

During the 2020 Baltusrol restoration, the PrecisionAire HVAC System was installed on all 19 greens in preparation for the 2023 Women's PGA Championship and the 2029 PGA Championship.

The 2023 Tournament will mark the first time that the women's event is played at Baltusrol, while the men's edition is returning to the course for the third time.

**Ambient Pressure/Vacuum
Vaulted System**

PrecisionAire

The Merion Golf Club Restoration

Vaulted PrecisionAire HVAC Pressure/Vacuum Sub-Surface System Installation

Precision Turf Fan

“Subsurface aeration is a widely used agronomic program for USGA greens. Having the ability to run vacuum and pressure aids in moisture removal and gas exchange. With the PA technology, we can perform those tasks along with heating / cooling the air going into the rootzone. This allows us to manipulate the soil temperatures and push air into the rootzone regardless of the ambient air temperature. Having the PrecisionAire HVAC Pressure/Vacuum Sub-Surface System is a powerful tool to aid in growing Creeping bentgrass greens in the transition zone.”

Paul B. Latshaw, MSM, CGCS
Director of Golf Course Operations, Merion Golf Club, PA

SINCE 1979

Muirfield Village Golf Club

Dublin, OH

PrecisionAire above ground HVAC system is being installed at Muirfield Village Golf Club this Spring to help prepare for The 2021 Memorial Tournament

[Click Here to View Video](#)

Bloomfield Hills, MI

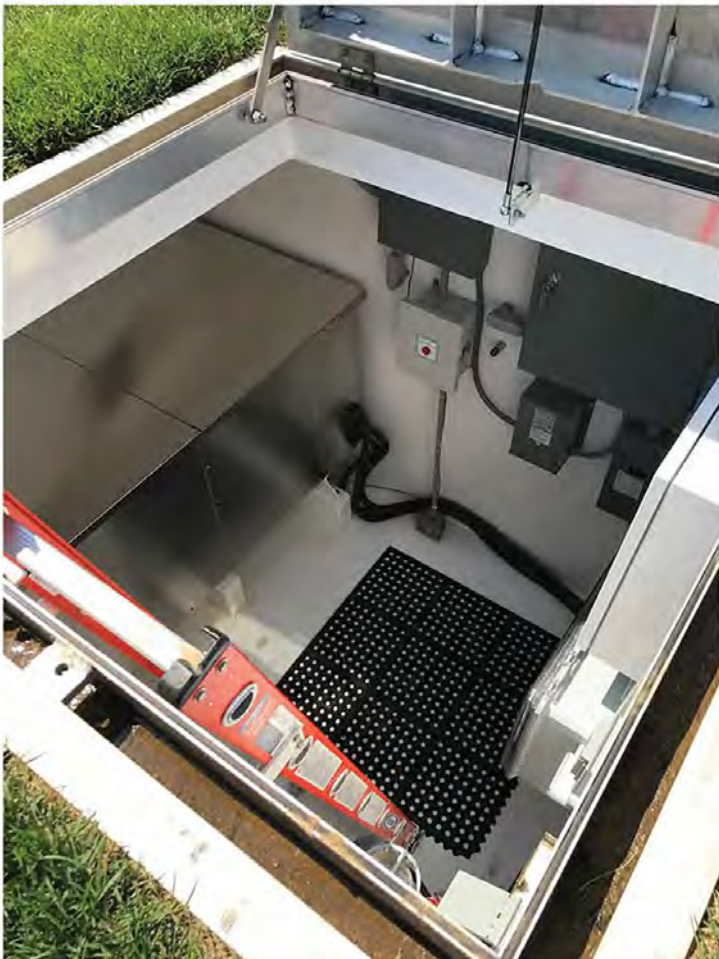

Oakland Hills Country Club, during their 2020 renovation, installed The PrecisionAire Vaulted HVAC System for day to day member play, but also for future major championships.

Oakland Hills has hosted eleven professional major championships - including six U.S. Opens, four PGA Championships, the 2004 Ryder Cup and the 1922 Western Open, along with the 2002 and 2016 U.S. Amateur.

Vaquero

Westlake, TX

The Vaquero Club in Westlake, Texas has PrecisionAire HVAC System on nine greens and will be installing a PrecisionAire Hydronics Heating/Cooling unit on test green in February for the upcoming 2022 renovation.

Matt Weitz, the Director of Grounds, said that he is excited about the possibilities that The Vaquero would be the 1st in the USA to have both to heat, cool and vacuum using forced air and the ability to heat and cool using Hydronics.

Wee Burn Country Club

Darien, CT

The PrecisionAire vaulted and above ground HVAC system was installed on all greens.

(Wee Burn has a combination of above and below ground units.)

Installed the PrecisionAire Hydronics Heating/Cooling System during their recent renovation to help prepare for the 2021 KitchenAid Sr. PGA Championship and the 2030 PGA Championship.

Bel-Air Country Club #5

©Evan Schiller

"In Southern California we are open all year around with our goal of meeting the memberships expectations of perfect putting surfaces 365. PrecisionAire HVAC units allow me to keep our growing medium temperatures exactly where I need them to be. This tool allows me to stretch the window of optimum temps longer than mother nature allows. We heat the greens November through March and cool them July through September. You can't control the weather, but with PrecisionAire units I'm that much closer to a fair fight. We are committed to adding more units annually throughout the property."

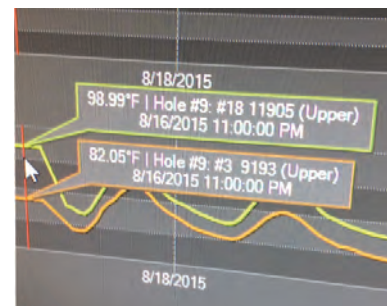

Justin DePippo, Bel-Air County Club, CA

July 26, 2018

"Growing bent grass in Texas is no easy task as we often experience daytime highs over 100° and nighttime lows above 80 for weeks on end. PrecisionAire allows us to blow air conditioning into the greens profile 24/7 during these stressful times through the subsurface drainage. The plant benefits as a result of additional oxygen combined with cooling the soil profile and gave us the competitive edge we were seeking. I have seen as dramatic as 18° cooler soil temperatures at a 2" depth and as a result we see less stress on the turf and less water being applied to keep the plant performing to our expectations. Our master plan includes a PrecisionAire on all the greens at Vaquero."

Matt Weitz, Vaquero Club, TX

AIR CONDITIONING & HEATING SYSTEM FOR SUB-SURFACE AERATION AND MOISTURE REMOVAL

The PrecisionAir™ is a self-contained pressure system for sub-surface air movement, which moves temperature controlled air into your sub-surface drainage system of a USGA green. It produces cooled or heated air, which permeates through the root zone. This provides control over the growing conditions of bentgrass greens.

PrecisionAir™ Benefits

This sub-surface aeration system is a great benefit because it provides oxygen to the root zone, which helps keep the turf grass healthier. It allows you to manage moisture & soil temperature levels so that turfgrass can be grown even in extreme climate conditions.

Stationary, Portable & Vaulted Units Available.

"The Ultimate Subsurface Aeration System"

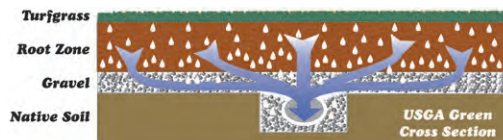

– Patented –

THE ULTIMATE SUBSURFACE AERATION SYSTEM

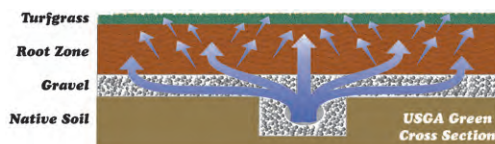

How It Works

MOISTURE REMOVAL

The vacuum port of the PrecisionAire is connected to the drainage system. This creates a vacuum in the root zone which allows excess moisture to be removed.

By controlling the moisture in the soil, PrecisionAire helps prevent the occurrence of surface algae, disease and root damage.

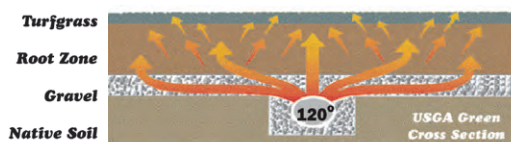

AERATION

Gases such as carbon dioxide and methane can gradually buildup in the root zone and cause poor growing conditions.

By moving air through the root zone harmful gases are removed from the entire green.

PrecisionAire Temperature Control Capabilities

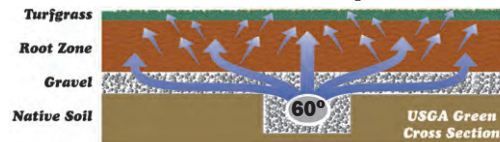

Winter - Outside Temperature 30°

PrecisionAire Outlet Temperature 120°

HEATS ROOT ZONE!

Summer - Outside Temperature 98°

PrecisionAire Outlet Temperature 68°

COOLS ROOT ZONE!

PrecisionAire moves heated or cooled air through the gravel and subsoil surrounding the drain pipe. As a result, our system can moderate the temperature of the root zone. The benefit achieved is a root zone that is kept cooler in the summer and warmer in the winter, which ultimately extends the growing season.

"PrecisionAire System is a great management tool for growing bent grass greens in the transition zone. Moving cool air through the root zone has significant benefit throughout the growing season. In the past, I feared that introducing warm, ambient air into the subsurface would damage turf, but the Precisionaire System cools the air before it enters root zone and actually lowers soil temperatures by 5 degrees or more. During wet periods, the system helps remove excess water and increase aeration."

Tom Walker, GCS, Anne Arundel Manor, Harwood, MD

"The Preserve Golf Club is located in the Biloxi, MS region near Mobile, AL. This area receives more rainfall than any region in the continental U.S. with recent years nearing 100" of total annual rainfall. In 2014, we completely rebuilt our greens. We took advantage of this opportunity and installed "The Precision Loop" under all putting surfaces. The "Loop" paired with the PrecisionAire subsurface aeration system has given us the capability to oxygenate our greens with zero playing disturbance anytime during the growing season by pulling moisture out and oxygen into the root zone thoroughly and evenly. Since our renovation, we no longer battle black layer or other common root zone issues many facilities face. I consider PrecisionAire to be an essential tool in our Agronomic operations that has resulted in consistently elite putting surfaces."

Stephen Miles, The Preserve Club, MS

The PrecisionAire™ portable sub-surface aeration & moisture removal system utilizes the sub-surface drainage of a USGA green.

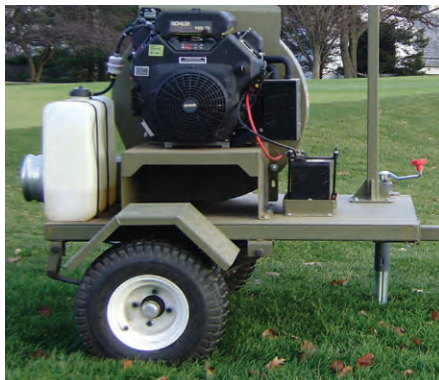

GAS OR ELECTRIC POWERED VACUUM OR BLOWING MODES

Features & Benefits:

- Quiet Operation
- Quick Water Removal
- Quick Gas/Oxygen Exchange
- Pressure & Vacuum Modes
- Quick Connect/Disconnect Fittings

Specifications:

- High Output Blower
- Aerodynamic 8 Blade Aluminum Impeller
- Adjustable Air Flow
- All Aluminum Housing (18hp)
- Heavy Duty Trailer
- Golf Friendly Tires
- Hose Rack (except 465PB-18KBDCA)
- System Control Panel (electric units)
- Completely Self Contained

MODEL 465PB-18KBDCA Gas Powered

- Kohler Command 18hp Engine
- 4500 CFM
- 4" or 6" Intake/Exhaust Quick Connects
- Weight 375 lbs.

Price With Trailer \$ CALL

MODEL 465PB-39A Gas Powered

- Kohler Command 25hp Engine
- 5500 CFM
- 4" or 6" Intake/Exhaust Quick Connects
- Weight 500 lbs.

Green Benefits:

- **Moisture Control:** Drying of the greens through moisture removal from the soil and drainage system.
- **Improves Drainage:** Creates a positive airflow through the soil profile, therefore accelerating the natural draining process.
- **Oxygenates Roots:** Constant oxygenating of the root zone by removing gases which stimulates root growth and results in improved soil quality.

PRECISIONAIRE SUBSURFACE SYSTEMS

PRECISIONAIRE CONCEPT

AIR CONDITIONING & HEATING SYSTEM FOR SUBSURFACE AERATION & MOISTURE REMOVAL

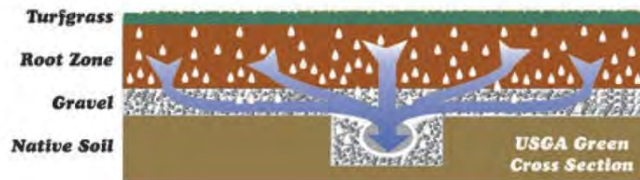

PrecisionAire™ is a self-contained pressure system for sub-surface air movement, which moves temperature controlled air into the sub-surface drainage system of a USGA green.

Our system allows management of soil moisture, oxygen, and temperature levels – permitting healthy and optimal turf growth in extreme climate conditions

PRECISIONAIRE CONCEPT

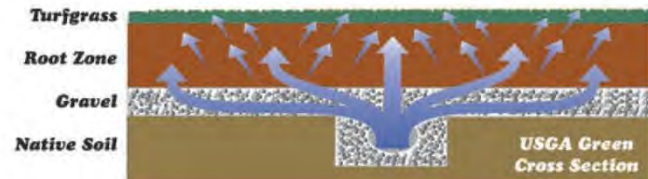

OPERATING MODES & BENEFITS

MOISTURE REMOVAL

The vacuum port of the PrecisionAire is connected to the drainage system. This creates a vacuum in the root zone which allows excess moisture to be removed.

By controlling the moisture in the soil, PrecisionAire helps prevent the occurrence of surface algae, disease and root damage.

AERATION

Gases such as carbon dioxide and methane can gradually buildup in the root zone and cause poor growing conditions.

By moving air through the root zone harmful gases are removed from the entire green.

Winter – Outside Temperature 30°

PrecisionAire Outlet Temperature 120°

HEATS ROOT ZONE!

Summer – Outside Temperature 98°

PrecisionAire Outlet Temperature 68°

COOLS ROOT ZONE!

PrecisionAire moves heated or cooled air through the gravel and subsoil surrounding the drain pipe. As a result, our system can moderate the temperature of the root zone. The benefit achieved is a root zone that is kept cooler in the summer and warmer in the winter, which ultimately extends the growing season.
