Spiral Pipe

All pipe is fabricated from hot-dipped G90 galvanized steel in gauges that meet or exceed SMACNA standards for spiral ducts. The following chart illustrates approximate weights for spiral pipe. Areas in grey represent fabrication minimum gauges.

Connection Types

All fittings are made standard as male size (1/8" smaller) for slip fit into standard spiral ducts except for female coupling, which is made female size equivalent to standard spiral ducts. Fittings come standard unsealed, with sealing available on request. Fittings are fabricated from hot-dipped G90 galvanized steel that meets or exceeds SMACNA standards. Elbows, unless otherwise specified, are fabricated with centerline radius equal to 1-1/2 times the duct diameter. 90° and 45° elbows 5" diameter and smaller are of diestamped construction. 90° elbows 6" diameter and larger are of 5-piece segmented construction. 45° elbows 6" diameter and larger are of 3-piece segmented construction. Elbow fittings are fabricated with segmented standing seam construction for maximum rigidity, durability, and air-tightness. Fittings are standard fabricated (but not limited to) the following chart:
