7100 24 hour ABPM

The Welch Allyn ABPM 7100 is an easy-to-use 24-hour ambulatory blood pressure monitor that offers maximum patient comfort and compliance.

- Highest clinical validation – BHS A/A
- Intelligent inflation provides excellent patient comfort and improves compliance
- Fully flexible program options for various measurement periods and inflation
- Includes Welch Allyn CardioPerfect® workstation software – the professional's choice
- Easily create, print, and customise detailed reports to meet your needs
- Data can be transferred to all major patient record systems inc. EMIS, SystemOne and Vision
- Lightweight, compact and quiet for further patient comfort and compliance
- 100% latex-free and PVC cuffs reduce the risk of allergic reactions
- Can be integrated with other CardioPerfect™ devices such as ECG and spirometry to streamline diagnostics
- Supplied with 2 cuffs: adult and large adult
- On-site staff training included

ABPM 7100CBP

- ABPM 7100 recorder with central BP analysis, and with hypertension management software (not CardioPerfect)

ABPM 7100PWA

- ABPM 7100 recorder with central BP analysis, pulse wave analysis, and with hypertension management software (not CardioPerfect)

Upgradable

Future-proof your investments with the upgradable 7100 ABPM: add new functionality including central blood pressure and pulse wave analysis to identify arterial stiffness.

Studies show that measuring aortic pulse wave velocity and central blood pressure provides greater indication of potential heart attacks and strokes than the blood pressure value taken on the upper arm alone.

For a demonstration or more information please contact us.

- ✓ BHS A/A validated
- ✓ 2 year guarantee

Omron M24/7 BP5 ambulatory blood pressure monitor

DEMO AVAILABLE

2 YEARS GUARANTEE

OMRON

This fully automatic ambulatory blood pressure monitor offers doctors the opportunity to complement their current treatment therapy for hypertensive patients by monitoring them away from the surgery for up to 48 hours.

This is essential for patients who present with white-coat syndrome where the readings are high when in the presence of doctors at the surgery, also for patients who may be experiencing a surge of High blood pressure early in the morning or at night which may not be detected with conventional measurement at home.

- The device comes with two latex-free cuffs enabling to measure medium to large arms comfortably
- Windows based software is included for easy set up and analysis of results
- Clinically validated by the British Hypertension Society

SPH343	Omron M24/7 BP5 ABPM	£1500.00

sphygmomanometers

907 automatic BP monitor

Automatic and auscultatory use combined in one unit

- Auscultation mode – this allows BP to be verified by clinician, reading digital figures from LCD display while cuff deflates automatically
- Fully automatic blood pressure monitor ideal for the hospital bedside or consultation room
- Quick-charge battery pack will give 300 measurements from a single charge
- Extra-large LCD display of SBP, DBP and HR
- Silent operation and 'hide' feature ensures pleasant measurement minimising white-coat hypertension effect
- Arrhythmia indication
- Comes with mains adapter and 1 medium cuff
- Cuffs available – small, medium and large
- 'IntelliSense' measuring technology means that the 907 automatically inflates only as far as needed thus avoiding the discomfort caused by over inflation of manual devices
- Average mode – can be set for automatic measurement readings and then display individual and average BP and HR values
- Mobile stand/mounting kit
- Ideal for patients with severe arrhythmia

M2 upper arm BP monitor

Comfortable, quick and accurate blood pressure monitoring is now even easier with this fully automatic digital upper arm monitor. It gives early warning of potential health issues with an irregular heartbeat detector.

With the OMRON M2, protection against hypertension is in your hands. While the easy to wrap cuff fits most adult arms (22 – 32cm circumference), the Cuff Wrapping Guide ensures correct fitting, and the new larger display makes the results clear and easy to read.

- Irregular heartbeat detection
- Cuff wrapping guide
- Blood pressure level indicator
- Stores 30 readings

Irregular heartbeat detection

- A symbol appears if an irregular heartbeat has been detected whilst a measurement has been taken
- The M2 also features a blood pressure level indicator which will show you if your blood pressure is outside the normal range

3 YEARS GUARANTEE

OMRON

SPH590

£44.75

Omron M6 AC upper arm BP monitor

The Omron M6 AC is equipped with a range of useful features. With the Easy BP Level Indicator you can see at a glance if blood pressure is normal or high. The Morning Hypertension tracking function and Irregular Heartbeat Detector provide additional insight into a patient's vascular health.

The M6 AC makes it extremely easy to take an accurate reading. The 22 to 42cm cuff fits most adult arm sizes, and the Cuff Wrapping Indicator gives a clear confirmation of whether the cuff has been wrapped correctly. If you have been advised by your doctor to record the average of three readings, use our Advanced Averaging Function to do this for you. To enable you to keep track of your results the model is equipped to enable 2 users to store up to 100 readings each.

An AC adapter is included as standard on the M6 AC model.

- Irregular heartbeat detector
- Morning hypertension indicator
- High blood pressure indicator
- Wide range cuff 22 – 42cm
- Cuff wrapping guide
- 2 user memory
- Stores 100 readings per user

SPH59201

£74.96

Omron M6 Comfort

The M6 Comfort is equipped with a range of useful health indicators. With the Easy BP Level Indicator, which features an LED light, you can see at a glance if your blood pressure is normal or high. The Morning Hypertension Tracking Function and Irregular Heartbeat Detector provide additional insight into your vascular health. LED Cuff Wrap Guide - A red Cuff Wrap Guide light shows if cuff is wrapped incorrectly (too loose or too tight) and a green light shows if cuff is wrapped correctly.

The technology – Intelli Wrap Cuff™

Eliminate inaccurate readings associated with incorrect positioning with Omron's Intelli Wrap Cuff technology. Intelli Wrap features a longer inner tube that wraps all the way round the arm, rather than partially, so no matter where you position it even at 180 degrees from the artery – you can feel confident about the accuracy of your reading.

- Irregular heartbeat detection
- Average 3 readings
- Intelli Wrap Cuff technology
- Easy BP level indicator
- Movement sensor
- Two user memory
- Morning hypertension tracker
- Blood pressure level indicator
- Clinically validated

Omron HBP-1100 professional upper arm BP monitor

The HBP-1100 is specially designed for use in professional settings and is clinically proven to produce fast and reliable results all day, every day. Depending on preference or situation fully automatic oscillometric measurement or manual auscultation mode (using a stethoscope, such as patients with (AF) atrial fibrillation) can be chosen.

The zero indicator shows that the device is reset to zero pressure level and is ready for the next measurement, ensuring accurate results. Equipped with a highly durable pump, robust sensor and professional grade metal cuff connector, the device is durable enough to survive daily intensive use in hospitals and medical facilities.

Accuracy of all blood pressure monitors and patient comfort is dependent on using the correct cuff size for the patient. That's why the monitor is compatible with a series of specially designed wipe-clean cuffs ranging from XS (12 – 18cm) to XL (42 – 50cm).

RS8 wrist BP monitor

Our thinnest monitor ever

The attractive, compact design of the RS8 doesn't compromise on performance. It packs in more features than any other wrist monitor and even boasts NFC connectivity so you can wirelessly transfer your readings to your laptop, PC or android smartphone in seconds.

The new RS8 model is Omron's most advanced wrist monitor. Totally silent, they are also the smallest monitors we've ever manufactured. And thanks to their fan cuff design, they can be adjusted to fit even small wrists. What's more, the RS8 can connect to a PC, laptop via NFC (near field communication) to record and analyse results.

Features

- Blood pressure level indicator
- Irregular heart beat detection
- Advanced positioning sensor
- Body movement sensor
- Intellisense technology
- Silent operation
- NFC connectivity
- Graphing function
- Cuff wrapping guide
- Fits 13.5 – 21.5cm wrists
- Average of 3 readings
- Hard case included
- Batteries included (1 set)
- Can be used with new Bi Link software

ProBP 2400 digital BP device

The Welch Allyn ProBP 2400 is a clinically validated, yet affordable, professional device that you can trust to accurately measure your patients' blood pressures.

- Validated and recommended for use in pregnancy and pre-eclampsia
- BHS validated
- Irregular pulse detection
- 800 readings on full charge
- Currently validated on patients 12-years and older
- Large backlit LCD display
- Folding handle for easy portability
- Mobile stand and wall mount offered as optional accessories
- Supplied with external power supply/recharger
- Supplied with two BP cuffs; adult & large adult

NEW

2 YEARS GUARANTEE

Single reading mode

- Provides a single BP reading

Three reading average mode

- Gives more accurate representation of baseline BP by reducing 'white-coat' effect

Manual mode

- Turns the ProBP 2400 into a digital manometer allowing the use of a stethoscope to determine BP

WatchBP Office Central

The WatchBP Office Central can reliably determine the central blood pressure value by means of a sophisticated technique.

5
YEARS
GUARANTEE

NEW

microlife
WatchBP®

What is central blood pressure?

Central blood pressure is the pressure in the aorta, the largest artery that originates from the left ventricular of the heart and from where oxygen is distributed to all parts of the body through the systemic circulation. Central blood pressure is expected to better correlate with cardiovascular risk than peripheral (upper arm) blood pressure because the aorta exerts the blood pressure on the heart and brain, the most vital organs of the body.

How does it work?

The WatchBP Office Central is equipped with a pressure sensor that can record waveforms using a method called pulse volume plethysmography (PVP). Initially, a regular (peripheral) arm blood pressure measurement is performed after which the cuff is deflated as usual. However, when the cuff reaches a pressure of 60mmHg the device stops deflating and a cuff pressure of 60mmHg is maintained for approximately 30 seconds. During these 30 seconds, 20 to 30 waveforms are recorded and analyzed to provide the central blood pressure values.

Accuracy of the WatchBP Office Central

The reliability of central blood pressure measurement with an automated oscillometric device can only be determined reliably against intra-arterial blood pressure measurement (thus not against another device). The WatchBP Office Central has been validated against simultaneous recorded intra-arterial blood pressure measurement in 85 subjects and showed that it can accurately measure central systolic, diastolic and pulse pressure.

Other functions

Similar to the WatchBP Office ABI, the WatchBP Office Central can assess the ankle brachial index, allows performing simultaneous double arm measurements and screening for atrial fibrillation.

The AFIB algorithm of Microlife has been clinically investigated by several prominent clinical investigators and showed that the device detects patients with AF at 97–100% certainty and is recommended by NICE www.nice.org.uk/guidance/mtg13

- Validated for use in pregnancy – pre-eclampsia
- Validated for use in end stage renal disease / severe diabetes

How does a connected health solution work?

Blood pressure measurements and AF screening are performed

Results are transferred to smartphone, PC or Hub

From device the data is transmitted to the cloud

The healthcare professional receives the data

The WatchBP Home A is a WatchBP home device equipped with an atrial fibrillation detection system. When you are diagnosed with hypertensive and/or having atrial fibrillation the WatchBP Home A(fib) is the best tool to optimize your treatment.

microlife
WatchBP®

When you have atrial fibrillation a physician can decide to prescribe you anti-arrhythmic drugs. These drugs should stop the atrial fibrillation. With the WatchBP home A you can easily verify the working of these drugs, while at the same time monitoring your blood pressure.

Product features

- Screening for AFIB with high accuracy (at 97%~100% sensitivity and 89% specificity) while measuring blood pressure
- Easy and convenient to use
- Embedded ESH/AHA measurement guidelines lead to accurate home measurement data physicians can trust
- Automated data tabulation displays averages for morning, evening and overall measurement
- Validated for use in end stage renal disease

- Detects atrial fibrillation (AF)
- Validated for use in pregnancy pre eclampsia
- Supplied with a medium (22 – 32cm) size cuff

SPH486	Home A BP monitor	£100.00
SPH496	Home A BP monitor with bluetooth	£130.00

SPH48802	Medium cuff, 22 – 32cm	£20.00
SPH48803	Large cuff, 32 – 42cm	£20.00
SPH48804	X-large cuff, 32 – 52cm	£25.00
SPH491	Mains adaptor	£20.00

WatchBP Home S

WatchBP Home S makes screening for atrial fibrillation (AFIB) and monitoring daily blood pressure both simple and convenient.

Screening for Atrial fibrillation (AFIB) at home is recommended by leading medical societies. Atrial fibrillation (AFIB) is an important cause of stroke and death. Therefore, subjects can largely benefit from early detection of AFIB. The WatchBP Home S can detect risk factors as high blood pressure and the presence of AFIB with high accuracy and reminds patients to contact their physician with an animated alert

- The AFIB algorithm of Microlife has been clinically investigated by several prominent clinical investigators and showed that the device detects patients with AFIB at 97–100% certainty
- Lightweight and compact for convenient storage

Going-to-doctor symbol

WatchBP®

SPH484

£70.00

Microlife WatchBP O3 and WatchBP O3 AFIB

Microlife WatchBP O3 (out-of-office): highly affordable ambulatory (24-hour) blood pressure monitor with implemented self-measurement schedule.

Out-of-office measurements are highly recommended as an adjunct to office measurements by almost all hypertension organisations. The WatchBP O3 removes many obstacles generally associated with out-of-office measurements.

In addition to providing a highly affordable ambulatory blood pressure measurement device (ABPM), the WatchBP O3 also includes an embedded 7-day home measurement mode that strictly follows ESH and AHA measurement guidelines. As such, the WatchBP O3 serves as a total out-of-office blood pressure measurement device, validated and recommended for clinical, home and 24-h blood pressure monitoring (<http://www.dableducational.org>).

The WatchBP O3 has sophisticated software free of charge.

- 24-hour ABPM mode: fully programmable 24-hour blood pressure measurement
- 7-day SBPM mode: for collecting reliable self-measurement data
- Lightweight and compact: for improved patient comfort
- PC connectivity: transmit BP measurement data to any PC via USB connectivity

microlife[®]
WatchBP[®]

The WatchBP office ABI is a professional monitor with three modes:

Screen mode

In 'screen-mode' the device can perform simultaneous double-arm blood pressure (BP) measurements. Double-arm measurements are recommended by several guidelines to be performed at each first visit. This is because significant inter-arm differences (IAD) in BP may indicate the presence of congenital heart disease, peripheral vascular disease, unilateral neurological, musculoskeletal abnormalities, or aortic dissection.

ABI mode

After the 'screen-mode' measurements the arm with the highest BP value is known and the ankle brachial index (ABI) can be determined. The ankle arm (brachial) measurement is performed simultaneously and is validated against Doppler for accuracy with positive results. In addition, it reduces the time as compared to Doppler so that the left and right ABI can be determined in 5 to 6 minutes. In practice this means that the whole screening for three important cardiovascular risk factors hypertension, PAD and AF can be performed in less than 15 minutes.

Routine mode

The device can also be used as a regular BP monitor using 'routine mode'. The device automatically performs three subsequent measurements in a row (or less, when preferred) on one arm while screening for AF at the same time. At the end both the average and separate BP values are provided.

--------	--	--------

Click300 control valve

The Click300 is an innovative and patented blood pressure cuff deflation valve which enables the user to set a rate of cuff deflation without continual adjustment as the cuff pressure falls during the blood pressure measurement.

ACCOSON

established 1859

The valve is controlled by a simple finger wheel, with an intuitive click feature. As the wheel is rotated each click adjusts the deflation rate, and that rate is maintained automatically by the inner mechanism of the valve. This avoids the continuous adjustment required by conventional air release valves as the cuff pressure falls. The deflation rate may be changed at any time, typically after the point of systolic pressure and before the point of diastolic pressure, to avoid prolonged inflation of the cuff. Any new rate selected will be maintained by the Click300 until readjustment. This makes it easy to apply the British Hypertension Society recommended rate of cuff deflation of 2 to 3mmHg/sec, for a manual blood pressure measurement (www.bhs.org).

- Maintains rate of cuff deflation without continuous adjustment
- Can be used on any manual device with a double tube cuff
- Supplied with latex-free inflation bulb and tube connector
- Suitable for any size or style of blood pressure cuff
- Easy to use and simplifies the manual technique

SPH823		£10.00

Drop resistant

How DuraShock technology works

By creating a gear-free design, the DuraShock has fewer moving parts to provide a gauge which is shock resistant.

The DuraShock has been tested and validated to withstand a drop of 760mm onto a hard surface and still remain accurate. DuraShock is the only aneroid gauge which meets the AAMI shock resistant specification

BEST SELLER

Cuff size affects accuracy

Connect Welch Allyn Durashock gauges to any size cuff, using the unique Flexiport connector
See page 396

DS54 range

- 5 year warranty on the gauge
- Shock resistant movement
- Thumbscrew air release valve
- One tube friction fit
- Clinically validated to AAMI standards

Changing to FlexiPort is as easy as "1, 2, 3"

Step 1 How many tubes do you have on your BP Devices?

Step 2

Single tube connector

Double tube connector

Remove connector at distal end of tubing and attach Flexiport connector

Step 3

Order the tubeless BP cuffs that you need

Cuff size affects accuracy

Use the wide range of Welch Allyn cuffs on any make of blood pressure device

- How many times do you find the right sized cuff but with the wrong connector?
- How many times do you find yourself having to use a BP cuff that isn't the right size for the patient?
- Ever wonder what effect the cuff size has on accuracy?*(see answer below)

Benefits of changing to Welch Allyn Flexiport BP cuffs

- Cuffs can be purchased without tubes meaning that stock holding is greatly reduced
- Change to a larger or smaller size cuff easily and quickly
- Colour coded cuffs make size selection easy
- Latex-free material minimises risk of allergic reactions
- 3 year guarantee

*Many papers cite a difference of up to 30mmhg with an incorrectly sized cuff

seca | directprint

The new approach for weight related patient education.

Wireless measuring station
seca 285

Wireless data transmission
into the directprint software

seca directprint

Example for a seca directprint
for an **Obese I Patient**

Patient empowerment starts now – with you and the seca directprint.

Just imagine – every time you weigh your patient an individual patient education printout is generated – without even pushing a button. Now patients can review their printout while they wait in the exam room.

- Graphs with the patient's weight, height and BMI
- Tables with solutions for improving physical activity
- Information about general health and nutrition
- Differentiates between adults and children
- Easy integration into the daily workflow

**Software + seca 456 USB supplied
free of charge with seca 285**
