# Introduction

Thank you for taking the time to familiarize yourself with our invoicing program. This guide is intended to help you navigate your way around the program and teach you about the key features.

This invoicing program was built to be user friendly and straight forward. The options and features was designed for people with little to no knowledge of how an invoicing program works. We guarantee that you will be able to start using this program when you are finished with this guide.

Thank you for purchasing this invoicing program and hope you find it to be a valuable tool for your business. Let's get started!

# The Splash Screen

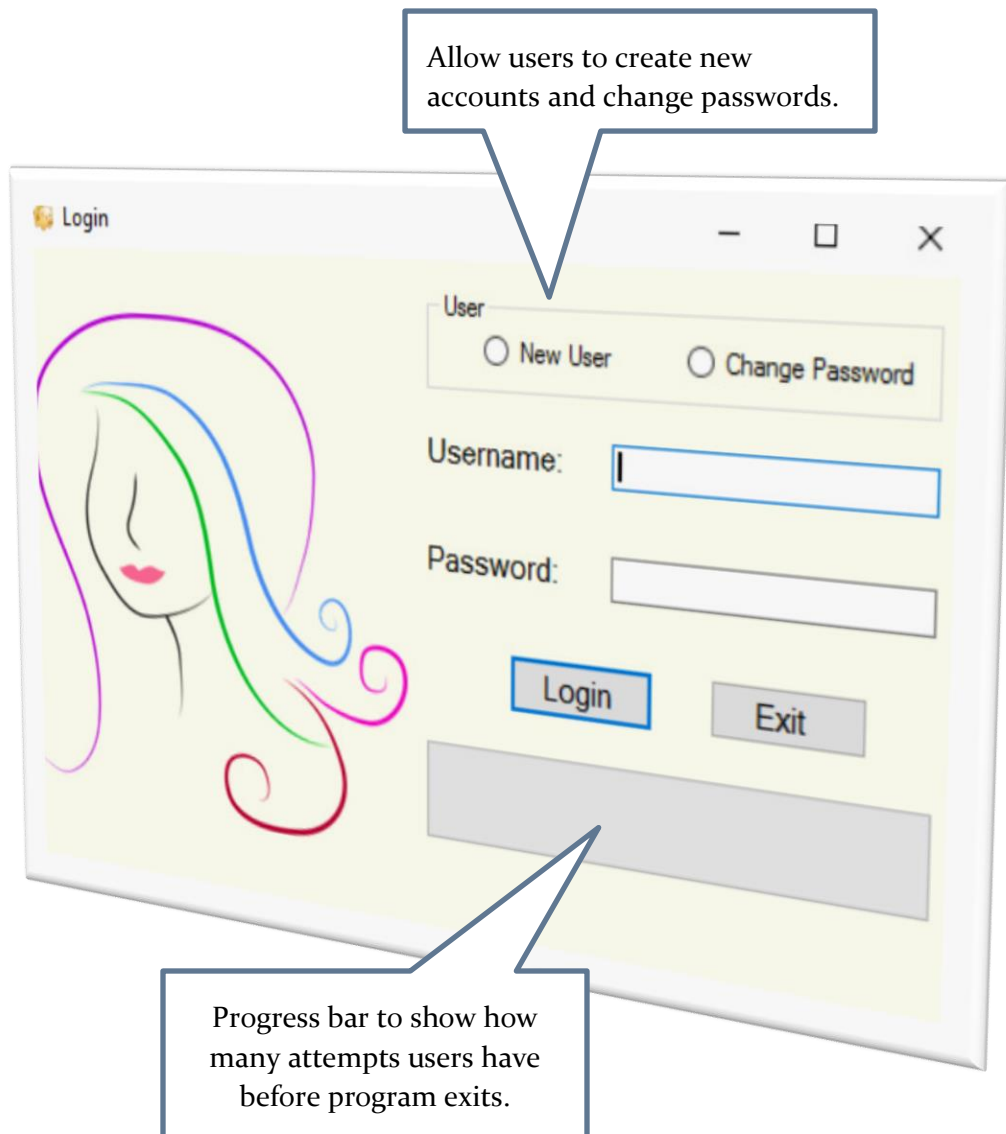

The first thing you will notice when you open this program is the splash screen. This screen gives you value detail about the program and your business. It is design to popup and orient in the middle of your screen for a few second while your program is loading.

Current version is 1.0 as of this guide.

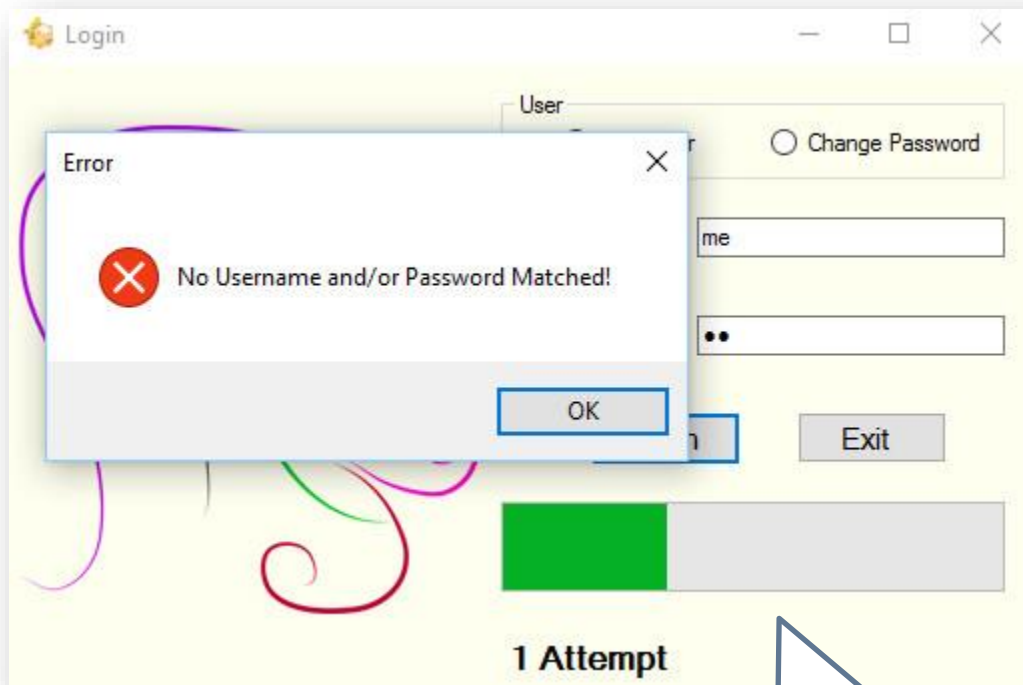

# Login Screen

The login screen (shown below) is the second screen that will be prompted when you run the program. This screen allows users to create a new account or change your password in case you forgot. It is important to note that the user will have 3 logins attempts to get the password right. If user fails to provide the correct password, the program will exit. There is a progress bar to show the user their remaining attempts.

# Login Screen Error

There will be an error message that appears every time you enter the wrong password or user name. The progress bar will display the missed attempts. If you fail all 3 attempts, the program will close. See example below.

The progress bar will display your attempts

# The Main Entry

The screenshot shows a software window titled "Sue's Salon and Spa". The window has a menu bar with "File", "Edit", "Format", "Tools", and "Help". Below the menu bar are tabs for "Main", "Stuff", and "Web Browser". The main content area features the program's logo, "Sue's Salon and Spa", which includes a yin-yang symbol. The interface is divided into two main sections: "Invoice Information" on the left and "Client Information" on the right. The "Invoice Information" section contains several input fields: "Description" (a dropdown menu), "Number of Styling", "Price of Styling", "SubTotal", "Tax", "Total Cost", "Purchase Date" (set to 12/06/16), "Accumulate Number of Styling", and "Accumulate Grand Total". There is also a checkbox labeled "Check for Discount". The "Client Information" section includes fields for "Full Name", "Address", "City", "Zip Code", and "State" (set to AK). It also has radio buttons for "Existing Client" and "New Client", and buttons for "Sort" and "Print". At the bottom of the window are four buttons: "Clear", "Save", "Exit", and "Display". The status bar at the very bottom shows "Ready" and a small input field.

The main entry of the program is designed to be user friendly and easy to use. All of calculation and inputs are displayed on the main page of the program. User can select from description, number of styling, price, and the program will calculate the subtotal before taxes. Users can also add any discount they wish to apply by checking the discount box.

The menu is easy to understand

Invoice Information

Description	<input type="text"/>
Number of Styling:	<input type="text"/>
Price of Styling:	<input type="text"/>
SubTotal:	<input type="text"/>
Tax:	<input type="text"/>
Total Cost:	<input type="text"/>
Purchase Date:	<input type="text" value="12/06/16"/>
Accumlate Number of Styling:	<input type="text"/>
Accumlate Grand Total:	<input type="text"/>
<input type="checkbox"/> Check for Discount	

Clear Save Exit

These areas need to be inputted for calculation of total and tax

There is also a client information section for collecting client's information for future sales or promotional distribution. This section allows users to input client's name, address, and whether they are new or existing clients.

Client Information

Full Name:   Existing Client

Address:   New Client

City:

Zip Code:

State:

This area is where your data table will display when you enter your price, quantity, and description.

Once users have inputted all the required information, the program will calculate and generate the cost of each styling in the invoice box. If you click on the display button, the program will generate a table. Below is an example of how it should look.

## Report #1

The screenshot shows a software window titled "Sue's Salon and Spa" with a menu bar (File, Edit, Format, Tools, Help) and tabs (Main, Stuff, Web Browser). The interface is divided into two main sections: "Invoice Information" and "Client Information".

**Invoice Information:**

- Description: Consult (dropdown)
- Number of Styling: 5
- Price of Styling: \$43.99
- SubTotal: \$219.95
- Tax: \$11.00
- Total Cost: \$230.95
- Purchase Date: 12/07/16 (calendar icon)
- Accumlate Number of Styling: 7
- Accumlate Grand Total: **\$1,566.79**
- Check for Discount

**Client Information:**

- Full Name: JOHN SMITH
- Address: 10112 85th Street East
- City: Parrish
- Zip Code: 34219
- State: FL (dropdown)
- Existing Client
- New Client
- Buttons: Sort, Print

**Generated Table:**

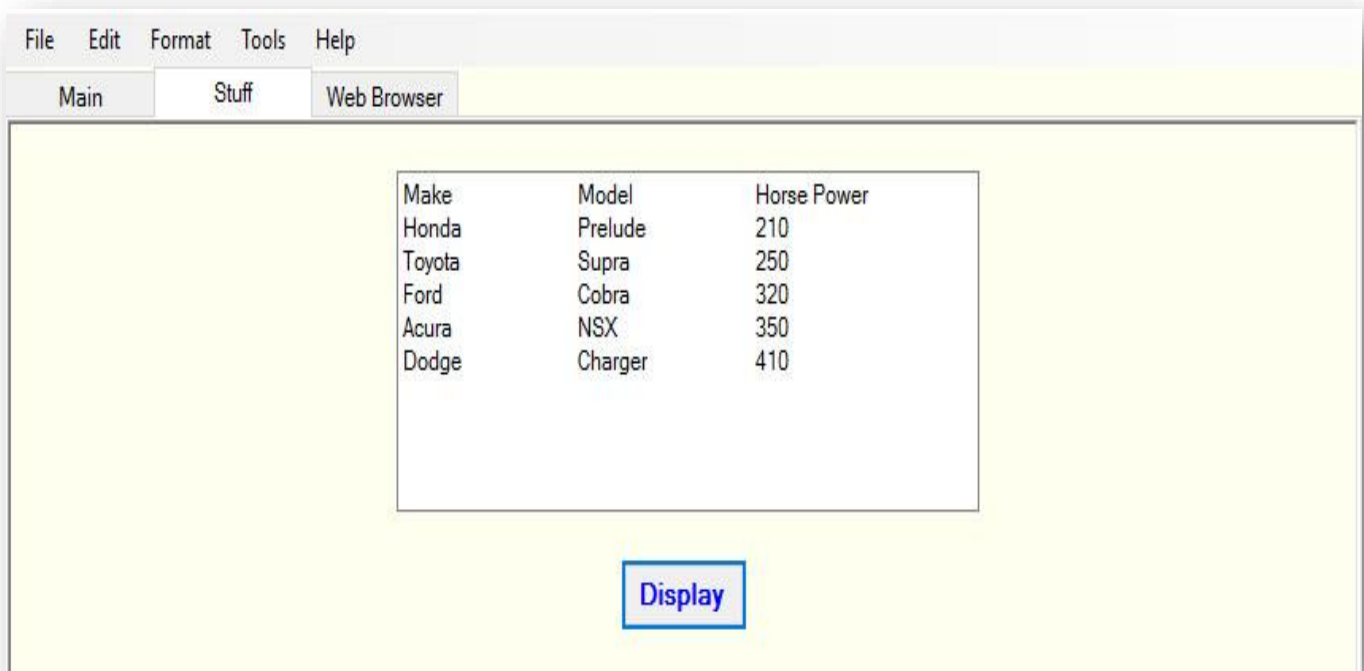

Description	Cost	Quantity	Total
Hair Cuts	\$12.99	12	\$155.88
Massage	\$23.99	17	\$407.83
Consult	\$43.99	5	\$219.95
GrandTotal:			\$783.66

At the bottom of the window, there are buttons for "Clear", "Save", "Exit", and "Display". A "Please Wait" indicator is visible at the bottom left, and a green progress bar is at the bottom right.

This is the main report that generates. All that you see here is how it should look like when you input the information according to each box. The only thing you can't input is the tax. The tax box will generate by itself in accordance to the tax laws of each state.

## Report #2

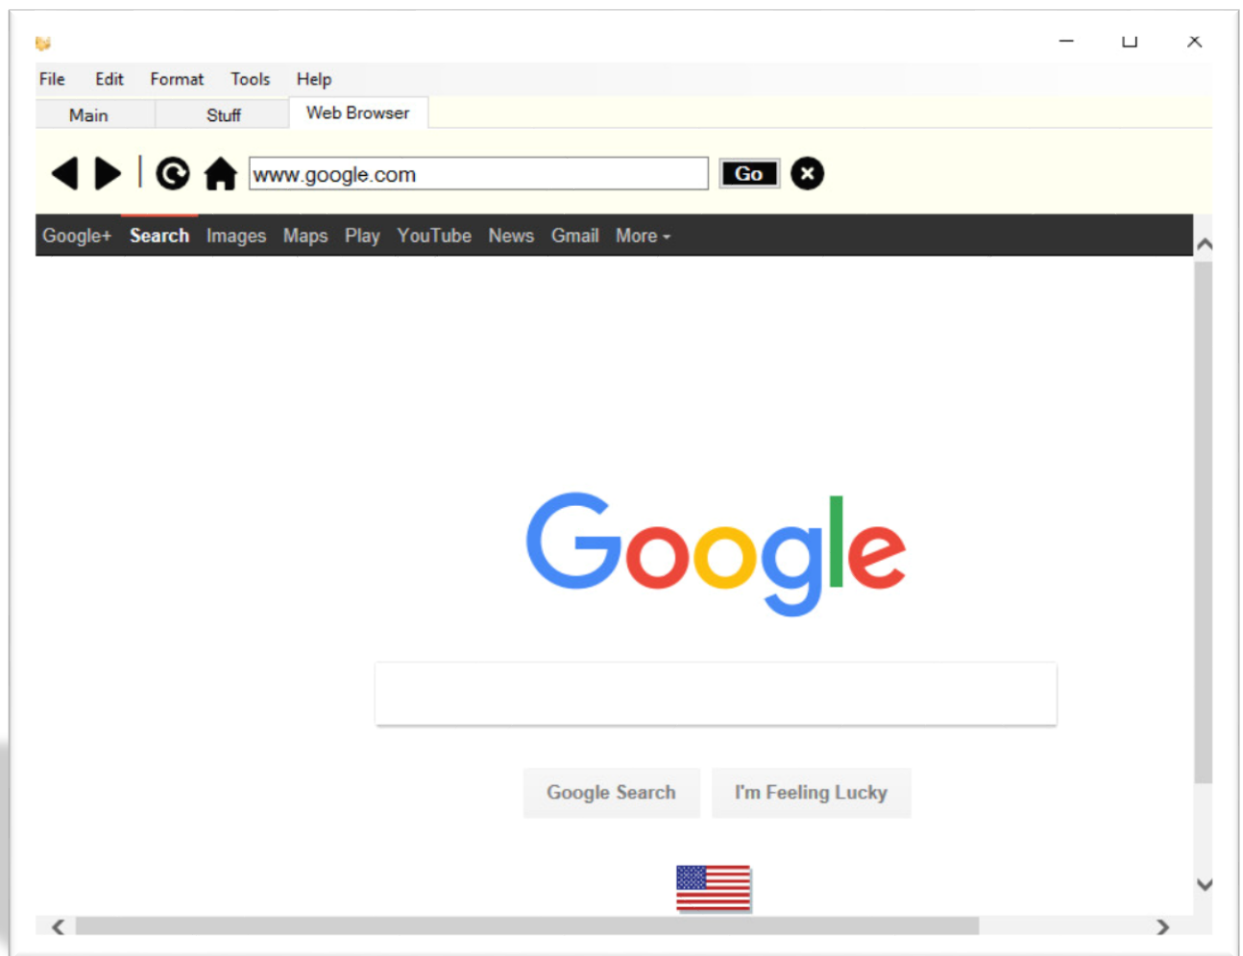

This is another example of a report that will generate when you click on the display button in the stuff tab. This data shows how many cars are available and what their horsepower will be, so that it can give you a better understanding of what

type of car you want are looking for.

# Web Browser

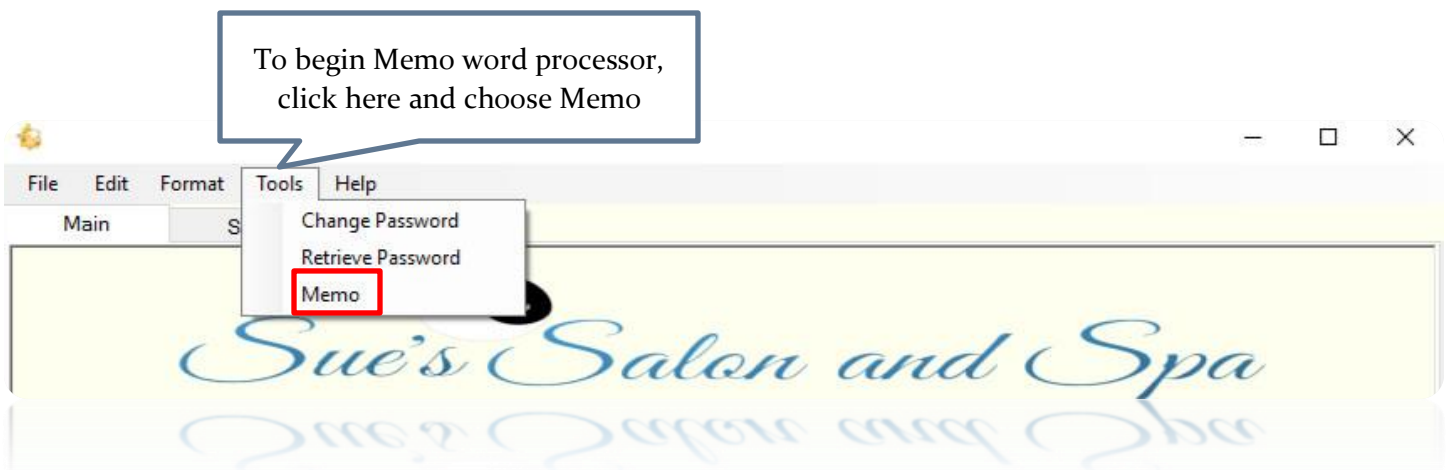

This invoice program comes with a built-in web browser just in case you need to research a product or service. There is no need to open a third-party application. The web browser is clean and user friendly as well. Just go to the Web Browser tab to begin your search. The default search engine will be Google.

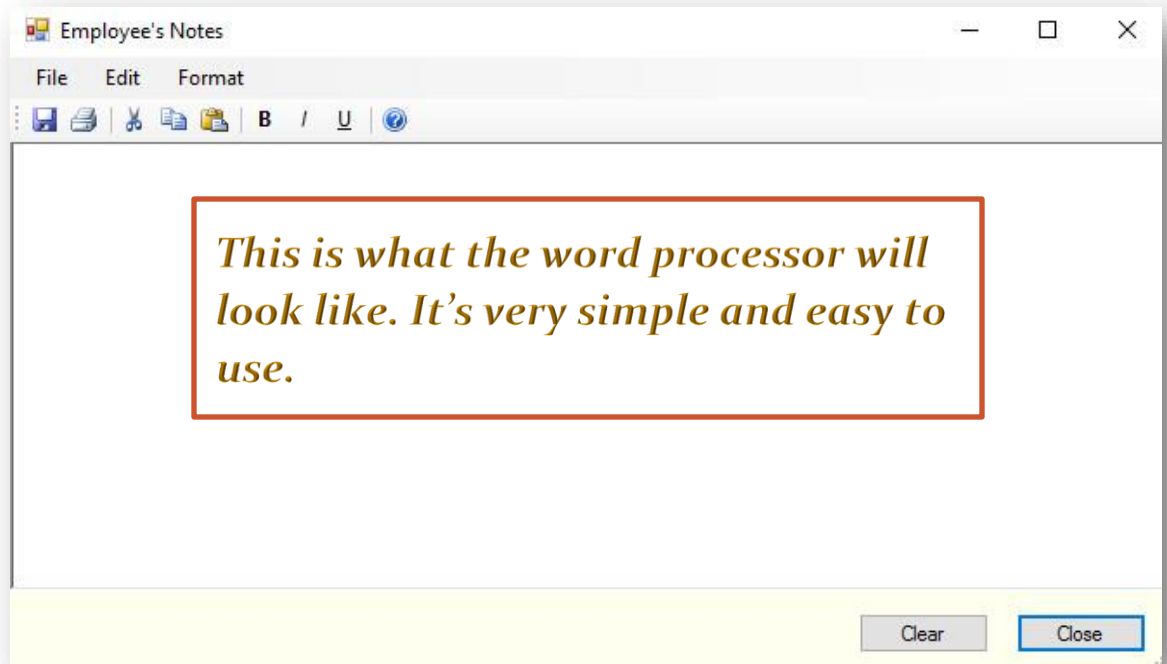

# Word Processor

Along with the web browser, this program also comes with a word processor. The word processor allows you to jot down notes, write up reports, etc.

To access the word processor, click on Tools > Memo to open the window.

Once memo is selected, the word processor will open in a separate window. It's a simple little tool that you will find easy to use.

Should you ever need any help, there is also a help section that you can refer to by clicking the help button.

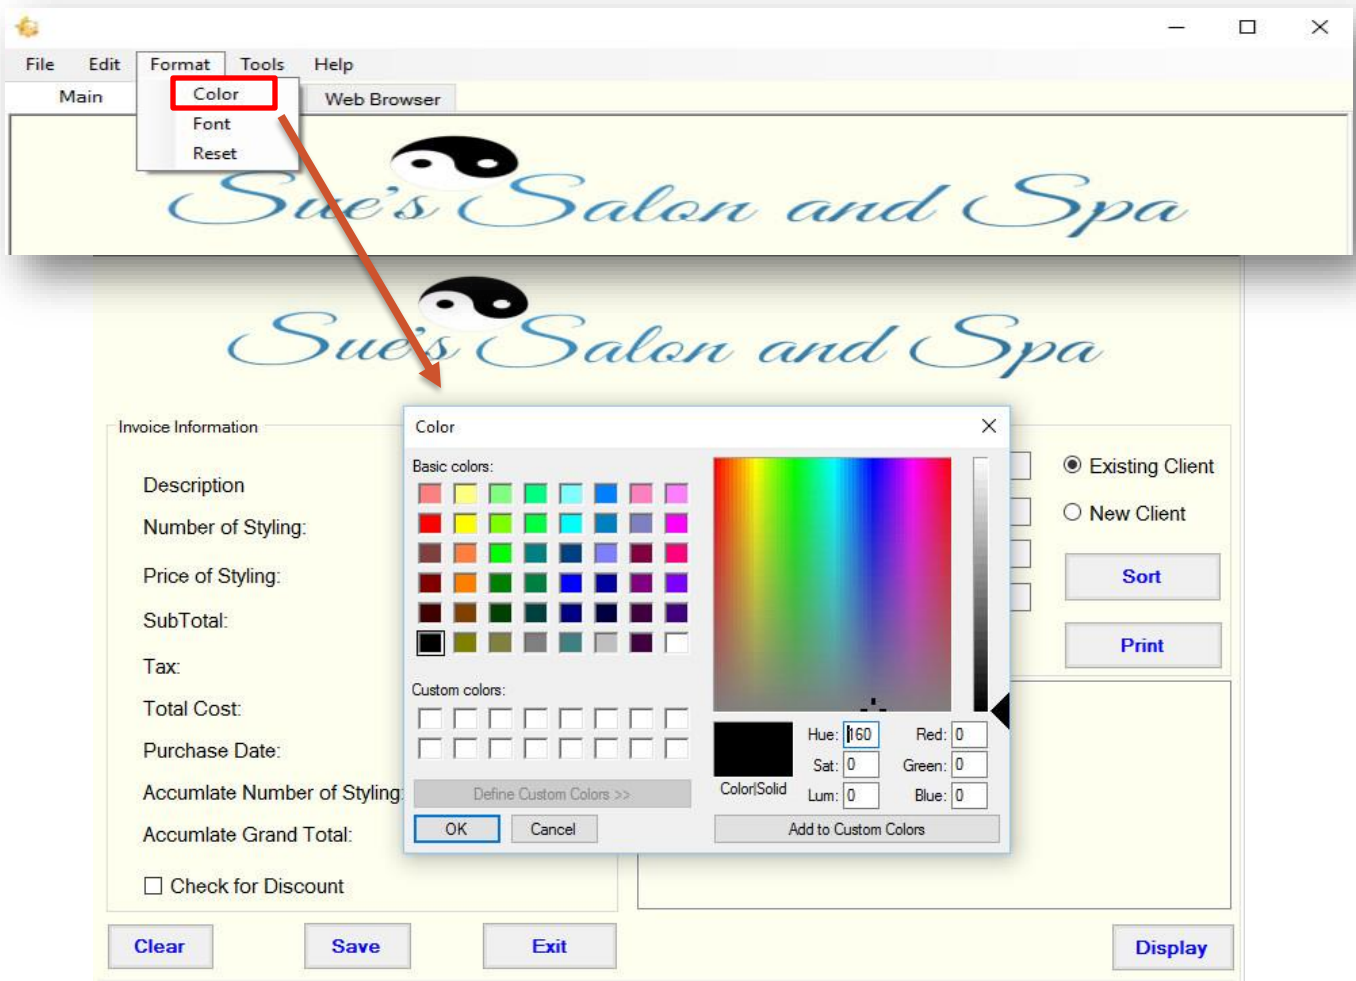

## Menu Options

The menu bar is a great tool that allows you to choose from a few options that will enhance your document. We will go through the options below.

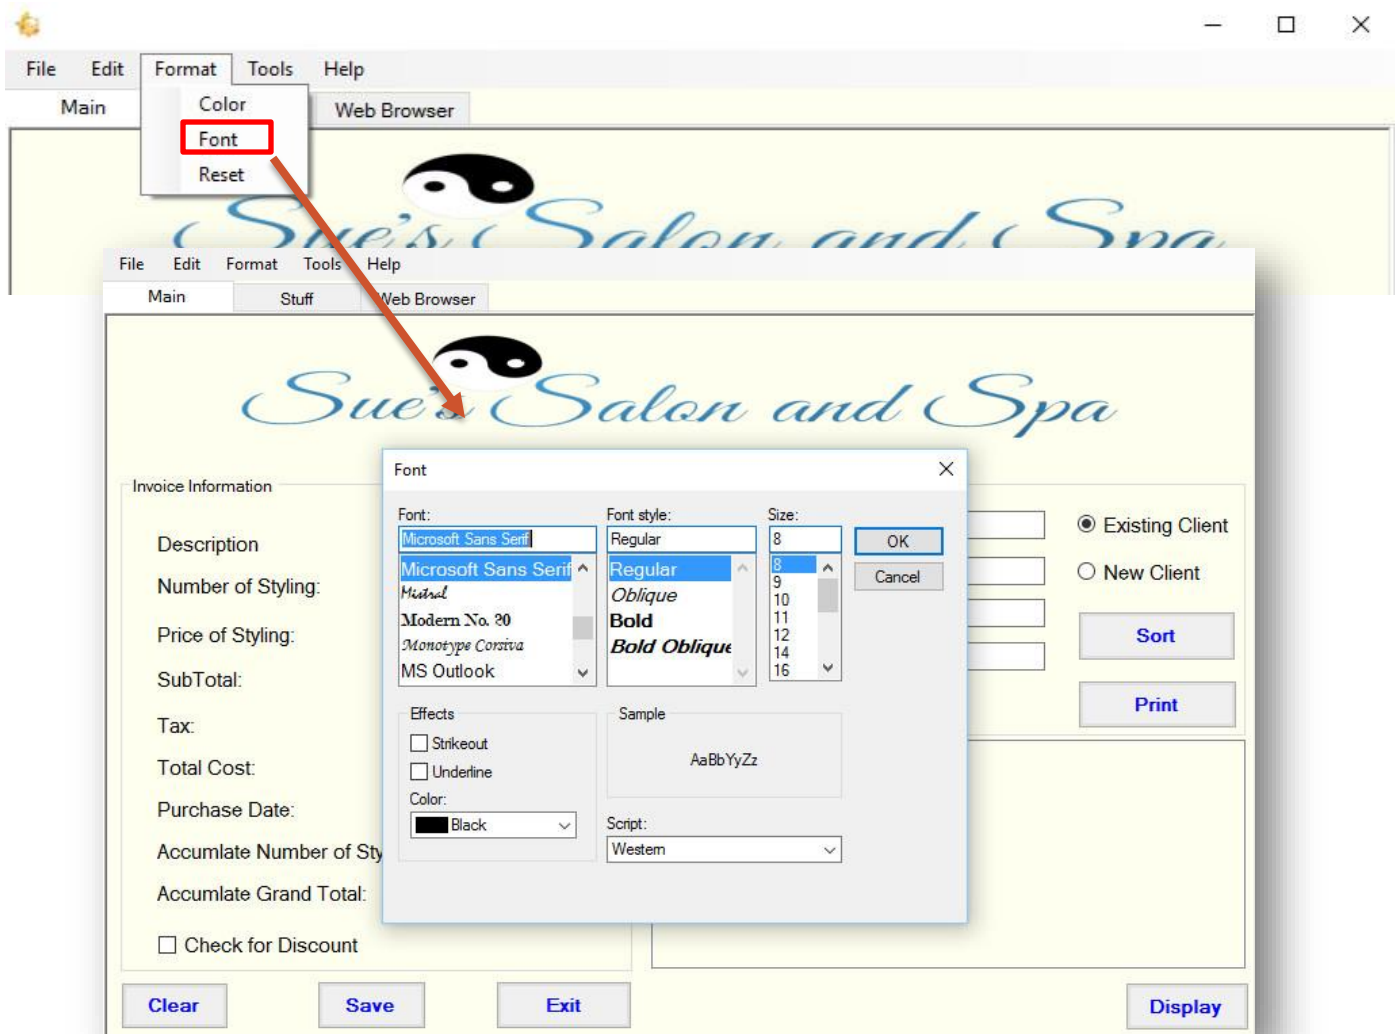

# Color Dialog Box

The great thing about this program is that you can customize it to how ever you feel comfortable with. With the color dialog box, you can change the color that works for you. There is an assortment of different color to choose from. Just go to the main menu, select format, and select the color option.

# Font Dialog Box

Just like the color scheme of your data, you can also change the font as well. There are a number of font options available. All you have to do is go to the main program menu, select format tab, and there is an option for font.

# About Box

Along with getting help, users can also view the about screen to get information on the program and see if they have the latest and greatest updates available. It is important to maintain up to date software so that key issues and bugs can be fixed.

# Error

This program allows you to make simple calculations. But the information that you enter must match the criteria or else it will not accept your input. The most common error is entering a word rather than a number in the numbers field or wrong punctuation. Below are some examples of the type of errors you may encounter.

This is a number's only error

Invoice Information

Description: Hair Cuts

Number of Styling: Money

Price of Styling:

SubTotal:

Tax:

Total Cost:

Purchase Date: 12/11/16

Accumlate Number of Styling:

Accumlate Grand Total:

Sort

Print

Warning!

Enter only numbers for Hours

OK

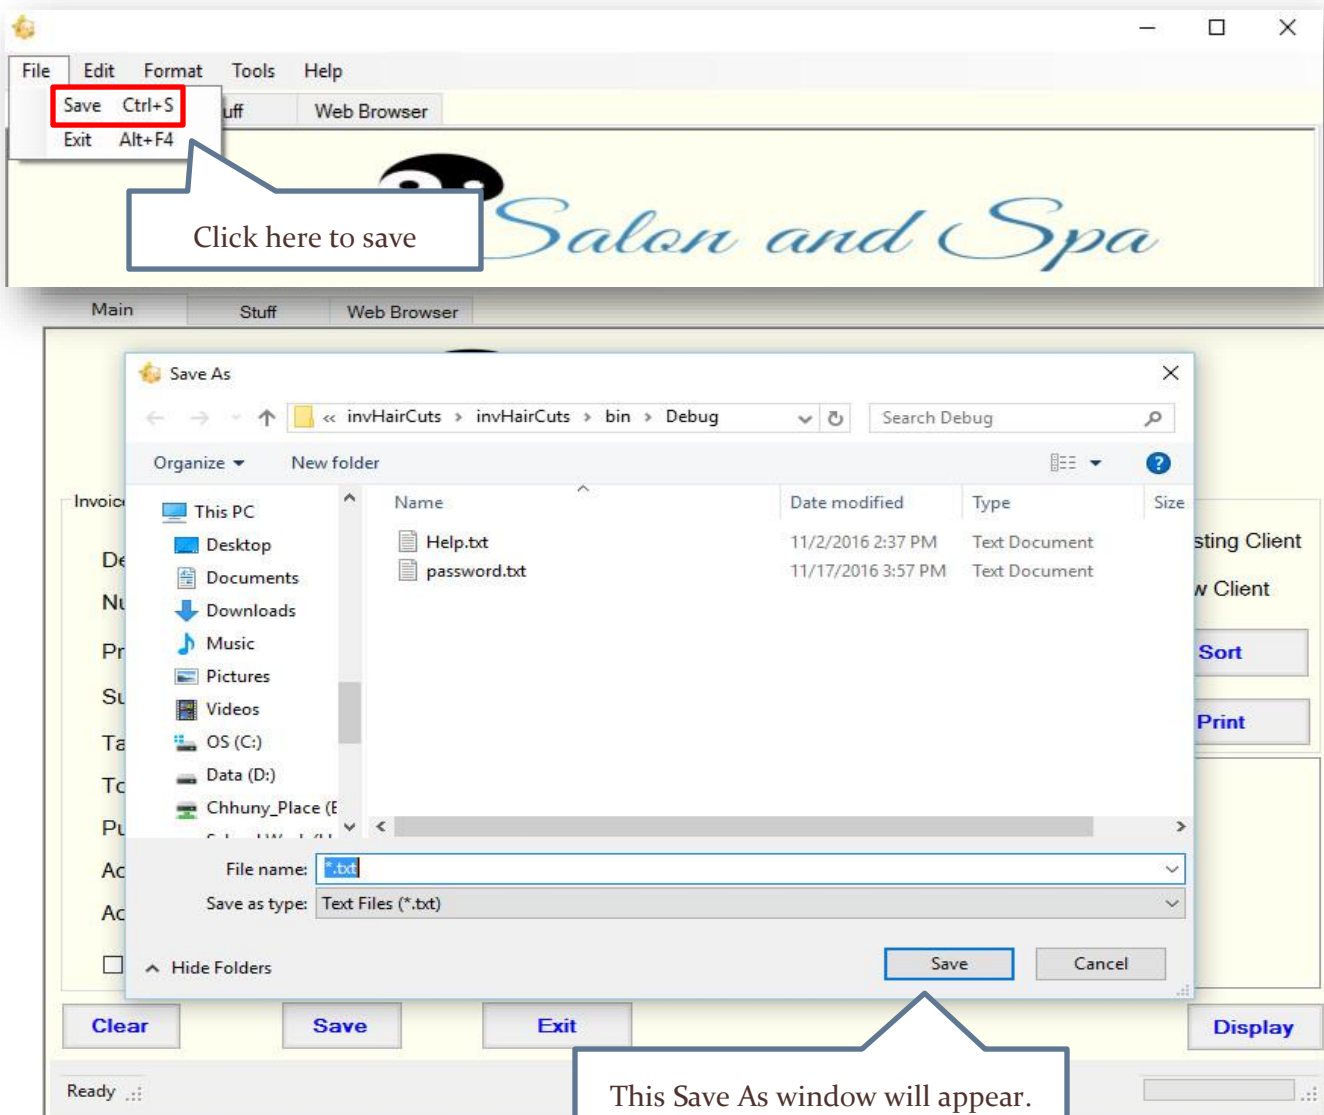

Clear Save Exit Display

Ready ...

You will be prompt this message and can't do anything else until you correct the issue.

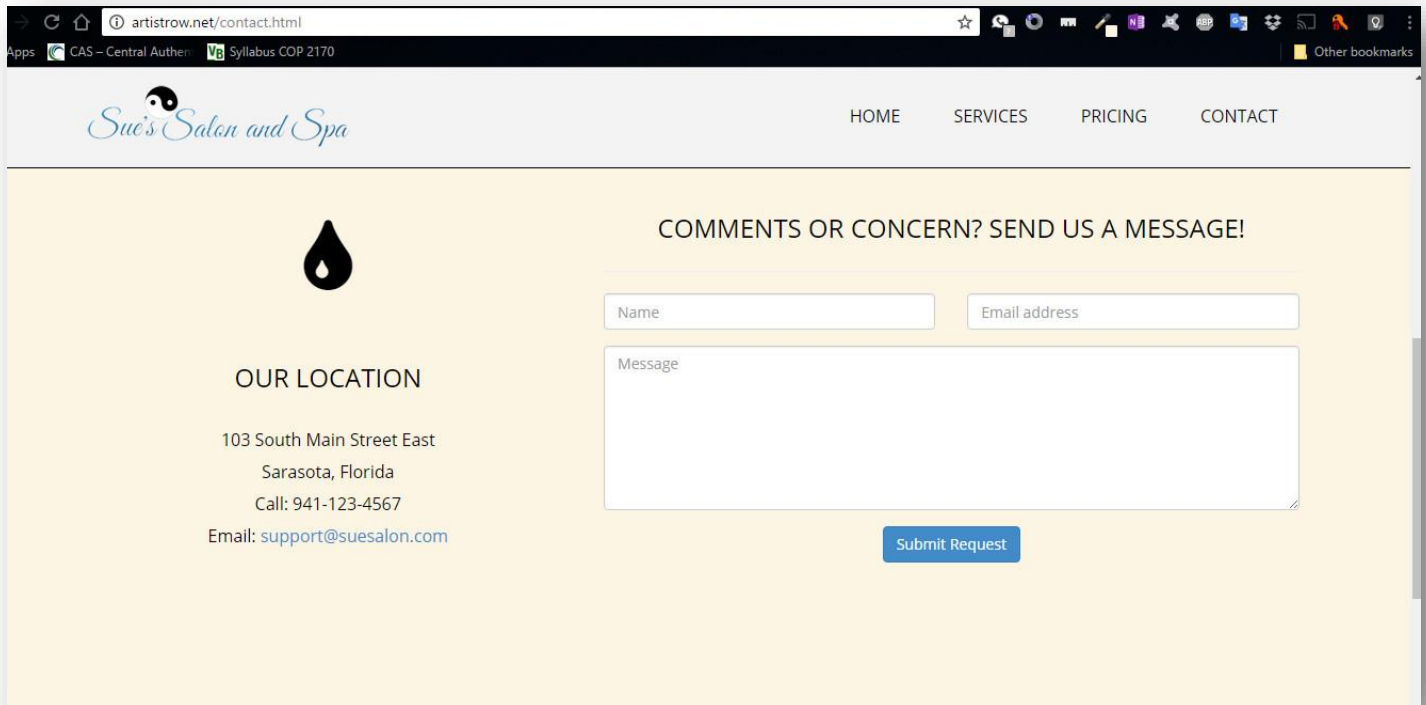

# User Backup

When you are done with your calculations, saving and backing up the data is pretty simple. On the menu strip, there are set of tabs. The file tab give you the option to save your work.

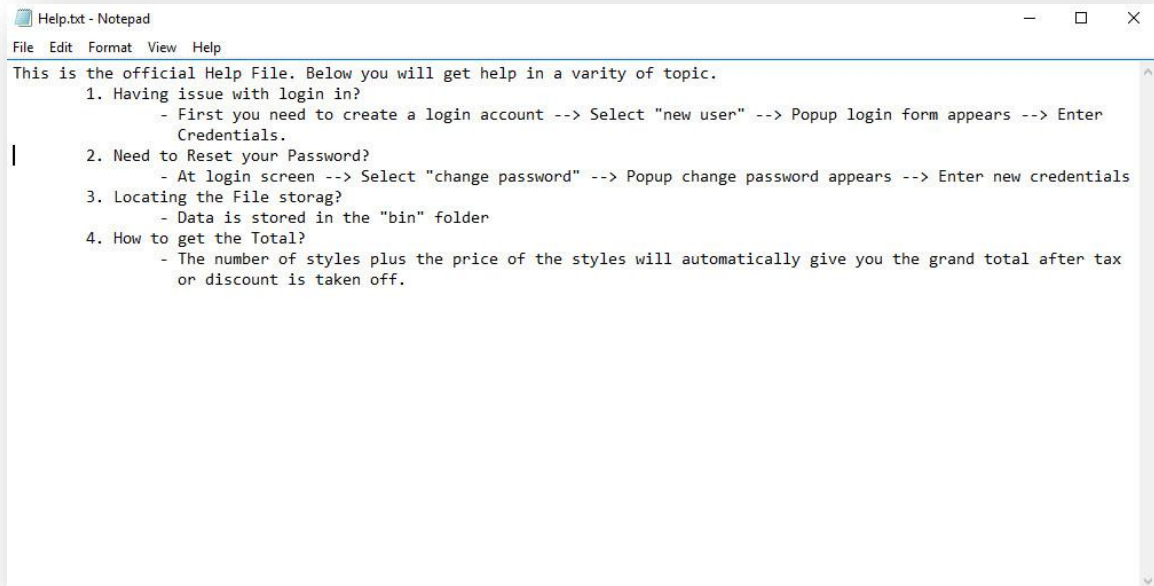

# Help

Should you run into any trouble, the program offers 2 ways to get the help you need. In the menu tab under “Help”, there are 2 options that allows you to open the help documents that came with the program (figure below), and a web link to the contact page of our website.

The “View Help” option will allow you to view documents that will help you trouble shoot key issues.
