Springer is proud to offer the largest, single collection of STM books in the world

eBooks from Springer are an unparalleled resource for scientific research. Springer's eBook collection delivers complete access to the largest collection of scientific, technical and medical publications available today, including monographs, textbooks, handbooks, atlases, reference works, book series, archives and more.

The Springer eBook collection comprises more than 140,000 titles and features research from the world's foremost scholars. And the collection continues to grow as more than 8,000 newly released STM books, book series volumes and reference works are added every year.

Integrated and Simplified

Springer eBooks are available on SpringerLink, an integrated platform of more than 8 million documents spanning the universe of scientific research. Content on SpringerLink is easily discovered and accessed; all Springer text is indexed by Google and other major search engines and fully integrated with all major link resolvers, including Summon and SFX. And because Springer content is accessible through SpringerLink, all eBooks are cross-searchable with other Springer resources including journals, reference works and protocols.

No DRM Limitations

Springer eBooks do not include any Digital Rights Management (DRM), which means greater flexibility and usability for library patrons. With no DRM limitations, patrons can easily access their content anytime, anywhere. And with the SpringerLink's web responsive design, users can access content from their mobile device through an interface optimized for locating and reading text on smaller screens.

Springer eBooks are available under a wide range of business models through carefully selected partners. Visit springer.com/ebooks for more information on availability and sales.

Simultaneously, libraries are under pressure to defend budgets as institutions look to reduce costs. In this environment, the librarians' ability to rapidly sift through vast pools of information to make smart choices on relevant content for their patrons is an ever more valuable service.
