CONTENTS

NOTE FROM THE SERIES EDITOR	xi
FOREWORD	xiii
PREFACE	xv
ACKNOWLEDGMENTS	xvii
AUTHORS	xix
1 SYNTHETIC APERTURE RADAR (SAR) IMAGING BASICS	1
1.1 Basic Principles of Radar Imaging / 2	
1.2 Radar Resolution / 6	
1.3 Radar Equation / 10	
1.4 Real Aperture Radar / 11	
1.5 Synthetic Aperture Radar / 13	
1.6 Radar Image Artifacts and Noise / 16	
1.6.1 Range and Azimuth Ambiguities / 16	
1.6.2 Geometric Effects and Projections / 19	
1.6.3 Signal Fading and Speckle / 20	
1.7 Summary / 22	
References / 22	

2 BASIC PRINCIPLES OF SAR POLARIMETRY**23**

- 2.1 Polarization of Electromagnetic Waves / 23
- 2.2 Mathematical Representations of Scatterers / 27
- 2.3 Implementation of a Radar Polarimeter / 32
- 2.4 Polarization Response / 34
- 2.5 Optimum Polarizations / 53
 - 2.5.1 General (Bistatic) Case / 54
 - 2.5.2 Backscatter (Monostatic) Case / 56
 - 2.5.3 Special Case: Single Scatterer in Backscatter (Monostatic) Case / 58
 - 2.5.4 Special Case: Multiple Scatterers with Reflection Symmetry / 61
 - 2.5.5 A Numerical Example / 63
- 2.6 Contrast Enhancement / 65
 - 2.6.1 Numerical Example / 67
 - 2.6.2 Image Example / 69
- 2.7 Summary / 71
- References / 71

3 ADVANCED POLARIMETRIC CONCEPTS**73**

- 3.1 Vector-Matrix Duality of Scatterer Representation / 73
- 3.2 Eigenvalue- and Eigenvector-Based Polarimetric Parameters / 76
 - 3.2.1 Parameters Used to Describe Randomness in Scattering / 76
 - 3.2.2 Alpha Angle / 80
- 3.3 Decomposition of Polarimetric Scattering / 88
 - 3.3.1 Scattering Decomposition in the Incoherent Case Using Orthonormal Bases / 91
 - 3.3.2 Model-Based Scattering Decomposition in the Incoherent Case / 96
- 3.4 Image Classification / 125
 - 3.4.1 Supervised Classification / 128
 - 3.4.2 Physics-Based Unsupervised Classification / 132
 - 3.4.3 Combined Unsupervised and Bayes Classification Algorithms / 133
- 3.5 Polarimetric SAR Interferometry / 135
- 3.6 Summary / 141
- References / 141

4 POLARIMETRIC SAR CALIBRATION 145

- 4.1 Polarimetric Radar System Model / 145
- 4.2 Cross Talk Estimation and Removal / 152
- 4.3 Copolarized Channel Imbalance Calibration / 161
- 4.4 Absolute Radiometric Calibration / 166
 - 4.4.1 Effect of Topography on Scattering Area / 169
 - 4.4.2 Effect of Topography on Antenna Pattern Corrections / 174
 - 4.4.3 AIRSAR Image Example / 176
- 4.5 Faraday Rotation / 177
- 4.6 Summary / 179
- References / 180

5 APPLICATIONS: MEASUREMENT OF SURFACE SOIL MOISTURE 182

- 5.1 Surface Electrical and Geometrical Properties / 183
 - 5.1.1 Geometrical Properties / 183
 - 5.1.2 Electrical Properties / 188
 - 5.1.3 Penetration Depth / 191
 - 5.1.4 Soil Moisture Profile / 193
- 5.2 Scattering from Bare Rough Surfaces / 196
 - 5.2.1 First-Order Small-Perturbation Model / 199
 - 5.2.2 The Integral Equation Model / 199
- 5.3 Example Bare Surface Soil Moisture Inversion Models / 201
 - 5.3.1 The First-Order Small-Perturbation Model / 201
 - 5.3.2 Algorithm Proposed by Oh et al. (1992) / 205
 - 5.3.3 Algorithm Proposed by Dubois et al. / 207
 - 5.3.4 Algorithm Proposed by Shi et al. (1997) / 209
- 5.4 Comparison of the Performance of Bare Surface Inversion Models / 211
- 5.5 Parameterizing Scattering Models / 216
- 5.6 Inverting the IEM Model / 222
 - 5.6.1 Using a Data Cube / 223
- 5.7 Scattering from Vegetated Terrain / 225
 - 5.7.1 Scattering from the Vegetation Layer (Scattering Path 1) / 228
 - 5.7.2 Backscatter from the Underlying Ground Surface (Scattering Path 4) / 232
 - 5.7.3 Double-Reflection Scattering (Scattering Paths 2 and 3) / 233

5.8	Simulation Results / 239
5.8.1	Effect of the Angle of Incidence / 239
5.8.2	Effect of Cylinder Radius / 242
5.8.3	Effect of Cylinder Moisture / 243
5.8.4	Radar Vegetation Index / 244
5.8.5	Effect of Soil Moisture / 247
5.8.6	Inverting for Soil Moisture: the Data Cube / 250
5.9	Time Series Estimation of Soil Moisture / 252
5.10	Summary / 257
	References / 258

Appendixes

A	TILTED SMALL PERTURBATION MODEL DETAILS	262
B	BISTATIC SCATTERING MATRIX OF A CYLINDER WITH ARBITRARY ORIENTATION	267
C	NOMENCLATURE	276
	INDEX	279
