Introduction

VMware ESX Server is tested for compatibility with a variety of major guest operating systems running in virtual machines. Additionally, VMware ESX Server is tested for compatibility with currently shipping platforms from the major server manufacturers in pre-release testing. Our goal is to support a variety of storage and network adapters used as standard options for these platforms as they come to market.

If you are having a technical issue with 3rd party HW/SW and it is not found on this list, please refer to our 3rd Party HW/SW support policy at <http://www.vmware.com/support/policies/ThirdParty.html>.

This compatibility guide includes information about ESX Server 3.0 compatibility in the following sections:

- ["Servers"](#) on page 2
- ["VMotion Processor Compatibility Requirements"](#) on page 34
- ["Supported Guest Operating Systems"](#) on page 35
- ["Currently Qualified Hardware Lifecycle Management Applications"](#) on page 36

Servers

NOTE The minimum CPU clock speed recommended for ESX Server 3.0 has increased from that recommended for ESX Server 2.x.

Table 1. Recommended CPU Clock Speed

NOTE The Intel Xeon 5100, 5300 and 7100 series of processors, and the AMD 2000/8000 series of processors are not supported with any of the listed servers unless explicitly footnoted.

NOTE Many servers that are qualified with ESX Server 2.5 may not appear on the list for ESX Server 3.x. Several of these are still undergoing certification by VMware or its OEM partners. For specific questions regarding when a particular server is planned to be supported with ESX Server 3.x, please contact your server vendor.

VMware works closely with each of its OEMs to drive towards mutual support of ESX Server at the time of announcement. Due to different product release cycles, levels of testing, and OEM agreements, not all OEM devices will be supported at the general availability date of a new version of ESX Server.
