Strategic Plan for World Class

Reliability

Kate Kerrigan Operations Director, GPAllied

Doing More With Less

- less expense budget,
- less capital,
- less manpower.

The only way to do more with less is to do it differently.

Learning Objectives

- 1. Define World Class Reliability
- 2. Evaluate Current State
- 3. Define Future State
- 4. Develop a plan to close the gap

Reliability Operating Systems

- Total Productive Manufacturing (TPM)
- Toyota Production System (TPS)
- Total Quality Management (TQM)
- Lean
- Six Sigma
- Benchmarking
 - Society for Maintenance & Reliability Professionals
 - Institute of Industrial Engineers
 - Amazon Books

Common Elements

- Set Vision
- Define Organizational Structure
 - Roles
 - Responsibilities
 - Decision Making Rules
- Set Tactical Goals
- Implement; Start; Change the Way You Operate
- Measure Tactical Goals
- Prioritize and Fix Defects as They Arise
- Continuously Improve

Vision

For The Boss

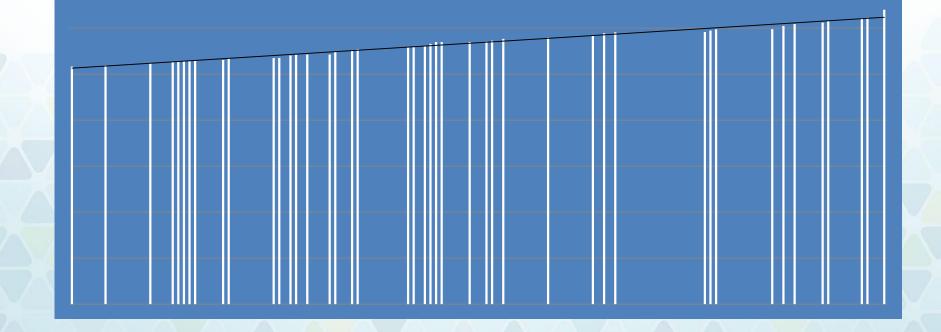

Improve Uptime Optimized Cost No Repeat Failures Zero Breakdowns Clear Concise/Repeatable Personally Meaningful Visual/Observable

For Yourself Weekends Free No Emergency Calls - From Crew - From Boss **Planned Week Real Vacation** Personal Development Time

Performance Improvement 19.3%

Believe

- Commit to the change
- Practice the new operating system
- Do not let anything interrupt the vision
- Be visible and constant cheerleader for strategy
- Welcome feedback

Plan Elements

- Asset Data
- Equipment Maintenance Plans
- Work Execution Management
- Staffing / Work Roles
- Materials Management
- Continuous Improvement
- Vendor Partnership / Management

Asset Data

- Identify all assets
 - Infrastructure (ISO 14224 defines the standard for equipment taxonomy when establishing your equipment hierarchy)
 - ASTM F2446 04(2010) Standard Classification for Hierarchy of Equipment Identifiers and Boundaries for Reliability, Availability, and Maintainability (RAM) Performance Data Exchange
- Parent/Child Relationships
- Components
- Bill of Materials
- Repairable/Swappable Equipment
- Rank Equipment

Equipment Maintenance Plans

- Inspect to Detect
- Time-Based Repair/Replace/Rebuild
- Run to Failure
- Develop asset health plan for all equipment
- Balance the work load across all equipment

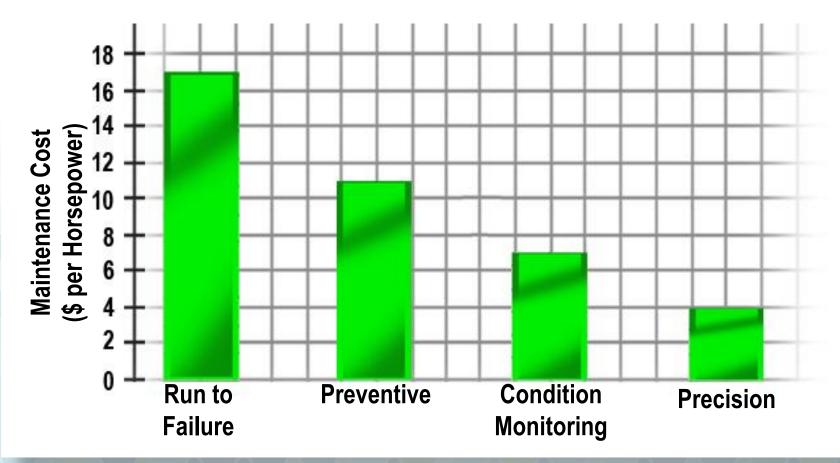

Equipment Maintenance Plans

- Preventive Maintenance
 - Replace/Rebuild based on historical expectations
- Inspections
 - Monitor until equipment defect occurs

Cost Comparison of Maintenance Programs

Source: EPRI Power Generation Study

Inspections / Condition Monitoring

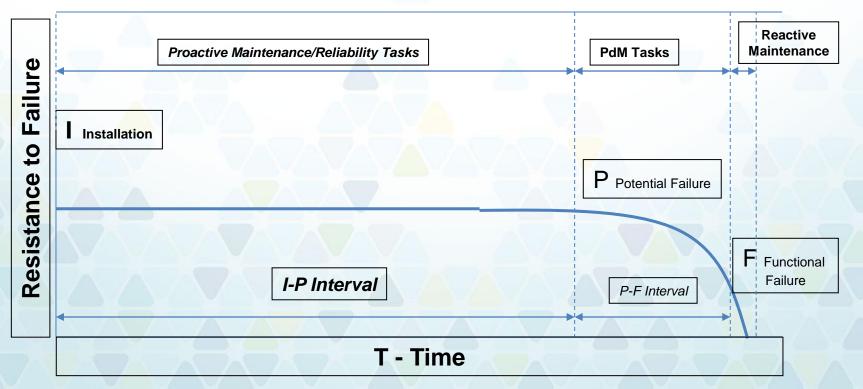

- Continuous Monitoring
 - Algorithm for alarm
 - Alarm Reporting
- Tool Inspections
 - Vibration; Infrared; Ultrasound; Thickness NDT
 - Training Criteria / Qualification
 - Frequency
- Sensory Inspections

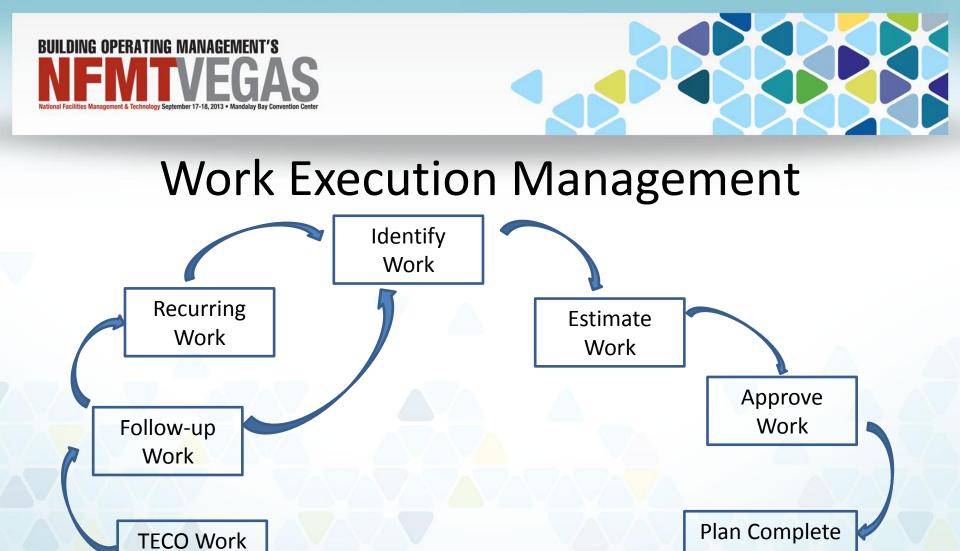

Uptime / Availability

- Mean Time Between Failure (MTBF)
- Mean Time to Repair (MTTR)

Order

Execute

Work

Work

Schedule Work

Organizational Structure

• Staffing/ Work Roles

Maintenance

Planning &

Scheduling

Maintenance & Reliability Leader

Plant Engineering Condition Monitoring Team Maintenance Supervisor & Team

MRO Materials

Business Processes

- Map RACI / Swim Lanes
 - Responsible
 - Accountable
 - Consulted
 - Inf<mark>or</mark>med
- Reliability Plan
 - Involve everyone in understanding the system
 - Expectations
 - Publish metrics

Continuous Improvement

- Precision Maintenance
- Engineering
- Data Mining
- Root Cause Analysis
- Metrics / Steering the Ship
- Communication Plan

Current State

- Determine barriers to vision
 - Equipment Health
 - Access to Equipment
 - Organization / Responsibilities
 - Skills
 - Organizational Support

Define Future State

- Write down plan
- Define trigger to move to next step
- Constantly refer to the playbook
- Be prepared for resistance
- Short-term vs. long-term costs

Determine Metrics

- Set up CMMS to give them
 - Mean Time Between Failure (MTBF)
 - Schedule Attainment
 - On Time Work Completion
 - % Work Emergency
 - Downtime
 - Mean Time to Repair (MTTR)
 - Number of Stops/Defects

To Pilot or Not To Pilot

What Good Looks Like

Is there enough coverage? Is the frequency correct? Is there a Process Quality standard? Is there a Personnel Quality standard? Is there consistency of execution? Is it efficient execution? Is performance improving? Is there an innovation or corrective action process?

Everyone Involved

Is everyone included? Do all colleagues have a role? Is success critical to everyone? Are pilot boundaries reflective of overall operation? Is work prioritized to reflect new goals? Do you have the manpower resources to manage the entire operation?

Data Mining

- MTBF
- Bad Actors
- Population
- Continuous Improvement

Metrics are essential to tracking progress and determining when to make corrections to the activities around reliability

Develop a Plan

- Write down the plan
- Publish metrics regularly
- Organize to the new work rules
- Believe in your plan
- Budget for initial costs

Strategy to World Class Reliability

- Define your Vision
- Project plan to achieve vision
- Organize resources to support plan
- Train to meet expectations
- Define triggers to ensure progress
