. A box opens where you can select a template file and start the export.

The 'Template for Export' dialog box shows a text field containing the path 'C:\DEVELOPMENT\trunk\SPMAT\SPMAT\download\MOC-625.xls'. Below the field are 'Export' and 'Cancel' buttons.

The **Template for Export** field displays the name of the template file assigned to the project default ZP\_TP\_TRFC, with the path where it is located on the application server. You can use the LOV in this field to select another template. The LOV provides the templates that are pre-defined on A.30.05 for the parameter ZP\_TP\_TRFC.

## Traffic Data Export

Click the **Export** button to start the export. All detail data belonging to the selected means of conveyance (bills of lading and item shipments) are exported to an Excel workbook. When the export operation is complete, you can choose to download the created file to a directory on your file system or to open the file.

An example file appears below.

Traffic Fast

## SECTION 15

# MRR Import

On the **C.20.03 Prepare MRR by Direct Receive** screen, you can import MRRs (Material Receiving Reports) for direct receiving from an Excel workbook.

MRR Number	Rev	MRR Create Date	Posted Date	Matl Recv Date	Recv Type	MTR/Voucher Number
	0				Others	

To use this functionality, the Excel template `Excel_import_direct_mrr_template.xls` must be available on the application server in the download directory.

**NOTE** The **Import** button is only enabled if the MRR has revision 0 and the MRR is not posted.

If you click the **Import** button, a new window opens.

File Name: MRRID34831.xls

Directory: C:\\DEVELOPMENT\\trunk\\SPMAT\\SPMAT\\download\\

Import excel file

The name of the Excel file is automatically generated and displayed in the **File Name** field.

For more information, see *Direct Receiving* in the *SmartPlant Materials Site User's Guide*, available from the **Printable Guides** page in the software.

## SECTION 16

# MTR Export/Import

On the **C.20.15 Material Transfer** screen, you can export MTRs (Material Transfer Reports) to an Excel workbook and re-import MTRs from an Excel workbook. To use this export/import feature, you must set the DBA settings MTR\_DOWNLOAD\_URL and MTR\_UPLOAD\_DEST.

## Export MTRs

Click **Export** to export the selected material transfer report into an Excel workbook.

**C.20.15 Material Transfer**

**Material Transfer Report**

MTR Number: RW000171 | MTR Create Date: 22-AUG-2012 | Posted Date: 22-AUG-2012 | Transfer Date: 22-AUG-2012 | MTR Type: Regular | MTR Status: NULL | Reservation Co:

Buttons: Populate Reservation, Post, Export, Group Reservation

Plate Number: | X-dim: | Y-dim: | Heat Number: | Populate Plate Number

**Inventory Transfers**

Ident Code	Commodity Code	Tag Number	Warehouse	Location	Recv Status	Size 1	Size 2	Size 3
I47607210	PP1A001M100000	---	RTI	RTI	RW	.125	S-15	0
I47607211	PP1A001M100000	---	RTI	RTI	RW	.125	S-35	0

**NOTE** Only MTRs of type 'Regular' can be exported.

A box opens from which you can start the MTR export.

**C.20.15 Material Transfer: Window 4**

Import / Export

File: MTR-120917.xls | Path: C:\DEVELOPMENT\trunk\SPMAT\SPMAT\dc | Default Dir

Buttons: Upload, View Import Log, Start

Options: ☒ Export Material, ☐ Export for Nested System, ☐ Import Material ☒ only complete

To export an MTR, select **Export Material** and click **Start**. After downloading the file, you can open or save the file. An example of this file appears below.

**SPMat Material Transfer Ticket**

MTR Number	MTR Create Date	Posted Date	Transfer Date	MTR Type	MTR Status	Reservation Code	Run Number	Split Result	Warehouse	Short Desc	Description	Transferred By
RW000171	22.08.2012	22.08.2012	22.08.2012	Regular					RTI			

Ident Code	Commodity Code	Tag Number	Warehouse	Location	Recv Status	Size 1	Size 2	Size 3	Size 4	Heat Number	Unit	New Warehouse
I47607210	PP1A001M100000	---	RTI	RTI	RW	.125	S-15	0	0		EA	OI_RTI
I47607211	PP1A001M100000	---	RTI	RTI	RW	.125	S-35	0	0		EA	OI_RTI

### Re-Import MTRs

To re-import a modified Excel workbook, select the **Import Material** option.

Select the **only complete** check box if only complete MTRs will be imported. If this check box is selected, any line rejected due to an error will cause the entire file to be rejected. If this check box is not selected, only incorrect lines are rejected.

The MTR can only be re-loaded if it is not posted and if the MTR type is 'Regular.' An Excel workbook must contain no more than one MTR. The import job creates a log file that shows the Excel line number for rejected, updated, or inserted lines and in the case of rejection, the reason why the line was rejected.

If you have selected the **Import Material** option, click the **Upload** button to upload the Excel workbook to the application server. Then click **Start** to launch the MTR import.

#### Restrictions for updating or inserting records in Excel

Inserting, deleting, or renaming of columns in the Excel workbook leads to a complete rejection of the sheet and not just a single line.

For lines with an internal MTR line item reference (value in ITR\_ID column), an update is allowed only for the following fields:

- New Warehouse
- New Location
- New Status
- Move Qty
- Comment

For lines with an internal MTR line item reference (value in ITR\_ID column), an update of the following fields leads to a rejection:

- Ident Code
- Commodity Code
- Tag Number
- Warehouse
- Location
- Recv Status
- Sizes 1 to 4
- Heat Number
- Unit
- Ident Deviation

The update of the following fields is ignored:

- On Hand Qty
- Ident Short Description

For lines with an internal MTR header reference (value in MTR\_ID column), an update is allowed only for the following fields:

- Short Desc
- Description
- Transferred By
- ETA Date
- Shipper Reference

For lines with an internal MTR header reference (value in MTR\_ID column), an update of the following fields is ignored:

- MTR Number
- MTR Create Date
- Posted Date
- Transfer Date
- MTR Type
- MTR Status
- Reservation Code
- Run Number
- Split Result
- Warehouse

New lines can be inserted. These lines don't have an internal MTR line item reference (value in ITR\_ID column). The insert of such a record is rejected if:

- the line cannot be found in the inventory,
- the line is found multiple times in the inventory,
- or not enough onhand quantity is available.

Lines are rejected if no new warehouse, new location, and new status are entered, or if the entered new warehouse, new location, or new status does not exist.

For more information about MTRs, see *Material Transfer* in the *SmartPlant Materials Site User's Guide*, available from the **Printable Guides** page in the software.

## SECTION 17

# PCO Export/Import

On the **SM.40.01 Potential Change Orders** screen, you can export PCOs (Potential Change Orders) to an Excel workbook and import PCOs from an Excel workbook.

## Export Potential Change Orders

Before exporting PCOs, set the project default ZP\_TP\_PCO to the entire folder path where your Excel template is stored. (Example: C:\SPMAT7\download\PCO-TPL-636.xls)

In addition, store the template on the application server in the folder assigned to ZP\_TP\_PCO. The template can be customized; for example, you can reduce the number of fields.

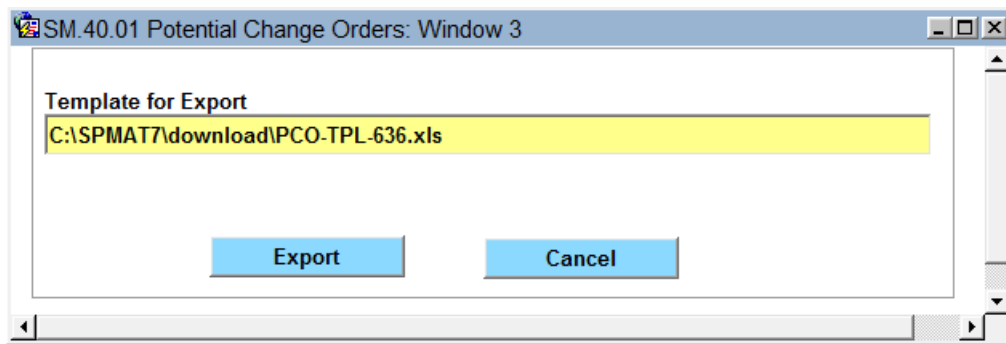

PCO Number	COR Details	Short Desc	Description
RS-PCO-1011	<input checked="" type="checkbox"/>	PCO 1011	Potential Change Order No. 1011
RS-PCO-1020	<input type="checkbox"/>	PCO 1020	Potential Change Order No. 1020
RS-PCO-1038	<input type="checkbox"/>	PCO 1038	Potential Change Order No. 1038
RS-PCO-2000	<input type="checkbox"/>	PCO 2000	PCO 2000 imported via Excel
RS-PCO-3000	<input type="checkbox"/>	PCO 3000	PCO 3000 imported via Excel
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		
	<input type="checkbox"/>		

Create PCO COR Details Export Import

Enter a query to display the PCOs to be exported. You can export:

- All PCOs
- A filtered list of PCOs
- One PCO

Click **Export**. A window appears, showing the template defined in the project default.

Click **Export** again. The records on SM.40.01 are exported.

When the software finishes the process, Excel opens. You can open or save the file.

## Import Potential Change Orders

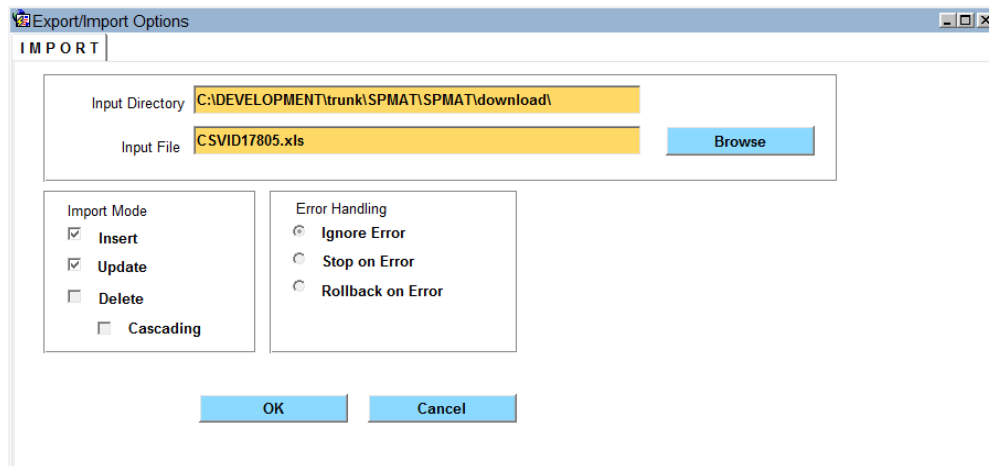

Before you import, query all records on **SM.40.01 Potential Change Orders**.

The file to be imported must have the same format as the export template. The mandatory (green) fields must be filled. The optional (gray) fields do not have to be filled with any data.

[illegible]

If the import file contains data that is not yet defined in SmartPlant Materials (such as PCO status, SC category, or reason code), the software displays a message, allowing you to specify whether you want to continue or not.

On **SM.40.01 Potential Change Orders**, click **Import**. On the **Upload** window, browse to select an Excel workbook, and then click **Submit Query** to send the request. Click **OK** on the **Import Options** window.

The software imports the data. When the operation is complete, you can check the log file for messages.

- PCOs are imported with or without assigned CORs.
- PCOs that already exist in SmartPlant Materials are updated with new data.
- PCOs imported without CORs are updated in SmartPlant Materials if they already exist, without deleting or updating the assigned CORs.

For more information about PCOs, see *Potential change orders* in the *SmartPlant Materials Subcontractor Management System (SMS)* documentation, available from the **Printable Guides** page in the software.

## SECTION 20

# Glossary Export/Import

On the **A.30.12 Glossaries** screen, you can export/import glossaries to/from an Excel workbook.

The screenshot shows the 'A.30.12 Glossaries' window. At the top, there is a 'Glossaries' section with a dropdown menu showing 'P60'. Below this are fields for 'Short Desc' and 'Description', and buttons for 'for screen ...', 'Export', and 'Import'.

The main section is titled 'Translations' and contains a table with four columns: 'Prompt', 'Hint Text', 'Translated Prompt', and 'Translated Hint Text'. The table lists several glossary items with their corresponding translated prompts and hint texts.

Prompt	Hint Text	Translated Prompt	Translated Hint Text
Account Code		Planned Req #5	
	Tooltip		Translated Tooltip
Client Agreement	The number of the client's associated agreement	Planned Req #4	
	Tooltip		Translated Tooltip
Client Req Number	Name (code, number) of the client's associated requisition	Planned Req #2	
	Tooltip		Translated Tooltip
Comment	Comment	Planned Req #3	
	Tooltip		Translated Tooltip
Link to Req		Scope	
	Tooltip		Translated Tooltip
ROS Date		Planned Req #1	
	Tooltip		Translated Tooltip

## Glossary Export/Import

To export a glossary, click **Export**. A box displays the folder and the file name for the export.

Directory  
C:\DEVELOPMENT\trunk\SPMAT\SPMAT\download\

File Name  
glossary\_P60.xls

☐ All prompts (without translations)

☐ All prompts (with translations)

☒ Current glossary

☐ All prompts missing in current glossary

Export Cancel

You can choose which data to export. The available options are:

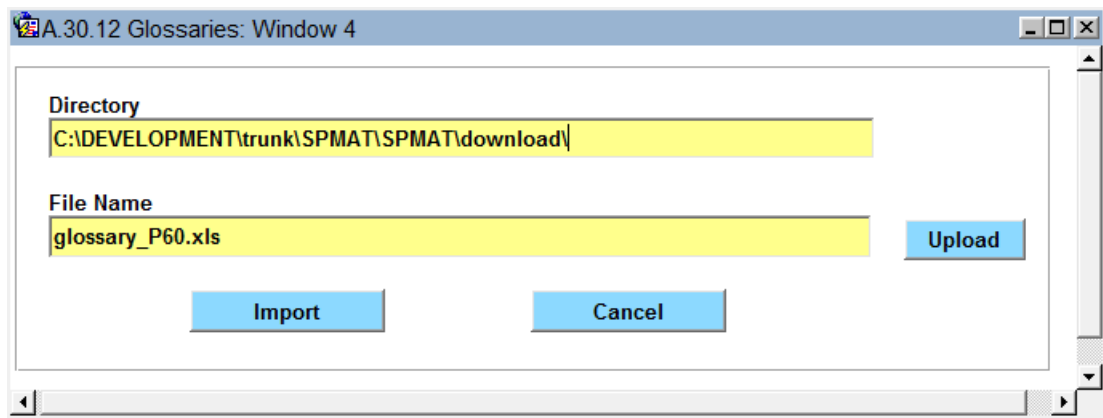

- All prompts (without translation) - Exports all prompts available in the database.
- All prompts (without translation) - Exports all prompts available in the database with their translations.
- Current glossary - Exports the prompts of the selected glossary, including their translations.
- All prompts missing in current glossary - Exports all prompts available in the database that are not assigned to the selected glossary.

Click **Export** to launch the export job.

The picture below shows an example of an exported glossary.
