

# SMART TRACK PEDALBOARD

Take care of them with our new fastener system!

Patent Pending

# SMART TRACK PEDALBOARD

*Imagine you could add, remove or relocate your pedals in a quick, clean and easy way.*

This is exactly what the new Fastener attaching system of the Smart Track pedalboard offers. Keep your pedals intact from day one!

With its aluminium structure, Smart Track is a light and tough pedalboard which will be easy to carry around thanks to the soft-cases designed to fit each model. Its modular design is specially designed to adapt to any musician's needs.

Upper side wiring makes configuration changes immediate and its adjustable rear legs will allow you to adapt to uneven stages.

If for some reason you wish to go back to velcro you just have to flip the pedalboard over and that's it!

## PEDAL FASTENER SYSTEM

Quick, easy and clean

## EASY SET UP

Attach and configure pedals quickly

## MODULAR DESIGN

Expand or reduce according to user needs

## REVERSIBLE PEDALBOARD

Flip your pedalboard and turn it into Evo Track

## ADJUSTABLE LEGS

Greater stability

## LIGHT WEIGHT

Anodized aluminum structure

# FASTENER SYSTEM

The new fastener system will allow you to keep your pedals fixed and clean like the first day.

A system that will fix your pedals in a quick and easy way, allowing you to place and remove them as many times as necessary with only a screwdriver gesture. Made of plastic, they have been specially designed to adapt the vast majority of pedals in the market, easing any kind of setup.

# EVO TRACK PEDALBOARD

The modular pedalboard that is easy to resize!

Patent Pending

# EVO TRACK PEDALBOARD

*Imagine you could extend or reduce the pedalboard's size without the need of buying a new one.*

This is exactly what our new modular system for Evo Track proposes. An updated design of the classic Velcro® pedalboard!

With its anodized aluminum structure, Evo Track is a light and tough pedalboard which will be easy to carry around thanks to the soft cases designed to fit each model.

Upper side wiring makes configuration changes immediate without the need of flipping the pedalboard over, and its adjustable rear legs will allow you to adapt to uneven stages.

What if you get bored of Velcro® and want to go one step further? Flip the board over and transform it into a fastener pedalboard so you can keep your pedals intact as if they were new!

# 20:14 GUITAR

*A completely customizable guitar*

*Patent Pending*

## THE HISTORY

"In the summer of 2014 I began to draw the story of a guitar. A guitar that wished to be different in the experimental sense of the word. As I was defining the most important features it responded to me, full of personality that i wanted to be like a laboratory, with which musicians could test and research different sounds in a very simple manner,... and it flirtatiously added that it also wanted to change its appearance depending on the mood, place or the company.

Once its personality had been defined, I searched for a team with whom to develop the 20:14. The synergy within the team made possible, in just 3 months, to present the first prototype of the guitar during last NAMM 2015; modifications and necessary improvements to finish up its personality and character."

*Jordi Canivell, Aclam's CEO*

# 20:14 GUITAR

*Made of high quality woods with a finest guitar works, and high end technology!*

Created for restless musicians who want their sound to go a step further and like to experiment. The 20.14 is a guitar born to allow artists to do whatever they please, swapping, arranging and adjusting the components in an easy and quick way, with only a screwdriver.

With a sturdy vintage design, in homage to the great guitar creators of that awesome period, without forgetting that we live in a fully technological age; the 20.14 is a fusion between two distant epochs in time but close in space.

- P.U. cartridge designed to allow quick and easy pickup swapping.
- A ball joint, as a link between the neck and body, allows to modify the distance between the strings and the guitar's body, giving the possibility to experiment with different bridges and soundboards, which are easily interchangeable.
- Two tailpiece to choose from, one internal (Tele style) and an external one (Archtop style).
- Provided with 3 different circuits: magnetic, piezo and midi.

Designed as a hybrid approach between an acoustic and a solid body guitar, it brings the electric guitar sound closer to the one of an acoustic guitar. The combination of all these features open a vast range of creative sonic possibilities for guitarists to explore.

# FLOATING GUITAR SUPPORT

*Turn your guitar into a piece of art*

*Product Patented*

# FLOATING GUITAR SUPPORT

## ADJUSTABLE SUPPORT

Fits onto a wide variety of guitars

## EASY TO FIX & REMOVE

Always ready to play

## DIFFERENT MODELS

For electric & acoustic guitars

## STAND & WALL MOUNT

Different options to display

Floating Guitar is a support specially designed to preserve and highlight the guitar value thanks to its versatile and practical design, which will make your instrument be the focus of any scene, transforming it into a unique piece.

Invisible and light, any kind of guitar can be easily hanged thanks to its adjustable adaptors. The strap button or neck anchoring system eases the process of attaching and detaching the guitar from the support, making it always ready to be played.

Floating Guitar is the ideal solution to exhibit your guitar in any space. It offers several orientation options and can be placed either on the wall or on a floor stand. This flexibility allows covering the needs of guitarists, collectors or luthiers in a clean, restrained, tidy and elegant way.

Made of stainless steel and a special foam for delicate surfaces it is available for different models of acoustic, archtop or classical guitars as well as for Strato, LP, SG or ES335 type electric guitars.
