

Sustainability Merit Badge

Scouts BSA

- Safety

- Follow your family's rules for going online
- Protect your privacy
- Do not open emails or files from people you do not know or trust
- If you receive/discover information that makes you uncomfortable, leave it and tell your parents
- Do not believe everything you see or read online
- NEVER agree to get together with someone you "meet" online
- NEVER give personal information like email, phone number, address
- NEVER share your Internet passwords with anyone
- NEVER shop online unless you have your parent's permission to do so
- Be a good online citizen

Requirement 1

- ★ Before starting work on any other requirements for this merit badge, write in your own words the meaning of SUSTAINABILITY. Explain how you think conservation and stewardship of our natural resources relate to sustainability. Have a family meeting, and ask family members to write down what they think sustainability means. Be sure to take notes. You will need this information again for requirement 5.

Sustainability Definition

- ★ The methods of harvesting or using resources in ways that do not squander or permanently damage them.
- ★ Meeting today's needs without depleting resources for future generations.
- ★ Interdependence of people, environment, and economics
- ★ <https://www.youtube.com/watch?v=gTamnlXbgqc>

Three Pillars

★ People

- Our family and neighbors are the engine of the economy. Long-term health and welfare of people are interwoven with the other pillars.

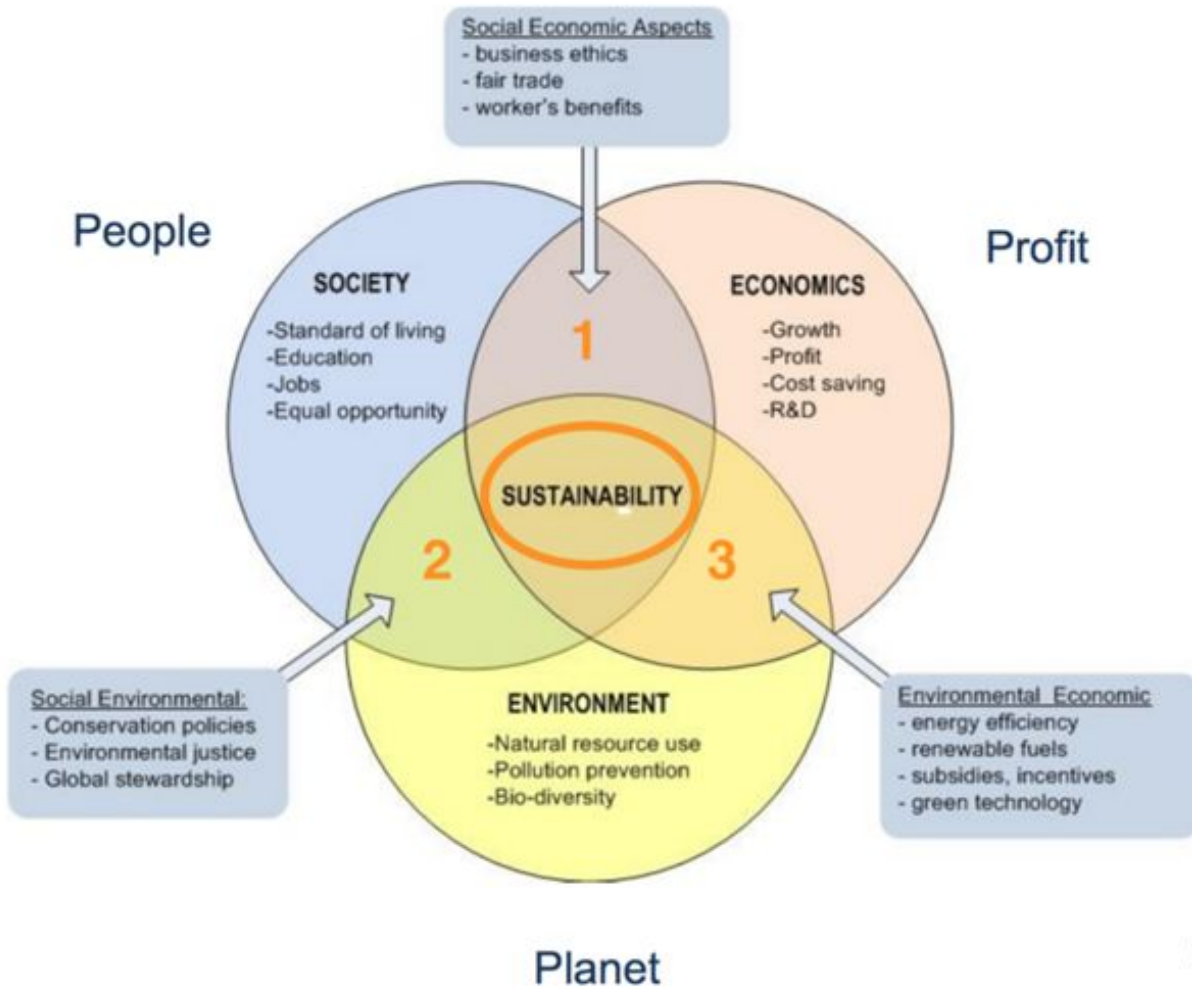

★ Economics

- The flow of money and growth are important to business and can benefit our quality of life. Continued job growth, shareholder value, and employee wages are important.

★ Environment

- Natural systems support the life of all things. Bees pollinating crops, forests filtering pollutants from the air, and wetlands purifying water are forms of valuable resources.

★ https://www.youtube.com/watch?v=_5r4loXPyx8

Requirement 2: Water

- ★ Average American uses 400 gallons of water daily at home.
 - Approximately 146,000 gallons per year per family
- ★ Less than 1% of the water on Earth can be used by humans
 - Everything else is salt water or water permanently frozen
- ★ Surface water vs Ground water
 - River, Lake, or Reservoir vs Underground Aquifer

Requirement 2: Water

Drinking Water Sources

Where do freshwater supplies come from?

Surface water

- 💧 Supplies 64% of public water systems
- 💧 Comes from rain and snow
- 💧 Accumulates in rivers, streams, and lakes
- 💧 Piped and pumped to water treatment centers

Groundwater

- 💧 Supplies 36% of public water systems
- 💧 Comes from rain and snow
- 💧 Seeps into the ground and is then stored in natural aquifers
- 💧 Must be accessed at a natural spring or pumped out of the ground with a well

Requirement 2: Water

Requirement 2: Water

★ Public Water Systems

- <https://www.epa.gov/sites/production/files/2017-10/documents/epa-ogwdw-publicwatersystems-final508.pdf>

★ Well

- Private source of drinking water and can be expensive to dig
- Aquifers can run dry or become contaminated with pollutants like fertilizers and chemical waste
- Contaminated by seawater, if near an ocean
- Costs money to maintain or replace the pumps/pipes/hot water heater

★ Septic Tank

- Wastewater from toilets, showers, sinks, and laundry
- More people in house means more waste: needs to be cleaned out more often
- Company hired to pump out the tank and take it to a treatment facility- can cost a lot of money

Requirement 2: Water

Why It's Important To Conserve Water

The infographic features five main points, each with an illustration and a text box:

- To prepare for future droughts:** Illustration of a sun, a cracked tree, and cracked earth.
- To guard against rising costs & potential conflict:** Illustration of two dollar bills and a red upward-pointing arrow.
- To preserve the environment:** Illustration of a small green plant growing from a mound of brown soil.
- To make water available for recreational purposes:** Illustration of a pink flamingo-shaped inflatable ring in a pool of water.
- To strengthen communities:** Illustration of two hands shaking in a firm grip.

Additional visual elements include a hand turning a faucet handle with a single drop of water falling, and a splash of water at the bottom right.

Requirement 2: Water

- a. Develop and implement a plan that attempts to reduce your family's water usage. As a family, discuss water usage. To aid in your discussion, compare a few months of past water bills. As a family, choose 3 ways to reduce water consumption. Implement those ideas for one month. Share what you learned with your counselor, and tell how you think your plan affected your family's water usage.

Requirement 2: Water

- ★ MLGW: Memphis Light Gas and Water
 - <http://www.mlgw.com/images/content/files/pdf/ReadingYourMeter.pdf>

Requirement 2: Water

in the window of the
envelope.

Amount Due: \$ 708.85
Due Date: October 12, 2007

If received later, amount due is \$717.11

Requirement 2: Water

- ★ <https://wateruseitwisely.com/100-ways-to-conserve/?view=list>
- ★ Keep showers under 5 mins
- ★ Turn off water while brushing teeth
- ★ Run dishwasher only when full
- ★ Run washing machine only when full
- ★ Fix any leaks in the house: toilet, sinks
- ★ Install rain barrels
- ★ Industrial recycling of “gray water” - waste water that has been treated
- ★ Businesses recycling or repurposing water

Requirement 2: Water

b. Using a diagram you have created, explain to your counselor how your household gets its clean water from a natural sources and what happens with the water after you use it. Include water that goes down the kitchen, bathroom, and laundry drains, and any runoff from watering the yard or washing the car. Tell 2 ways to preserve your family's access to clean water in the future.

A typical house plumbing system

© 2007 Encyclopædia Britannica, Inc.

Requirement 2: Water

- ★ 4 sand aquifers under Shelby County: Memphis Aquifer, Fort Pillow Sand Aquifer, 2500 Foot Aquifer, Coffee Sand Aquifer. MLGW operates 175 wells throughout Shelby County, making it one of the most extensive artesian well systems in the world.

Requirement 2: Water

★ Water Source Protections

- Check Consumer Confidence Report
 - <https://www.epa.gov/ccr/ccr-information-consumers>
- Use/Dispose of Harmful Materials Properly
 - Don't pour hazardous waste down the drain, on the ground, into storm sewers
 - Motor oil, pesticides, leftover paint/paint cans, mothballs, flea collars, household cleaners
- Limit lawn fertilizers and pesticides
- Dispose of medications properly
- Develop working partnerships with businesses: agricultural and manufacturing, and communities to prevent pollution

Requirement 2: Water

c. Discuss with your counselor 2 areas in the world that have been affected by drought over the last 3 years. For each area, identify a water conservation practice (successful or unsuccessful) that has been used. Tell whether the practice was effective and why. Discuss what water conservation practice you would have tried and why.

Requirement 2: Water

<https://www.drought.gov/drought/>

<https://gis.ncdc.noaa.gov/maps/ncei/drought/global>

<https://www.ready.gov/drought>

Requirement 2: Food

- ★ Americans waste more than 65 BILLION pounds of food each year
 - Approx \$2,200 per year thrown away by each household
- ★ Food waste is the single largest component of municipal solid waste that ends up in landfills and incinerators
- ★ More than 60% of the waste can be avoided
- ★ <https://www.youtube.com/watch?v=6RlxySFrkIM>
- ★ WASTE NOT, WANT NOT.

Requirement 2: Food

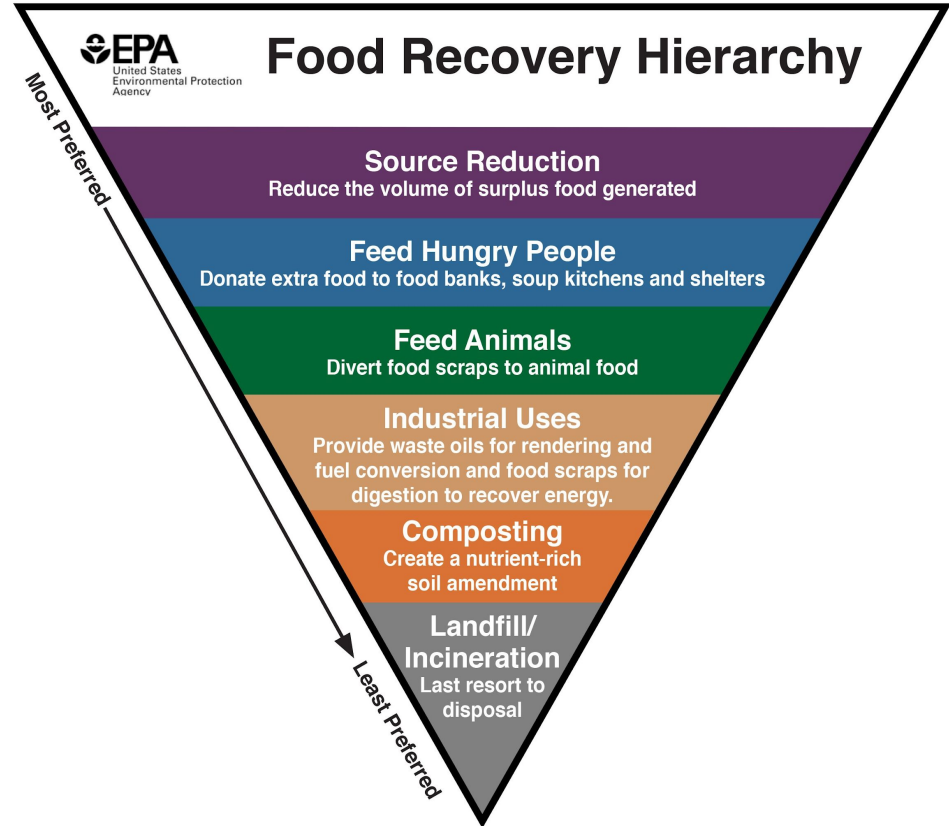

★ Food waste concerns

- Wasting money
- Wasting food that could go to people in need
- Contributing to methane production: a greenhouse gas that is a big concern for the planet that is produced by food breaking down at the landfill
- Wastes the energy, water, labor, and other costs that go into growing, processing, and transporting food from farmers and factories to consumers

Requirement 2: Food

- ★ Waste prevention
 - Source reduction/Prevention
 - Prevent waste before it is created
 - Feeding people
 - Donating fresh, nutritious food to those in need
 - Feeding animals
 - Feeding safe, fresh food scraps to animals (like pig farms)
 - Industrial uses
 - Rendering fat, oil, and grease and turning into products or biofuel
 - Composting
 - Turning food waste into valuable soil amendment
 - Key ingredient in Organic Farming

Requirement 2: Food

★ Source reduction

- Plan family meals, pay attention to portion size, and check to see what ingredients you already have
- Make a shopping list and stick to it
- Check refrigerator temperature. Food should be stored between 33.8-41 degrees F.
- Put new food behind the old food in storage.
- Try not to throw away fresh food. Freeze it, add it to other meals, get creative with leftovers for lunch
- Serve small portions. People can get seconds.
- Buy the precise amount of fresh vegetables and fruit you need for your meals. Same for deli meats and cheeses.
- If buying in bulk, food and prepared meals can be frozen in portions that are sized for a single meal for your family
- Set up a compost bin

Requirement 2: Food

- a. Develop and implement a plan that attempts to reduce your household food waste. Establish a baseline and then track and record your results for 2 weeks. Report your results to your family and counselor.

<https://www.epa.gov/sites/production/files/2015-08/documents/food-waste-log.pdf>

Requirement 2: Food

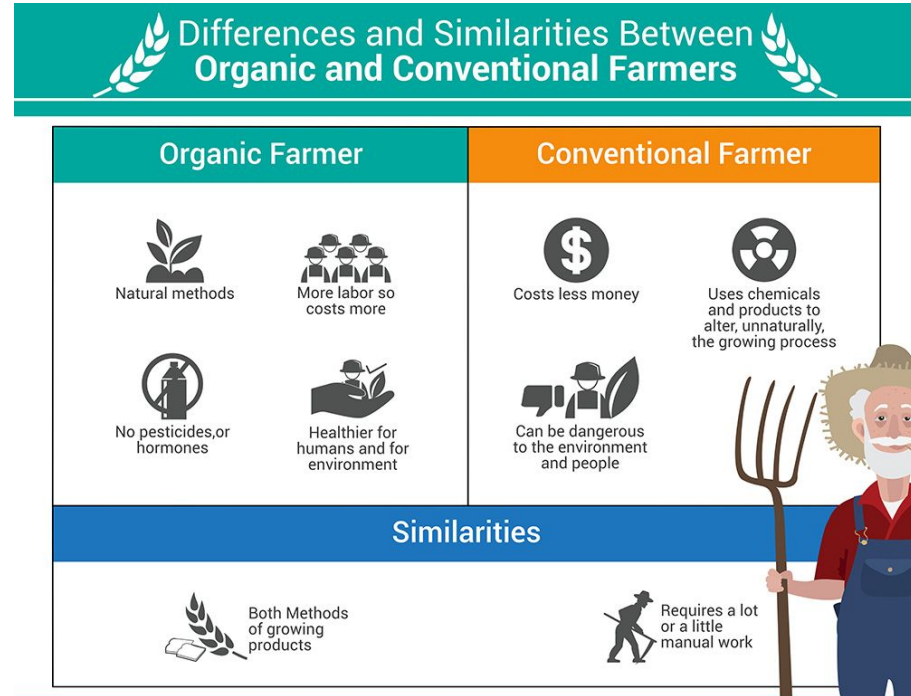

b. Discuss with your counselor the ways individuals, families, and communities can create their own food sources (potted plants, family garden, rooftop garden, neighborhood/community garden). Tell how this plan might contribute to a more sustainable way of life if practiced globally.

Requirement 2: Food

★ Conventional Farming is unsustainable

- Monoculture
- No crop rotation
- Habitat loss
- Water use
- Over-fertilizing
- Over-pesticide use
- Destruction of soil
- Feedlots: environmental hazard

Requirement 2: Food

“Think Globally, Act Locally”

Sustainable gardening: a garden that be used productively over and over without the need for excessive restarting costs and without damaging the environment.

- ★ Garden pots
- ★ Backyard vegetable garden
- ★ Fruit trees at your home
- ★ Raise chickens for eggs
- ★ Community gardens
- ★ Rooftop gardens
- ★ Organic gardens

Requirement 2: Food

c. Discuss with your counselor factors that limit the availability of food and food production in different regions of the world. Tell 3 ways these factors influence the sustainability of worldwide food supplies.

Requirement 2: Food

- ★ 1960's most countries were self-sufficient
- ★ Now only 2 of 183 nations are major grain exporters: US and Canada
- ★ For most people, grain is a primary source of nutrition
- ★ Food security is access by all to sufficient food for an active, healthy life.
- ★ Factors that affect food security
 - Literacy rates
 - Levels of farmer education
 - Agricultural research and extension capacity
 - Transport infrastructure
 - Non-agricultural income opportunities
 - Social support systems
 - International security and confidence in international trade
 - Domestic civil strife
 - International capital movements

Requirement 2: Food

★ “Green Revolution”

- 1960’s Energy-intensive farming- unsustainable
- Heavy use of fossil fuels for fertilizer, pesticides, irrigation
- Led to soil erosion and contamination and water pollution, and sped up the depletion of groundwater and surface water resources
- Limited land suitable to agriculture

Requirement 2: Community

★ Sustainable community

- Economically, environmentally, and socially healthy and resilient
- Meets challenges through integrated solutions, not fragmented approaches that meet one goal at the expense of others
- It takes a long-term perspective
- Can walk to work/school, community focused
- Less pollution
- Natural habitat areas
- Fewer miles of roads/pipes
- <https://sustain.org/>

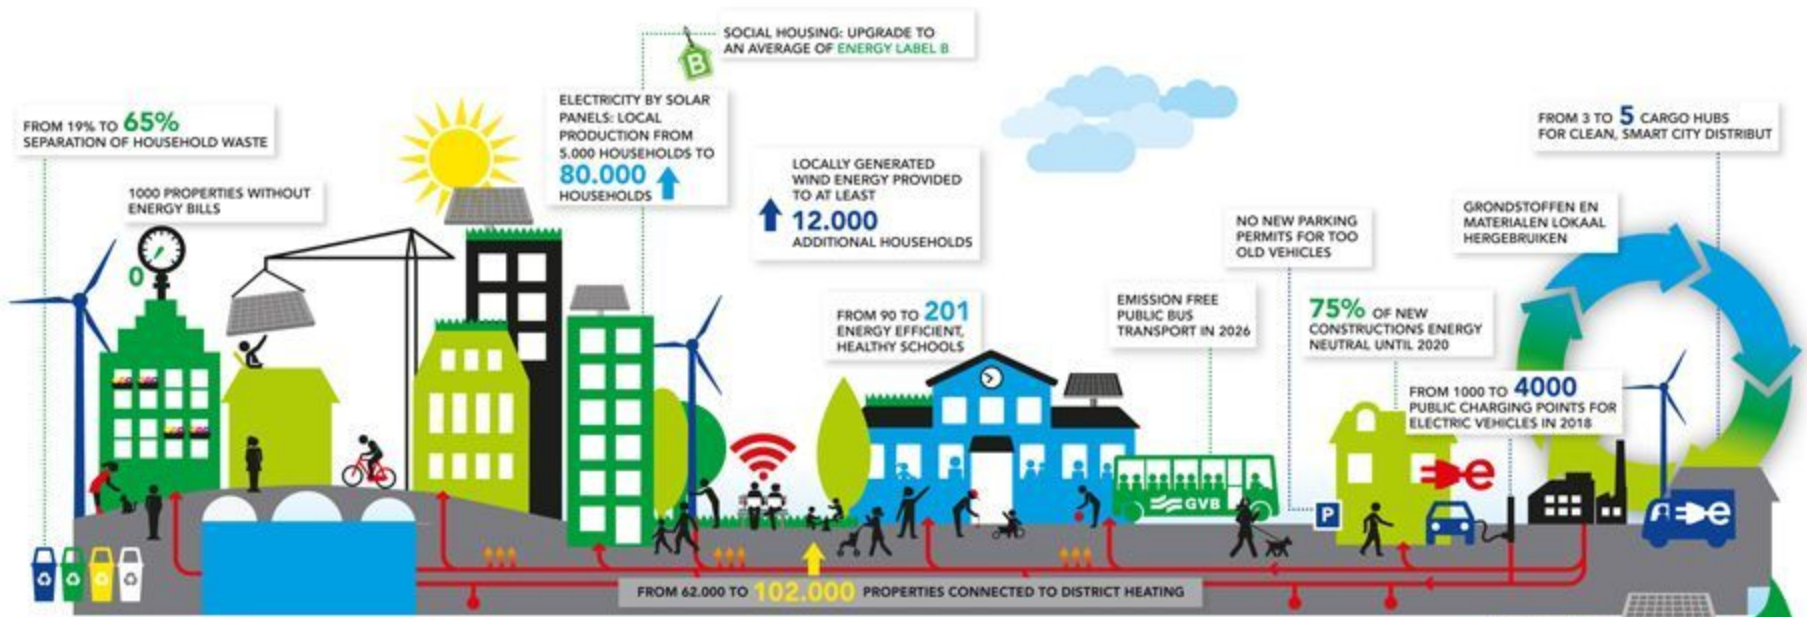

★ Cities consume 2/3rds of the world's energy and produce 70% of global CO2 emissions

- As urbanization increases with an expected 70% of the world's population to live in cities by 2050, it is essential to identify and implement green approaches to development

Requirement 2: Community

- a. Draw a rough sketch depicting how you would design a sustainable community. Share your sketch with your counselor, and explain how the housing, work locations, shops, schools, and transportation systems affect energy, pollution, natural resources, and the economy of the community.

AS MUCH TRAFFIC IN THE CITY AS POSSIBLE IS EMISSION FREE BY 2025

RENEWABLE ENERGY

IN 2020, 20% MORE LOCALLY PRODUCED RENEWABLE ENERGY PER INHABITANT, AND 20% ENERGY SAVED PER INHABITANT.

CLEAN & HEALTHY AIR

IN 2025, 30% REDUCTION OF CARBON AND 35% REDUCTION OF NITROGEN DIOXIDE THROUGH CLEAN AND SMART TRANSPORTATION.

CIRCULAR ECONOMY

WASTE IS A RESOURCE. RAW MATERIALS AND RESOURCES WILL BE MINED LOCALLY AND RE-USED. NEW FORMS OF DISTRIBUTION, CONSUMPTION AND DISTRIBUTION WILL ARISE.

CLIMATE RESILIENT CITY

CLIMATE CHANGE AS A KEY FACTOR BY THE DEVELOPMENT AND DESIGN OF THE CITY OF AMSTERDAM.

SUSTAINABLE CITY

AMSTERDAM ENVISAGES RAPIDLY IMPROVING SUSTAINABILITY WITHIN THE MUNICIPAL ORGANIZATION ITSELF.

Requirement 2: Community

- ★ <https://www.youtube.com/watch?v=fcDDUSUbg9A>
- ★ <https://www.youtube.com/watch?v=0GwINxSIMFs>
- ★ 6 sustainable cities
 - Copenhagen, Denmark
 - San Francisco, California, US
 - Vancouver, Canada
 - Stockholm, Sweden
 - Singapore
 - Reykjavik, Iceland

Requirement 2: Community

b. With your parent's permission and your counselor's approval, interview a local architect, engineer, contractor, or building material supplier. Find out the factors that are considered when using sustainable materials in renovating or building a home. Share what you learn with your counselor.

<https://www.slideshare.net/donaldsimon/Engineered-Wood-Sustainability-and-Green-Building-Practices>

What to know about LEED Certifications

Leadership in Energy and Environmental Design

What is LEED?

The LEED (Leadership in Energy and Environmental Design) certification program was developed by the U.S. Green Building Council (USGBC) and provides a standard for environmentally-conscious building codes to "create healthy, highly efficient, and cost-saving green buildings". It focuses on environmental components such as energy and water use, as well as internal air quality.

Why choose LEED standards?

LEED-certified buildings are more environmentally responsible, as they use less resources with less human impact on the environment, but also cost less to operate because of their high efficiency.

What kind of buildings can be certified?

There are LEED certification standards for every kind of building, including community and home projects.

How does a building meet LEED certification?

There are four LEED certification levels: Certified, Silver, Gold, and Platinum. Buildings are given their certification level from the number of points earned in several categories, including energy use, air quality and water quality.

Requirement 2: Community

Categories	Major Practices	Specific Benefits
Sustainable Site	<ul style="list-style-type: none"> • Sustainable site planning and landscaping • Solar orientation of building • Public transportation • Stormwater management 	<ul style="list-style-type: none"> • Reduce environmental impacts • Efficiency of site use • Heat island effect • Reduction of civil infrastructures
Energy Efficiency	<ul style="list-style-type: none"> • Solar orientation • High efficiency envelopes (efficient windows and high R-value insulation) • High efficiency HVAC system • Building automation systems • Daylighting and high efficiency lighting • Onsite renewable energy sources (photovoltaics) 	<ul style="list-style-type: none"> • Energy saving • Reduction in greenhouse gases • Lower operating costs
Water Efficiency	<ul style="list-style-type: none"> • Water saving fixtures and technologies • Rainwater harvesting system 	<ul style="list-style-type: none"> • Water saving • Lower operating costs
Materials & Resources	<ul style="list-style-type: none"> • Green supplies and materials • Construction waste management • Recycled content materials • Regional materials, locally sourced • Rapidly renewable materials 	<ul style="list-style-type: none"> • Resource saving • Reduce environmental impacts
Indoor Environment Quality	<ul style="list-style-type: none"> • Daylighting & high efficiency lighting • Adequate air filtration • Low VOC materials • Mold prevention • Enhanced acoustical performance 	<ul style="list-style-type: none"> • Productive and healthy indoor spaces • Provide optimal indoor environment to building users • Improved occupant health and wellbeing
Building Operation & Maintenance	<ul style="list-style-type: none"> • Green cleaning supplies • Indoor pest prevention and control • Waste reduction and recycling • Energy and water conservation • Green grounds keeping • Electronic versus paper communication • Guest education/communication program 	<ul style="list-style-type: none"> • Reduced environmental impacts • Reduced operational and maintenance costs
Demolition	<ul style="list-style-type: none"> • Exposed ceiling • Nylon 6 recycled carpet 	<ul style="list-style-type: none"> • Reduce construction waste

Requirement 2: Community

c. Review a current housing needs assessment for your town, city, county, or state. Discuss with your counselor how birth and death rates affect sufficient housing, and how a lack of housing - or too much housing- can influence sustainability of a local or global area.

Requirement 2: Community

- ★ Shelby County, TN
 - https://shelbycountyttn.gov/DocumentCenter/View/34339/Stategic-Plan-for-FY20-24--AP1-for-FY20_FINAL-Spanish-Version
- ★ Understanding of needs: special housing/senior housing/affordable homes
- ★ Identify issues: urban blight, foreclosure
- ★ Set priorities, resource identification, strategy development
- ★ Questions
 - Who can afford it? Can essential employees afford to live here?
 - Diversity and inclusion?
 - Can children remain in community as they start their own households? Promote job growth?
 - Special needs have adequate housing?
 - Housing trends: absent landlords, foreclosures, increasing house prices, decreasing home values, substandard/overcrowded/other undesirable living conditions?

Requirement 2: Energy

U.S. energy consumption by energy source, 2017

Total = 97.7 quadrillion
British thermal units (Btu)

Total = 11.0 quadrillion Btu

Note: Sum of components may not equal 100% because of independent rounding.
Source: U.S. Energy Information Administration, *Monthly Energy Review*, Table 1.3 and 10.1, April 2018, preliminary data

Requirement 2: Energy

- a. Learn about the sustainability of different energy sources, including fossil fuels, solar, wind, nuclear, hydropower, and geothermal. Find out how the production and consumption of each of these energy sources affects the environment and what the term “carbon footprint” means. Discuss what you learn with your counselor, and explain how you think your family can reduce its carbon footprint.

Requirement 2: Energy

★ Energies explained

- <https://www.youtube.com/watch?v=KEeH4EniM3E>

★ Fossil Fuels

- Petroleum, coal, natural gas comes from the remains of ancient plants/animals.
- Burning them releases CO₂ and other greenhouse gases, which are considered by many to be a primary cause of global climate change
- Dirty and non-renewable

★ Wind

- Conversion of wind energy into usable forms through windmills for mechanical power, wind pumps for water pumping and drainage, and wind turbines to make electrical power
- Renewable and clean and produces no greenhouse gas emissions
- But some find them unsightly or noisy

Requirement 2: Energy

★ Solar

- Received by Earth from the sun: solar radiation
- Renewable and clean

★ Nuclear

- Produced by a fission reaction that splits the uranium nucleus, creating heat
- Heat then used to turn water to steam, which drives a turbine, spinning a generator to produce electricity
- Carbon free
- Toxic waste created by used or depleted uranium is hard to dispose of safely

★ Hydropower

- Water power comes from the energy of falling/running water
- Used for operating textile mills, other mechanical devices, and generating electricity
- Renewable energy source

Requirement 2: Energy

★ Geothermal

- Heat of the Earth's core
- Hot spring water brought to Earth's surface and used to heat homes/buildings
- Clean, renewable electricity
- Sources mainly concentrated in the “Ring of Fire”, volcanic region with large reservoirs around the Pacific Ocean
- Cost effective, sustainable, though it does emit small quantities of greenhouse gases

★ Bioenergy

- Generated from biomass: trees, crops, algae, animal dung, plant material left over from agricultural or forestry operations
- Clean and renewable

★ Pros/Cons Alternative Energy Options

- <https://www.youtube.com/watch?v=sWfWPbL0Q-g>

Requirement 2: Energy

★ Carbon Footprint

- Total amount of CO2 that you create.
- The bigger the footprint, the less green your lifestyle is
- Electricity in your home creates the biggest part of your footprint
 - Thermostat adjustments and type of fuel makes a difference in CO2 produced
- Transportation also produces CO2
- Household garbage also contributes

★ <https://www.nature.org/en-us/get-involved/how-to-help/carbon-footprint-calculator/>

Carbon Footprint

Causes

- Population growth and increase in consumption levels
- Increase in living standards
- Increase in energy consumption
- Deforestation
- Industrial processes
- Agriculture
- Vehicles
- Airplanes
- Ships
- Waste disposal
- Lobbying problem
- Lack of education

Effects

- Global warming
- Air pollution
- Acid rain
- Effects on humans
- Effects on animals
- Effects on plants
- Effects on aquatic life
- Effects on the whole environmental system

Requirement 2: Energy

★ Shrink your carbon footprint

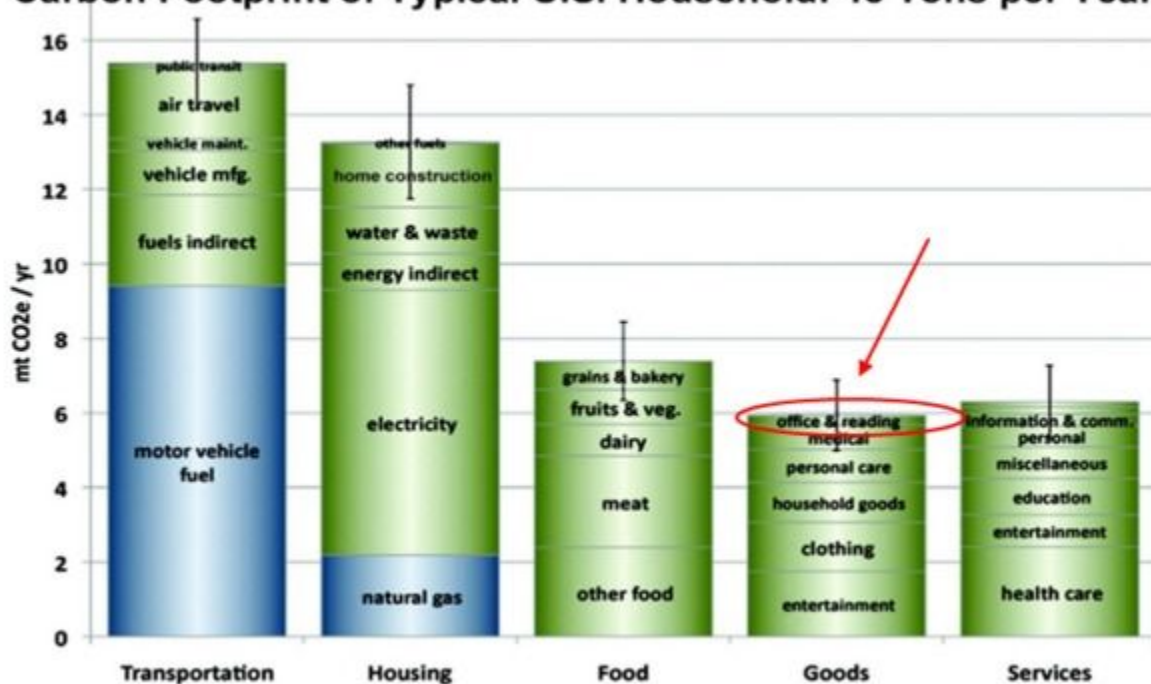

- Turn off computers, tvs, lights when not in use
- Unplug small appliances and chargers
- Lower temp to 68 in winter and raise temp to 78 in summer
- Buy local and buy organic
- Keep packaging to a minimum
- Don't buy bottled water
- Increase home efficiency
 - Insulated attic, closed windows, maintained HVAC, switch from incandescent to compact fluorescent or LED light bulbs, use ceiling fans, air dry laundry
- Switch to native plants- landscaping, xeriscaping
- Be **thrifty**

Requirement 2: Energy

★ Shrink your carbon footprint

- Choose fresh over frozen
- Use cold water to wash clothes
- Combine errands to save trips in the car
- Three R's
 - Recycle, Reuse, Reduce
- Upcycle
- Keep your car as long as it runs well
- Use eco-friendly forms of transport: buses, light rail, bicycle, walk, or carpool
- Use right grade of gasoline, make sure gas cap is on tight
- Drive with window down when it is nice
- Don't idle

Carbon Footprint of Typical U.S. Household: 48 Tons per Year

Requirement 2: Energy

b. Develop and implement a plan to reduce the consumption of one of your family's household utilities that consumes energy, such as gas appliances, electricity, heating systems, or cooling systems. Examine your family's bills for that utility reflecting usage for 3 months (past or current). As a family, choose 3 ways to help reduce consumption and be a better steward of this resource. Implement those ideas for one month. Share what you learn with your counselor, and tell how your plan affected your family's usage.

Requirement 2: Energy

c. Evaluate your family's fuel and transportation usage. Review your family's transportation-related bills (gas, diesel, electric, public transportation, etc.) reflecting usage for 3 months (past or current). As a family, choose 3 ways to help reduce consumption and be a better steward of this resource. Implement those ideas for one month. Share what you learn with your counselor, and tell how your plan affected your family's transportation habits.

Requirement 2: Stuff

WE BUY THINGS WE DON'T NEED
WITH MONEY WE DON'T HAVE
TO IMPRESS PEOPLE WE DON'T LIKE.

Requirement 2: Stuff

Unsustainable: Linear Model

Requirement 2: Stuff

“Cradle to Cradle”

Requirement 2: Stuff

- ★ Buy durable, long-lasting things rather than cheaper, poorly made things
- ★ Repair things that break instead of replacing them
- ★ Use reusable (cotton hand towel) instead of disposable (paper towel)
- ★ Don't take things you don't need (extra paper napkins at a restaurant)
- ★ Buy in bulk to reduce packaging
- ★ Consider life cycle of products (recyclable vs non-recyclable)
- ★ Sparking Joy/Minimalism/Purge
 - <https://www.youtube.com/watch?v=PczdGSHDppU>
- ★ The Story of Stuff
 - <https://www.youtube.com/watch?v=9GorqroiqgM#action=share>

Requirement 2: Stuff

★ Donating

- Thrift store
- Non-profit
- Consignment
- Online

★ Repurpose

★ Recycle

- Hazardous waste, appliances, electronics
- Scrap metal, paper

Requirement 2: Stuff

- a. Keep a log of the “stuff” your family purchases (excluding food items) for 2 weeks. In your log, categorize each purchase as an essential need (such as soap) or a desirable want (such as a DVD). Share what you learn with your counselor.

Requirement 2: Stuff

b. Plan a project that involves the participation of your family to identify the “stuff” your family no longer needs. Complete your project by donating, repurposing, or recycling these items.

Requirement 2: Stuff

c. Discuss with your counselor how having too much “stuff” affects you, your family, and your community. Include the following: the financial impact, time spent, maintenance, health, storage, and waste. Include in your discussion the practices that can be used to avoid accumulating too much “stuff”.

Requirement 3

- ★ How planetary life-support systems (soil, climate, freshwater, atmospheric, nutrient, oceanic, ecosystems, and species) support life on Earth and interact with one another
- ★ How the harvesting or production of raw materials (by extraction or recycling), along with the distribution of the resulting products, consumption, and disposal/repurposing, influences current and future sustainability thinking and planning

Requirement 3

Requirement 3

★ Interconnected Systems

- <https://www.youtube.com/watch?v=beidaN3SNdA&t=1m46s>

★ “A life support system...furthers the life of the biosphere in a sustainable fashion. The fundamental attribute of life support systems is that together they provide all of the sustainable needs required for continuance of life. These needs go far beyond biological requirements. Life support systems encompass natural environmental systems as well as...social systems required to foster societal harmony, safety, nutrition, medical care, economic standards, and the development of new technology. The one common thread in all of these systems is that they operate in partnership with the conservation of global natural resources.”

Requirement 3

Ecosystems, Food Chains & Food Webs

Energy Roles

Energy enters an ecosystem as sunlight and is turned into food by plants. The energy is transferred to organisms that eat producers and transferred again when organisms eat consumers.

Producers are green plants that produce their own food using energy from sunlight in a process called photosynthesis.

Consumers are animals that cannot make their own food. They get their energy from plants, other animals or both.

Decomposers such as bacteria and fungi break down decaying matter for food.

Biomes

A large ecosystem of plants and animals in a region with a certain type of climate is called a **biome**.

Food Web

A **food web** is an interconnected series of different food chains that describe the feeding relationships between species within an ecosystem.

Food Chain

A **food chain** is a model that shows how energy is passed from one organism to another.

Requirement 3

Requirement 3

Requirement 3

THE EARTH'S LIFE SUPPORT SYSTEMS

- The biosphere consists of several physical layers that contain:
 - Air
 - Water
 - Soil
 - Minerals
 - Life

Requirement 3: Use of Raw Materials

★ Pros

- Create Jobs, Economic Growth
- Harvesting at the right time, replanting for the future, restoring the land creates sustainability
- Fair Trade policies to protect the quality of life
- Certification standards to ensure material sustainability

★ Cons

- Affect people's health
- Disrupt/ displace communities
- Conflict/violence
- Corruption
- Wealth inequality
- Gender discrimination
- Cause environmental damage
 - Deforestation
 - Water scarcity
 - Air/Water/Soil pollution
 - Problems with waste disposal

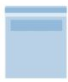

Requirement 4: Plastic Waste

- ★ Discuss the impact plastic waste has on the environment (land, water, air). Learn about the number of system for plastic recyclables, and determine which plastics are more commonly recycled. Find out what the trash vortex is and how it was formed.

Requirement 4: Plastic Waste

Plastic Waste

Plastic	Packaging types	Recycling number and examples
Polyethylene terephthalate: PET	Water and soft drink bottles, salad domes, biscuit trays, salad dressing and peanut butter containers	  
High-density polyethylene: HDPE	Milk bottles, freezer bags, dip tubs, crinkly shopping bags, ice cream containers, juice bottles, shampoo, Chemical and detergent bottles	  
Polyvinyl chloride: PVC	Cosmetic containers, commercial cling wrap	  
Low-density polyethylene: LDPE	Squeeze bottles, cling wrap, shrink wrap, rubbish bags	  
Polypropylene: PP	Microwave dishes, ice cream tubs, potato chip bags, and dip tubs	 
Polystyrene: PS	Cd cases, water station cups, plastic cutlery, imitation 'crystal glassware', video cases	  
Expanded polystyrene: EPS	Foamed polystyrene hot drink cups, hamburger take-away clamshells, foamed meat trays, protective packaging for fragile items	  
Mixed	Water cooler bottles, flexible films, multi-material packaging	  

Most commonly recycled and considered the safest plastic

Plastic Waste: Trash Vortex

★ <https://www.nationalgeographic.org/encyclopedia/great-pacific-garbage-patch/>

★ <https://science.howstuffworks.com/environmental/conservation/issues/great-pacific-garbage-patch-explained.htm>

ARCTIC OCEAN

These patches also contain chemical sludge and other debris and the plastic can absorb organic pollutants from the seawater. Fish and birds eventually eat the plastic once it has broken down to small enough pieces, which humans then eat.

In many of the sampled areas plastic concentration was **7 times higher** than that of zooplankton (algae).

The patch mostly consists of pelagic plastics, formed from plastic bags, plastic water bottles, bottle caps and styrofoam. **Plastic do not biodegrade**, the sun breaks these down into smaller and smaller pieces through photodegradation, which is why it is so difficult to judge the size of the patches, since these pieces are not visible from satellites or planes.

The plastic floatam collects in the first 10 meters of the water column.

GYRE CURRENT

An estimated 70% of this garbage sinks to the ocean floor.

Debris ranges in size from abandoned fishing nets to micro-pellets found in abrasive cleaners. Garbage from Asia's east coast takes about a year or less to enter the Pacific gyre, while trash from the west coast of North America can take up to 6 years.

10 percent of the world's annual 200 billion pounds of plastic produced winds up in the ocean.

The size of the patch is unknown and estimated to be anywhere from 0.41% to 8.1% of the size of the Pacific Ocean. Most scientists estimate it to be **twice the size of Texas**.

NORTH ATLANTIC GYRE

Cleanup of the patch is difficult due to the size of these patches and that the areas of high concentration are constantly shifting, along with prohibitive operating costs, and that **no nation will take responsibility** for it.

Water skater insects (Halobates Sericeus) lay their eggs on bird feathers, pumice and seashells and both insect and egg are important to the marine food chain. The accumulating microplastic has caused them to alter their mating habits and are now laying their eggs on the floating plastic carrying them out of their natural ecosystem.

NORTH PACIFIC GYRE

SUBTROPICAL CONVERGENCE ZONE

The wind-driven, swirling current of the North Pacific Gyre gathers marine pollution, slowly moving it towards the center of the region and trapping it.

ATLANTIC OCEAN

It is estimated that 80% of the plastics in the garbage patch come from land-based sources (rivers and sewer systems emptying into the sea) and the other 20% from ship and ocean sources, (cruise ships, fishing vessels).

20%

A typical 3,000 passenger cruise ship produces over **8 tons of solid waste** a week, much of which ends up in the ocean.

80%

SOUTH ATLANTIC GYRE

INDIAN OCEAN

INDIAN OCEAN GYRE

SOUTH PACIFIC GYRE

There are actually 5 main gyres in the world's oceans. A gyre is where currents of the oceans meet and form a whirlpool system. Most of the debris in the ocean winds up in one of these.

90% of the garbage floating in the Earth's oceans is plastic. **Less than 5%** of all plastic is recycled.

ESTIMATED DECOMPOSITION RATES

- Cardboard Box 2 Months
- Cigarette Butt 1-5 Years
- Plastic Grocery Bag 10-20 Years
- Styrofoam Cup 50 Years
- Foam Buoy 50 Years
- Tin Can 50 Years
- Aluminum Can 200 Years
- 6 Pack Rings 400 Years
- Plastic Bottle 450 Years
- Fishing Line 600 Years
- Glass Bottle Unknown

OPERATION SEANET

THE GREAT PACIFIC GARBAGE PATCH

PLASTIC RECOVERY SYSTEM

Requirement 4: Electronic Waste

- ★ On average Americans own 24 electronic gadgets per household
- ★ Contaminants: lead, cadmium, beryllium
 - They can leak into landfills or enter the air from incinerators
- ★ Metals: gold, silver, platinum, palladium, copper, tin, zinc
 - Used in jewelry, plating, electronics, automotive, art
- ★ Plastic
 - Used in electronics and plastic products: lawn furniture, non food containers, license plate frames, auto parts
- ★ Battery
 - Recycled into other rechargeable battery products

Requirement 4: Electronic Waste

- ★ Electronics make up 1-2% of all solid waste
 - Takes a lot of energy and resources to make, so it is better to recycle as much as possible
- ★ 20 million people in 20 countries collecting waste send e-waste to national recycling systems to divert BILLIONS of units of waste and create > 1,500 products to be sold
- ★ <https://www.youtube.com/watch?v=FmJFVmtWf-I>
- ★ <https://www.youtube.com/watch?v=Czu3BC7SrFQ>
- ★ <https://www.youtube.com/watch?v=fyuxWDkLdcl>

Requirement 4: Electronic Waste

- ★ Choose 3 electronic devices in your household. Find out the average lifespan of each, what happens to these devices once they pass their useful life, and whether they can be recycled in whole or part. Discuss the impact of electronic waste on the environment.

Requirement 4: Food Waste

- ★ Learn about the value of composting and how to start a compost pile. Start a compost pile appropriate to your living situation. Tell what can be done with the compost when it is ready for use.

Requirement 4: Food Waste

- ★ Composting at home
 - <https://www.epa.gov/recycle/composting-home#basics>
- ★ Vermicomposting: Worm Bin
 - <https://makezine.com/projects/make-your-own-worm-bin/>
- ★ Compost Fairy
 - <https://compostfairy.com/>

Requirement 4: Food Waste

★ I'll take Compostables for \$500, Alex

- Table scraps
- Fruit and vegetable scraps
- Eggshells
- Leaves
- Grass clippings
- Garden plants
- Flowers
- Lawn and garden weeds
- Shrub prunings
- Hay
- Pine needles
- Chicken manure

★ I'll take Compostables for \$500, Alex

- Coffee grounds and filters
- Tea leaves
- Newspaper
- Shredded paper
- Shredded cardboard
- Corn cobs
- Dryer lint
- Sawdust pellets
- Wood chips
- Seaweed
- Wood ash

Requirement 4: Species Decline

- ★ Explain the term species decline (animal or plant). Discuss the human activities that contribute to species decline, what can be done to help reverse the decline, and its impact on a sustainable environment.

Requirement 4: Species Decline

- ★ Loss of habitat or living space.
- ★ Loss of biodiversity

Wildlife Populations Worldwide Have Plummeted

Threats to wildlife and population decline from 1970-2010

Species population decline from 1970-2010

@StatistaCharts

Requirement 4: Species Decline

Biodiversity plan Five priorities

With this plan, France is taking action alongside local government, NGOs, socio-economic stakeholders and citizens, with a shared goal: preserving biodiversity.

Limiting the consumption of space and preserving environments

Protecting ecosystems and certain emblematic and endangered species

Preserving the sea and coastal areas

Taking into account the link between health and the environment

Fostering the transition of our production and consumption models

Requirement 4: Species Decline

BIODIVERSITY MATTERS

SPRING

LOOK OUT FOR INVASIVE PLANTS
They compete with our native wildflowers and can be a danger to human health.

- Start treating invasive weeds such as Himalayan balsam in the spring when the plants are actively growing but before they flower and set seed.
- Don't touch giant hogweed without full PPE – the plant's sap will burn the skin.

LOOK OUT FOR DISEASES AND PESTS

- Check trees for signs of pests and diseases including Ash dieback, Asian longhorn beetle and the Oriental Chestnut gall wasp.
- Some pests are notifiable and must be reported to the Forestry Commission – this includes the Oak processionary moth.
- Tell your supervisor if you see signs of a pest or disease.

TAKE CARE IN AREAS WHERE BIRDS MAY BE NESTING
Hedgerows and scrub are ideal habitats for nesting birds

- The bird nesting season starts in the spring (March – July).
- Never disturb a nesting bird, its eggs or young – this is against the law.
- Avoid cutting hedgerows between March and July.

DON'T DISTURB A SLEEPING ANIMAL
Always check for hedgehogs and other wildlife before starting work. Be aware of possible hibernation spots and be careful around them.

LEAVE PONDS ALONE
Don't work on a pond during the winter – you may disturb wildlife, including hibernating amphibians.

GIVE BIRDS A HELPING HAND
Put up nest boxes in the winter when birds will be looking for new nesting sites.

WINTER BERRIES
Avoid cutting a hedgerow until the berries have gone over – berries help birds get through the winter.

WOODLAND MANAGEMENT
Do coppice in the winter – coppicing benefits wildlife and regenerates growth for the New Year.

PLAN FOR WILDLIFE
Identify where you could create a wildlife feature, such as a loggery or wildflower meadow, in the year ahead.

Winter is a difficult time of year for wildlife - food is scarce and temperatures extreme

SUMMER

WINTER

The peak months for biodiversity - many fledglings will be leaving the nest and wildflower meadows are thriving

LOOK OUT FOR BATS
Bat activity peaks in the summer months. Don't damage or destroy a bat roost – this is against the law, even if bats are not present at the time.

LOOK OUT FOR REPTILES
Watch for reptiles when strimming and mowing – reptiles are active at this time of year and often bask in warm/exposed spots.

WATCH THE WATER

- Aquatic weeds like floating pennywort can quickly take over a waterway – regular cutting can help to keep the weeds under control.
- Blue-green algae can appear in lakes and ponds in the summer and is highly toxic – report any sightings to your supervisor.

STOP THE SPREAD OF INVASIVE PLANTS
Dispose of invasive plant waste using a licenced contractor. It is against the law to allow invasive species to spread.

PLAN POND MANAGEMENT
Manage ponds in the autumn months – late September/October is best.

LET THE GRASS GROW
Don't cut vegetation if you don't have to – long vegetation gives wildlife a place to shelter over the winter.

DON'T DISTURB GRASS SNAKES
Grass snakes often hibernate in compost heaps, or under piles of vegetation. Check an area thoroughly before starting work.

FEED THE BIRDS
Leave some seed heads for wildlife – seeds provide food for small birds through the colder months.

HIBERNATION HOT SPOTS
Look out for bats – they will be searching for hibernation roosts about now. Old trees and buildings are perfect sites.

Many species are now preparing for the winter months - stocking up on food and looking for a place to shelter

AUTUMN

Requirement 4: World Population

- ★ Learn how the world's population affects the sustainability of Earth. Discuss 3 human activities that contribute to putting Earth at risk, now and in the future.
- ★ Increasing world population puts a strain on biodiversity and amount of natural resources: plants and animals

Requirement 4: World Population

Population by region, in billions

Note: Data labels show projected peak population for each region: Europe (2021), Asia (2055) and Latin America and the Caribbean (2058). Regions follow United Nations definitions and may differ from other Pew Research Center reports.

Requirement 4: World Population

Humans & The Extinction Crisis

Data source: Scott, J.M. 2008. *Threats to Biological Diversity: Global, Continental, Local*. U.S. Geological Survey, Idaho Cooperative Fish and Wildlife, Research Unit, University Of Idaho.

Requirement 4: World Population

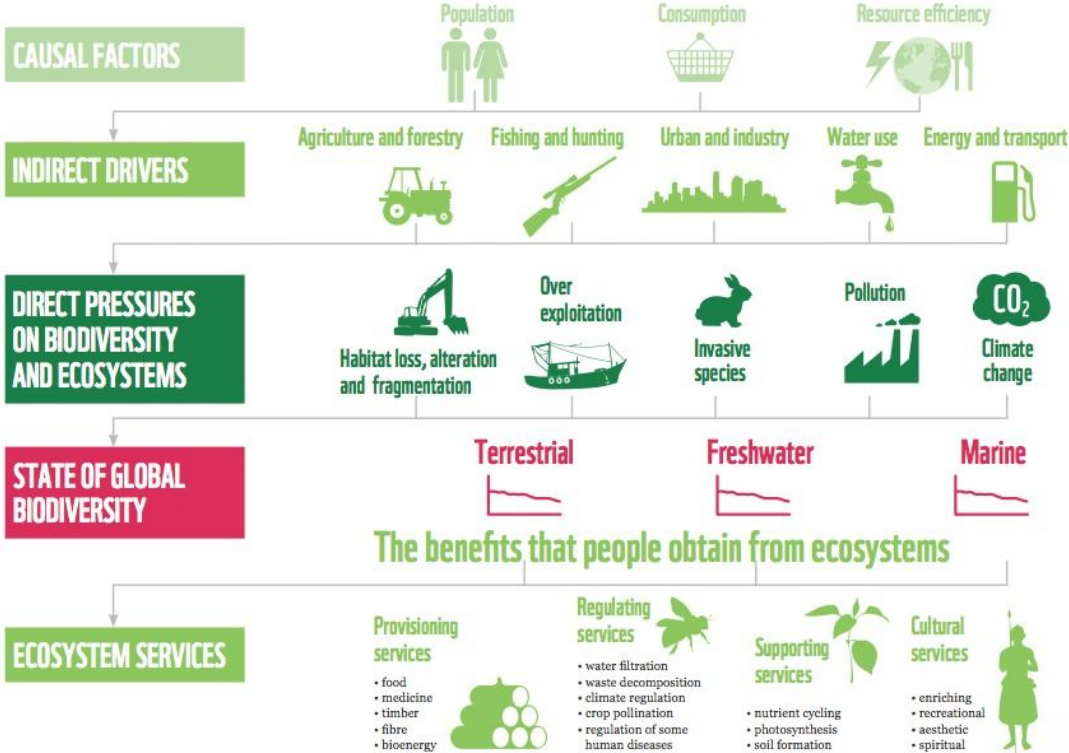

CONSUMPTION OF EARTH'S RESOURCES:

Number of Earths needed if everyone used renewable resources at the same rate as these individual countries.

Source: Global Footprint Network, 2018

Requirement 4: World Population

Requirement 4: Climate Change

- ★ Find a world map that shows the pattern of temperature change for a period of at least 100 years. Share this map with your counselor, and discuss 3 factors that scientists believe affect the global weather and temperature. Discuss with your counselor 3 impacts of climate change and how these changes could impact sustainability of food, water, or other resources.

Requirement 4: Climate Change

Global temperature trends from 1901 to 2017

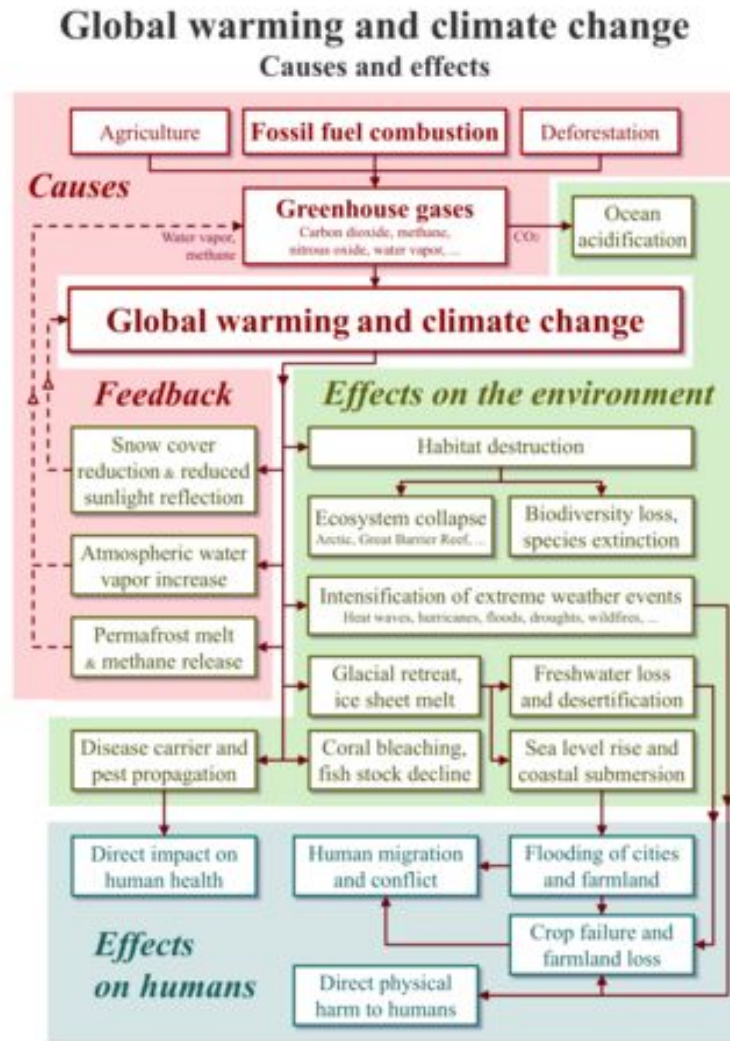

Global temperature trends from 1988 to 2017

NOAA Climate.gov
Data: NCEI

Requirement 4: Climate Change

Requirement 4: Climate Change

Requirement 4: Climate Change

Requirement 5a

★ Have a family meeting

- Discuss what your family learned about what it means to be a sustainable citizen
- Talk about the behavioral changes and life choices your family can make to live more sustainably
- Share with your counselor

Requirement 5b

- ★ Scouting principles that promote sustainability
 - Be **thrifty** and **resourceful** in the use of resources
 - Apply **outdoor ethics** and **leave no trace**
 - Be **good stewards** of human and natural communities for future generations
 - Demonstrate **brave leadership** by measuring our efforts and improving upon them
- ★ What do you all think?

Requirement 5b

- ★ **Trustworthy:** Sustainability starts with you, and helps you stand out as a young leader. You can help by recycling, and advocating green solutions to everyday issues.
- ★ **Loyal:** Demonstrate sustainability by being the voice of reason and reminding others we all share limited resources.
- ★ **Helpful:** You can make a difference in your family and in your community- and help our world - by using only what you need. Take time to share with others what you are doing.
- ★ **Friendly:** Volunteer in your community at a community garden, recycling center, or other sustainable activity and encourage others to do the same. This can be a fun and exciting way to see firsthand how, when we all are working together, we can make a difference.

Requirement 5b

- ★ **Courteous:** Always thank people for their help and understanding because we all benefit from sustainability and thinking about how our actions, no matter how small, affect others.
- ★ **Kind:** Treat this world with respect, save valuable resources and set an example for others to follow. Take time to smile; it does make a difference.
- ★ **Obedient:** To protect the world's resources you need to be true to yourself and believe in sustainability
- ★ **Cheerful:** Tell your stories of sustainability activities and projects with a smile, know you are making a difference, and others just might take action based on how you tell your story.

Requirement 5b

- ★ **Thrifty:** Track your savings at home or in your troop on solid sustainability actions.
- ★ **Brave:** You can be a leader at home or in your community when taking the appropriate actions. Stand up for what is right; start with your actions so you and your family can lead others to engage in sustainable living.
- ★ **Clean:** Respect our world and the valuable resources we are consuming every day. You can always help by understanding what is really needed and talking with others to protect the air we breathe and water we drink.
- ★ **Reverent:** Always consider other points of view and be true to Earth, as we all live here together.

Requirement 6: Careers

- ★ Agroforester
- ★ Air Quality Forecaster
- ★ Aquarist
- ★ Aquatic Biologist
- ★ Biofuel Production Operator
- ★ Chemical Engineer
- ★ Climate Change Analyst
- ★ Director of Sustainability
- ★ Ecotourism Guide
- ★ Energy Manager
- ★ Environmental Public Relations Specialist
- ★ Forestry
- ★ Geophysical Engineer
- ★ Geoscientist
- ★ Hydrographic Surveyor
- ★ Landscape Architect
- ★ Mathematicians
- ★ Nuclear Engineer
- ★ Petroleum Engineer
- ★ Petrologist
- ★ Soil Conservation Technician
- ★ Solar Engineer
- ★ Statistician
- ★ Sustainability Program Coordinator
- ★ Sustainability Specialist
- ★ Turf Scientist
- ★ Water Resource Engineer
- ★ Watershed Manager
- ★ Watershed Science Technician
- ★ Wetland Specialist
- ★ Wind Energy Engineer
- ★ Zoning Technician

Requirement 6

★ Urban Planning Engineer

- Education
 - Bachelor, Master, Doctorate
 - Urban, city, or regional planning
 - Usually program within another department: Architecture, Geography, Public Policy
 - Land use, environmental planning, housing, community development, economic development, historical development, urban design, transportation planning, geographic information systems
- Training
 - American Institute of Certified Planners (AICP) board exam
 - Internships and College Coursework
- Experience
 - Broad field of applicability

Requirement 6
