

Technical Cable Guide

A brand of the

Prysmian
Group

WARNING

Cables must be installed according to the requirements of AS/NZS 3000, the Wiring Rules and any supplementary requirements of appropriate local Electricity Authorities, by an Electrician who holds a valid licence, appropriate to the State, Territory or Country where installation is to take place.

The Wiring Rules are applied throughout Australia by means of State and Territory Acts and Regulations. In general these Acts and Regulations specify compliance with the Rules, however, because of local requirements, some variation to specific clauses may be called for by means of these Acts and Regulations.

Note: Current ratings data contained in the cable selection category of this guide are based on Australian/New Zealand Standards (AS/NZS 3008.1.1).

Welcome to the latest edition of the Technical Cable Guide.

Following the recent acquisition of Draka, the Prysmian Group is now the world's largest producer of power and telecommunication cables with 97 manufacturing plants, 17 Research & Development Centres, and around 22,000 employees.

A global solutions provider, Prysmian offers a wide range of integrated solutions, such as cable systems, system design and engineering, project management, installation and postsale services.

Prysmian focuses on continuous product innovation and on achieving a competitive edge by focusing on research and development. This is done through Prysmian's own research & development centres and by co-operating with universities, scientific institutions and our valued customers. Prysmian's world-wide organisation makes and delivers advanced technological solutions to customers anywhere in the world.

Prysmian is committed to providing all of the necessary technical, installation, safety and practical information that may be required by designers, installers and users of our products in a comprehensive hand book that can easily be used in the field.

Please accept this latest edition of the Technical Cable Guide with our compliments.

Prysmian Cables & Systems Australia Pty Ltd proudly manufactures in Australia and operates certified management systems compliant with the requirements of;

Green Star

Prysmian Cables are leaders in the manufacture of energy, data and telecommunications cables and supply businesses across Australia and around the world.

We're also proud to be Australia's largest manufacturer of Green Star Certified cables after recently receiving Green Star Certification for our work in minimising environmentally harmful materials in the built environment and reducing the

amount of these materials going into landfill and water systems.

A trusted Australian company whose products are manufactured to Australian standards and now have Green Star Certification; Prysmian is the one to connect with to ensure your success in today's environmentally-focused marketplace.

Low Smoke Zero Halogen

AFUMEX THE SAFE CHOICE

The most effective method of cabling to ensure maximum personnel safety and the security of valuable assets.

**Prysmian has 2.5mm & 4mm
2C&E Flat Low Smoke Zero Halogen
(LSOH) cable available**

Afumex™
The Safe Choice

Prysmian's 2C&E Flat Low Smoke Zero Halogen cable is:

- Australian Made
- In Stock (500m packs)

- PVC Free - Green Star compliant receive maximum points
- Lead Free
- Easy to Strip
- Compliant to level RHE-1 for reduced hazardous effects to AS/NZS 4507

Prysmian is a proud Australian Manufacturer, so proud that we've invested in the special Australian Made logo to let our customers know they're buying quality AUSTRALIAN MADE product that meet Australian standards for quality and safety.

This version of the Prysmian Group Technical Cable Guide makes reference to the most recent information available at the time of publication.

If you would like to be included on the mailing list for future updated versions, please complete the information below, remove this page from the book and post using a current stamp.

Yes, I would like to receive updated versions of the Technical Cable Guide as they become available:

VaSTEC

a cut above the rest

Cut to your exact requirements the new Vastec EMC cable from Prysmian is the ultimate solution in AC Variable Speed Drive applications. Providing optimum delivery of power with minimized interference, Vastec is perfectly suited to electromagnetic sensitive environments.

OTHER SPECIAL CABLES

The energy cables in previous sections of this Guide, represent the common cables required in general markets. Prysmian however, manufacture a wide range of cables for “special markets” with specific demands. This includes:

- Mining and Industrial Markets, where cables are generally elastomeric, and face tougher duties and higher safety requirements.
 - Reeling and Trailing Cables to AS/NZS 1802 (Underground Coal Mining).
 - Underground Feeder Cables to AS/NZS 1972, AS1026, AS/NZS1429.
 - Machine Cables to AS/NZS 1972.
 - Reeling and Trailing Cables to AS/NZS 2802.
 - Composite trailing cables with fibre optics.
 - Flat power and control cables.
 - Festoon cables.
- Marine Environments, where special materials have to be used to cope with hydraulic and saline conditions, and which are also required to perform exceptionally in case of fire (low smoke and toxic gas emission).
 - Cables to AS/NZS 4193, IEC 60092-353, 60092-354, 60332 and other international standards.
 - Cables for tough offshore oil and gas applications.
- Transport Industry, where cables are stressed from heat, vibration and exposure to oils.
- Defence Standards, where cables are required to many international specifications, and are installed in very tight conditions, and operate in environments of greater heat and vibration. Critical systems have to be heavily screened to cope with high requirements for electromagnetic radiation. Prysmian Cable & Systems is proud to have been the preferred supplier to the RAN's Anzac Frigates and Collins Submarine projects.

And many other special application cables. Catalogues are available to specifically cover some of these areas. However, if you have a special requirement which falls outside of these areas, please do not hesitate to contact the nearest Prysmian Cable & Systems office. New cables are designed every day, and can also be sourced from the large global resources of the Prysmian Cable & Systems office Group.

OM2 & OM3 fibre types also available for Riser and Breakout cables.

OPTICAL EXTERNAL LOOSE TUBE - SM@RTCORE®

SM@RTCORE® Range of external Loose Tube Cable

Cable description:

Featuring reduced diameter technology.

2 to 624 optical fibres in water blocked loose tubes, and solid polyethylene fillers (if needed), laid up around a Glass Reinforce Plastic (GRP) central strength member, Dry water blocked Interstices, taped, polyethylene overall sheath and integrally bonded nylon jacket. Blue Sheath.

Single Mode OS2 - SM@RTCORE®

Code	Description	OD mm	Mass kg/km	Min. Bend Radius Full Load mm	Max. Tensile Strength Install. kN	Operating Temp °C	Crush Resistance kN/100mm
F6SLTN	S/M 6 core Drycore Nylon	10.0	73	200	2.0	-10 to 70	2.0

F24SLTN	S/M 24 core Drycore Nylon	10.0	74	200	2.0	-10 to 70	2.0
F48SLTN	S/M 48 core Drycore Nylon	10.0	76	200	2.0	-10 to 70	2.0

Std. Pack Size: 2km & Cut to Size.

OPTICAL ADSS

ADSS - All Dielectric Self Supporting Aerial Optic Fibre Cable.

In order to determine your cable requirements, please supply the following data:

- Maximum Span (metres)
- Maximum Ice Load (mm)
- Maximum Wind Loading (km/hr)
- Every day sag (metres or %)

If Maximum Span only is supplied the following characteristics are assumed:

- 1% normal sag, maximum 100 km/hr wind speed and 5mm radial ice load

Metrosp@n® - 80 metre Span for Metropolitan Environments

80m Span - up to 60 fibres in water blocked loose tubes, dummy fillers (If needed), laid up around a Glass Reinforced Plastic (GRP) Central Strength Member, aramid yarns reinforced & polyethylene overall sheathed.

Code	Description	OD mm	Mass kg/km	Min. Bend Radius No Load mm	Min. Bend Radius Full Load mm	Max. Everyday Tension kN	Max. Working Tension kN	Operating Temp °C	Crush Resistance kN/100mm
F12SAD80	Singlemode 12 Core	10.8	80	300	400	0.8	4.2	-10° to +70°	2
F24SAD80	Singlemode 24 Core	10.8	80	300	400	0.8	4.2	-10° to +70°	2

Connect with Australia's leading manufacturer of Green Star Certified cables.

Prysmian Cables & Systems are leaders in the manufacture of energy, data and telecommunications cables and supply businesses across Australia and around the world.

We're also proud to be Australia's largest manufacturer of Green Star Certified cables after recently receiving Green Star Certification for our work in minimising environmentally harmful materials in the built environment and reducing the amount of these materials going into landfill and water systems.

A trusted Australian company whose products are manufactured to Australian standards and now have Green Star Certification, Prysmian is the one to connect with to ensure your success in today's environmentally-focused marketplace.

Cable Selection

Cable Selection

The following are some simplified procedures for cable selection. Refer to the Wiring Rules AS/NZS 3000 and AS/NZS 3008.1.1 for detailed information. The four main electrical criteria for cable selection are:

- a. Current rating.
- b. Voltage drop.
- c. Short-circuit capacity.
- d. Earth loop impedance.

Generally speaking, for:

- a. Short route length, current-carrying capacity requirement will dictate the cable size selection.
- b. Long route length, voltage drop or earth loop impedance requirement will dictate the cable size selection.
- c. The short-circuit capacity of a cable shall be such that all short-circuit current occurring at any point of a circuit shall not cause the cable conductor temperature to exceed the maximum permissible limit.

A) Current rating:

Current rating of a cable depends on:

- a. Installation method, eg., In air or ground, enclosed or unenclosed, etc.
- b. Installation environment, eg., ambient temperature, depth of laying, presence of other cables or circuits nearby, etc.
- c. Limiting temperatures of the cables for normal use, eg., PVC and XLPE insulated cables are 75°C and 90°C respectively.
- d. Type of overcurrent protective device used, appropriate derating factor:
 - 0.9 for fuses, e.g. AS/NZS 60269 series fuses, with $I_2 = 1.6 \times I_N$.Where: I_2 = conventional overcurrent fusing or tripping current.
 I_N = nominal current of the fuse or circuit breaker.
- e. Current in neutral conductor.

“4 core” shall mean 3 phase cores plus one neutral core. 4 core cables can have the same current rating as 3 core cables only if the neutral core is lightly loaded, i.e. less than 35% of the rated current of the phase conductor, and the harmonic content in the current is not significant, e.g. less than 15% for 3rd and 10% for 9th, 12th, etc, higher harmonics. For other situations, de-rating may be required in order to take the additional heating effect due to the neutral current into consideration.

Current ratings in this technical manual are based on AS/NZS 3008.1.1 with the following typical Australian installation conditions. If other installation conditions are necessary, refer to derating/rating factors in the General Information section or/and AS/NZS 3008.1.1 for appropriate derating/rating factors.

- Not exposed to direct sunlight unless otherwise specified
- Single circuit
- Solar radiation (for cables exposed to sun only) = 1000W/m²
- Ambient air temperature = 40°C
- Ambient soil temperature = 25°C
- Depth of laying* = 0.5m
- Soil thermal resistivity = 1.2°C.m/W
- Supply frequency = 50Hz

*Measured to (a) centre of cable or trefoil group of cables or
(b) centre of enclosure or trefoil group of enclosures

B) Voltage drop:

Wiring Rules in general stipulate a maximum voltage drop of 5% of the nominal voltage between the point of supply and any point in the installation when the conductors are carrying maximum demand. Voltage drops in this technical manual are based on:

- a. Maximum conductor temperatures of 75°C, 90°C and 110°C as indicated
- b. Load power factor to give maximum voltage drop
- c. Single core cables are in trefoil or flat formation and touching or spaced apart
- d. Supply frequency of 50Hz

Equation to determine minimum required cable size due to voltage drop

$$V_c = \frac{V_d \times 1000}{I \times L} \quad \text{millivolts/ampere metre}$$

Where: V_c Calculated maximum permissible voltage drop in millivolts/ampere metre
 V_d Maximum permissible voltage drop in volts
 I Current in Amperes
 L Route length in metres

Now select a cable such that V_c is equal to or less than the voltage drop value given in the relevant table, and check that it will carry the current.

C) Short-circuit capacity:

During a short-circuit, the conductor temperature will increase due to the heat energy produced. To satisfy this requirement, short-circuit permissible temperature limit of the conductor of cable must not be exceeded. This may require the time current curves of the short-circuit protective device to be checked against the cable damage curves.

D) Maximum earth loop impedance:

The earth loop impedance has to be low enough to allow sufficient current to flow in the fault loop to cause the protective device to operate and disconnect the supply within the specified time when a fault of negligible impedance occurs between an active and a protective earthing conductor. To accurately calculate the earth loop impedance is not easy and requires information of the HV supply system that may or may not be available. As the internal impedance of an earth loop may be expressed in terms of circuit length, a simplified method is listed below to provide a reasonably accurate calculation of the maximum route length to ensure correct operation of protective devices to provide protection against indirect contact:

$$L_{\max} = \frac{0.8U_0 \text{ SphSpe}}{I_a \rho(\text{Sph} + \text{Spe})}$$

Where:

L_{\max}	Maximum route length (m).
U_0	Nominal phase voltage (230V).
ρ	Resistivity at normal working temperature ($\Omega \cdot \text{mm}^2/\text{m}$). = 22.5×10^{-3} for copper. = 36×10^{-3} for aluminium.
I_a	(mean) trip current setting for the instantaneous operation of a circuit breaker (A) in the specified time; or the current that assures operation of the protective fuse (A); in the specified time.
Sph	Size of the active conductor (mm^2).
Spe	Size of the protective earthing conductor (mm^2).

Notes:

1. This method is only reliable where the conductors that make up the earth-fault-current loop are in close proximity to each other and are not separated by ferromagnetic materials.
2. This calculation method is considered valid for cable sizes up to 120mm². For larger sizes, maximum length and fault loop impedance should be calculated by other methods taking account of cable inductance.

Maximum Route Lengths, in metres, for different sizes of Conductors and Protective Devices using Mean Tripping Currents (I_a)* for a disconnection time of 0.4 sec.

Conductor Size mm ²		Protective Device Rating Amps	Circuit-breaker (see Note 1) m			Fuses (see Note 2) m
Active	Earth		Type B	Type C	Type D	
1	1	6	170	91	55	204
1	1	10	102	55	33	114
1.5	1.5	10	153	82	49	170
1.5	1.5	16	96	51	31	82
2.5	2.5	16	160	85	51	136
2.5	2.5	20	128	68	41	93
4	2.5	25	126	67	40	90
4	2.5	32	98	52	31	70
6	2.5	40	90	48	29	60
10	4	50	117	62	37	73
16	6	63	142	76	45	85
16	6	80	112	59	36	59
25	6	80	124	66	40	66
25	6	100	99	53	32	47
35	10	100	159	85	51	75
35	10	125	127	68	41	58
50	16	125	198	106	63	90
50	16	160	155	83	50	71
70	25	160	235	126	75	108
70	25	200	188	100	60	84

Notes:

- * I_a for circuit-breakers are mean tripping currents as follows:
Type B = 4 times rated current.
Type C = 7.5 times rated current.
Type D = 12.5 times rated current.
- Fuses based on AS/NZS 60269.1 also known as BS 88 type fuses.
- When the nominal phase voltage of the electrical installation is not 230V, the maximum length may be determined by multiplying by a factor of $U_0/230$. For a nominal phase voltage of 240V, the factor would be approximately 1.04.
- The above table is for guidance only. In many cases, other requirements such as loading, short circuit and voltage drop will need to be considered in the selection of active and earth conductor sizes.

Prysmian Solar Cable

Available
Now

PRYSMIAN PV1-F FLEXIBLE CABLES have it covered

- ✓ **Conductor** – Electrolytic tinned copper class 5 in accordance with IEC 60228 for better durability and better conductivity over the life of the PV unit
- ✓ **Electron-Beam Cross-Linked Material (Two-layer-Insulation)** – makes it both flexible and resistant to UV, no safety risk when needing to remove the PV panels for maintenance, due to old brittle cables. (Cables installed at rear of panels are still deemed to be exposed to UV due to reflection)
- ✓ **Fire Retardant, Halogen-free per IEC 60754-1 & Low Smoke Emission per IEC 61034** – safety first, no toxic PVC gases in the event of a fire
- ✓ **Environmentally Friendly** – complies with RoHS directives 2002/95/EG
- ✓ **Ambient Temperature from -40°C to +120°C for fixed flexible installation** – can be used in Australia and New Zealand's harshest environments
- ✓ **Ozone Resistant** per DIN EN 50396
- ✓ **UV-Resistant to ISO 4892-2 Standard** – will last the life of the UV panel. Note even where the cable is not directly exposed to Sunlight is still must comply with AS/NZS 5033:2012 if connected to the PV panel.
- ✓ **Acid and Alkaline Resistant** (N-Oxalic Acid, N-Sodium Hydroxide) per EN 60811-2-1
- ✓ **Abrasion Resistant** – Meets DIN EN 53516 – it's tough and unlikely to be damaged during installation or during maintenance of the panel
- ✓ **Easier installation** due to extraordinary flexibility and smaller outer diameter
- ✓ **Easy Strip** – Prysmian Cable Engineers have specially designed the solar cable to strip easily. Easy stripping improves speed of insulation and safety.

Application

The cable is designed and manufactured according to standard 2 Pfg 1169/08.2007 for use in solar plant distribution systems.

Specifications

- Insulation resistance: $\geq 10^{14} \Omega \cdot \text{cm}$ at 20°C
- UV resistant: >720h
- Certificate: TUV
- Colours available on request:
 - Red
 - Blue
- Sizes available:

- 4mm ² single	Prysmian Product Codes:
- 4mm ² twin	- 5749083
- 6mm ² single	- 5749045
- 6mm ² twin	- 5749090
- Other sizes made to order	- 5749069

Drum and length

- Drum: Black PVC drum
- Length: 100 metres per drum

12	0.63	0.74	0.80	

DERATING FACTORS MULTICORE ENCLOSED

Derating factors for groups of circuits of cables installed in underground wiring enclosures
 - Multicore cables enclosed separately or more than one Single Core cable per wiring enclosure.

Number Of Circuits	Derating factors			
	Touching	Distance (S), m		
		0.30	0.45	0.60
2	0.90	0.93	0.95	0.96
3	0.83	0.88	0.91	0.93
4	0.79	0.85	0.89	0.92
5	0.75	0.83	0.88	0.91
6	0.73	0.82	0.87	0.90
7	0.71	0.81	0.86	0.89
8	0.70	0.80	0.85	0.89
9	0.68	0.79	0.85	0.89
10	0.67	0.79	0.85	0.89
11	0.66	0.78	0.84	0.88
12	0.66	0.78	0.84	0.88

RATING FACTORS AIR/CONCRETE SLAB

Rating factors for variations in ambient temperature for cables in air or heated concrete slabs.

Conductor Temp °C	Rating Factor																
	Air Ambient Temperature (see Note 1), °C																
	15	20	25	30	35	40	45	50	55	60	65	70	75	80	85	90	100
110	1.16	1.13	1.10	1.07	1.04	1.0	0.96	0.93	0.89	0.85	0.80	0.76	0.71	0.65	0.60	0.53	0.38
90	1.26	1.20	1.15	1.10	1.05	1.0	0.94	0.88	0.81	0.73	0.65	0.57	0.47	0.34	0.19	-	-
80	1.31	1.25	1.19	1.12	1.06	1.0	0.92	0.84	0.76	0.66	0.56	0.45	0.27	-	-	-	-
75	1.35	1.28	1.21	1.14	1.07	1.0	0.91	0.82	0.72	0.60	0.49	0.37	-	-	-	-	-

Note:

- For heated concrete slabs, the ambient temperature shall be taken as the operating temperature of the slab.

RATING FACTORS BURIED

Rating factors for variations in soil ambient temperature for cables buried direct in ground or in underground wiring enclosures.

Conductor Temp °C	Rating Factor						
	Soil Ambient Temperature, °C						
	10	15	20	25	30	35	40
110	1.08	1.06	1.03	1.0	0.97	0.94	0.91
90	1.11	1.07	1.03	1.0	0.97	0.93	0.89
80	1.13	1.09	1.04	1.0	0.96	0.91	0.85
75	1.14	1.10	1.05	1.0	0.95	0.89	0.83

Rating factors for variations in depth of laying for cables buried direct in the ground - Single Core or Multicore.

Depth Of laying (see note 2) m	Rating Factor		
	Conductor size, mm ²		
	Up to 50	Above 50 up to 300	Above 300
0.5	1.00	1.00	1.00
0.6	0.99	0.98	0.97
0.8	0.97	0.96	0.94
1.0	0.95	0.94	0.92
1.25	0.94	0.92	0.90
1.5	0.93	0.91	0.89
1.75	0.92	0.89	0.87
2.0	0.91	0.88	0.86
2.5	0.90	0.87	0.85
3.0 or more	0.89	0.86	0.83

Note:

- The ambient temperature at the surface is to be taken at 40°C and not 25°C as at a depth of 0.5m. For depth less than 0.5m, see Table 2(3) of AS/NZS 3008.1.1.
- Measured to centre of enclosure of trefoil group of cables.

RATING FACTORS UNDERGROUND ENCLOSURES

Rating factors for variations in depth of laying for cables installed in underground wiring enclosures - Single Core or Multicore cables.

Depth Of Laying (see note 2) m	Rating Factor	
	Single Core*	Multicore
0.5	1.00	1.00
0.6	0.98	0.99
0.8	0.95	0.97
1.0	0.93	0.96
1.25	0.90	0.95
1.5	0.89	0.94
1.75	0.88	0.94
2.0	0.87	0.93
2.5	0.86	0.93
3.0 or more	0.85	0.92

*These rating factors apply to single-core cables enclosed separately, or grouped in a single wiring enclosure.

Note:

1. The ambient temperature at the surface is to be taken at 40°C and not 25°C as at a depth of 0.5m. For depth less than 0.5m, see Table 2(4) of AS/NZS 3008.1.1.
2. Measured to centre of enclosure of trefoil group of enclosures.

Rating factors for cables buried direct in ground and for cables installed in underground wiring enclosures where the thermal resistivity of the soil varies from 1.2°C.m/W.

Thermal Resistivity Of Soil °C.m/W	Rating Factor				
	Multicore Cable Buried Direct	Two Or Three Single-Core Cable Buried Direct	Multicore Cable In A Wiring Enclosure	Two Single-Core Cables In A Wiring Enclosure*	Three Single-Core Cables In A Wiring Enclosure*
0.8	1.09	1.16	1.03	1.06	1.08
0.9	1.07	1.11	1.02	1.04	1.06
1.0	1.04	1.07	1.02	1.03	1.04
1.2	1.00	1.00	1.00	1.00	1.00
1.5	0.92	0.90	0.95	0.94	0.92
2.0	0.81	0.80	0.88	0.86	0.83
2.5	0.74	0.72	0.83	0.80	0.77
3.0	0.69	0.66	0.78	0.75	0.71

*These rating factors apply to single-core cables enclosed separately, or grouped in a single wiring enclosure.

Cables In Conduits

Effective Cross Sectional Areas of PVC Cables

Appendix C6 of AS/NZS 3000.2007 gives comprehensive guidance on the number of cables installed in conduits. The basis to the calculation for the number of cables is:

The number of cables that can be installed in a circular conduit is determined from the ratios of the cross-sectional areas of the enclosure and the cable as follows:

$$\text{Number of cables} = \frac{\text{internal cross-sectional area of enclosure}}{\text{cross-sectional area of cable}} \times \text{space factor}$$

where the space factor recognises the reduction of space available from the circular geometry of the cables and enclosures:

For one cable in enclosure:	0.5
For two cables in enclosure:	0.33
For three or more cables in enclosure:	0.4

It is recommended that the installer refer to tables C9-C11 of AS/NZS 3000 for further guidance.

General Information

General Information

3 PHASE FORMULAE

Desired Data	Single-Phase	Three-Phase
I when kVA is known	$\frac{kVA \cdot 1000}{E_o}$	$\frac{kVA \cdot 1000}{\sqrt{3} \cdot E}$
I when kW is known	$\frac{kW \cdot 1000}{E_o \cdot pf}$	$\frac{kW \cdot 1000}{\sqrt{3} \cdot E \cdot pf}$
I when hp is known	$\frac{hp \cdot 746}{E_o \cdot \%Eff \cdot pf}$	$\frac{hp \cdot 746}{\sqrt{3} \cdot E \cdot \%Eff \cdot pf}$
kVA	$\frac{I \cdot E_o}{1000}$	$\frac{I \cdot E \cdot \sqrt{3}}{1000}$
kW	$\frac{I \cdot E_o \cdot pf}{1000}$	$\frac{I \cdot E \cdot \sqrt{3} \cdot pf}{1000}$
hp	$\frac{I \cdot E_o \cdot \%Eff \cdot pf}{746}$	$\frac{I \cdot E \cdot \sqrt{3} \cdot \%Eff \cdot pf}{746}$

Note:

The above table lists formulae commonly used for determining various parameters of an electrical system:

Where:	E_o =	Single phase voltage, in volts. Eg 230V.
	E =	Three phase line voltage, in volts. Eg 400V (E = $\sqrt{3}$ x E _o).
	I =	Current in amperes.
	%Eff =	Percent efficiency in decimals.
	pf =	Power factor in decimals.
	kVA =	Kilovolt-ampere.
	hp =	Horsepower (output).
	kW =	Kilowatts (input).
	Power Output =	Power input x %Eff.
	$\sqrt{3}$ =	1.732.

SINGLE PHASE MOTOR CURRENT

Power Output		Single Phase Voltage (V)				
kW	hp	110	220	230	240	250

120	13.3	12.0	10.5	8.83	7.92	6.95	17.2	11.3
150	16.7	15.0	13.1	11.0	9.90	8.69	21.5	14.2
185	20.5	18.5	16.2	13.6	12.2	10.7	26.5	17.5
240	26.6	24.0	21.0	17.7	15.8	13.9	34.3	22.7
300	33.3	30.0	26.3	22.1	19.8	17.4	42.9	28.4
400	39.5	34.2	28.3	26.1	22.6	18.7	57.2	37.8
500	49.4	42.8	35.4	32.6	28.3	23.4	71.5	47.3
630	62.2	53.9	44.6	41.1	35.7	29.5	90.1	59.5

Note:

- *Short-circuit capacities are based on maximum permissible temperature limits of: 160°C for PVC insulation with conductor up to and including 300mm². 140°C for PVC insulation with conductor greater than 300mm². 250°C for XLPE insulation. Short-circuit capacities have to be derated if short-circuit temperature limits of other components of the circuit, eg., joints, are less than those stated.
- The short-circuit capacity for durations up to and including 5 seconds may be calculated with the following formula:

$$I_k = \frac{I_t}{\sqrt{t_k}} \quad \text{where} \quad I_k = \text{short-circuit capacity during the time, } t_k.$$

$$I_t = \text{short-circuit capacity for 1 second.}$$

$$t_k = \text{short-circuit duration, seconds.}$$

AMERICAN CONDUCTOR SIZES

American Conductor Sizes in Comparison.

AWG Size	CSA mm ²	MCM Size	CSA mm ²	MCM Size	CSA mm ²
9	6.63	250	127	900	456
8	8.37	300	152	950	481
7	10.6	350	177	1000	507
6	13.3	400	203	1100	557
5	16.8	450	228	1200	608
4	21.2	500	253	1300	659
3	26.7	550	279	1400	709
2	33.6	600	304	1500	760
1	42.4	650	329	1600	811
0	53.5	700	355	1700	861
2/0	67	750	380	1800	912
3/0	85	800	405	1900	963
4/0	107	850	431	2000	1010

American conductor sizes are based on American Wire Gauge (AWG) for small sizes and "circular mils" (CM) for larger sizes. "Mil" is an engineering term for one thousandth of an inch and the "circular mil" is the area of a circle one thousandth of an inch in diameter. The term MCM is used for one thousand circular mils.

IMPERIAL CONDUCTORS

A Comparison of Metric and Imperial Conductors for Fixed Cables.

Metric		Imperial		Calculated Area* mm ²
Nominal Conductor Area mm ²	Stranding No./mm	Nominal Conductor Area sq. in	Stranding No./mm	
0.5	1/0.80	-	-	0.503

1000	127/3.20	-	-	1020
-	-	1.5	127/.128	1050

* The area has been calculated as follows:

For single wires - based on nominal wire diameter. For stranded conductors - based on nominal wire diameter and number of wires.

EARTH SIZE

Minimum Copper Earthing Conductor Size.

Nominal Size Of ACTIVE Conductor	With COPPER Active Conductor	With ALUMINIUM Active Conductor
1.0	1.0*	-
1.5	1.5*	-
2.5	2.5	-
4.0	2.5	-
6.0	2.5	-
10	4	-
16	6	4
25	6	6
35	10	6
50	16	10
70	25	10
95	25	16
120	35	25
150	50	25
185	70	35
240	95	50
300	120	70
400	≥120†	≥95†
500	≥120†	≥95†
630	≥120†	≥120†
>630	≥25% of Active size†	≥25% of Active size†

*These earthing conductors may be used only where incorporated in a multicore cable or flexible cord, other than a lift travelling cable, in accordance with Clause 5.3.3.4(b) & (c) AS/NZS 3000:2007, Wiring Rules.

† A larger earthing conductor may be required to Safety Clause 5.3.3.1.1 of AS/NZS 3000:2007.

INSTALLATION & BENDING RADII

Cable Installation:

In installing PVC sheathed cables, care should be taken to ensure that the ambient and cable temperature has been above 0°C for the previous 24 hours to avoid the risk of cracking of the oversheath.

For groups of parallel single core circuits, the cables should be installed in close trefoil formation as hereunder:

(i) Two conductors per phase

(ii) Three conductors per phase

Recommended Minimum Bending Radii

The following table sets out the recommended minimum bending radii for single or multi-core cables for working voltages up to and including 0.6/1kV. The bending radius is related to the inner surface of the cable, not the axis. Care should be taken in planning a cable installation to allow for as large a bending radius as possible, as excessive bending can be detrimental to cable life expectancy.

Cable Description	During installation	Fixed or Location
1. Subject to overriding requirements of items 2 to 8 listed below:		
a. Overall cable diameter up to 25mm	6D	4D
b. Flexible cords or cables of all diameters	6D	4D
2. Overall cable diameter (exclude Flexible) >25mm	9D	6D
3. Mica Glass taped cables	12D	8D
4. Solid Al or Compacted (including Sector Shaped) Conductor	12D	8D
5. Armoured Cables	18D	12D
6. Metallic Screened Cables	18D	12D
7. HDPE Sheathed Cables	25D	15D
8. Nylon Covered Cables	30D*	20D*

Where D = Overall cable diameter in mm.
 D* = Diameter over nylon jacket.

MAXIMUM PULLING TENSIONS

Using a pulling eye on the conductor:

Copper - 0.07 kN/mm² of conductor³).

Aluminium, Stranded - 0.05 kN/mm² of conductor.

Aluminium, Solid - 0.03 kN/mm² of conductor.

Using a pulling eye on the Steel Wire Armour:

$$P = 0.005 D^2.$$

Using a Stocking grip: (see Note 1)

$$P = 0.0035 D^2.$$

Where: P = Tension in kN.
D = Cable diameter in mm.

Notes:

1. When considering the use of a stocking grip the tension should not exceed the values given for a pulling eye on the conductor(s).
2. 1 kN = 102kgf.
3. Subject to a maximum of 25kN.

SAFE WORKING FORCE

Safe Working Force of Metric Flexible Cables and Cords.

Safe Working Force for cables subjected to straight tension without significant bending or flexing - Safety factor 4 to 1.

Nominal Conductor Area mm ²	Single Core kN	2 Core kN	3 Core kN	4 Core kN	*More Than 4 Cores kN
0.5	0.015	0.030	0.045	0.06	0.015 x N

The faster, more flexible choice for installing cable.

Introducing the new Flexible XLPE & Firestop cable range

Created using quality components for long-life performance, Prysmian's new cable options offer extreme flexibility for fixed applications, in both general and fire rated projects. Easier to install in difficult areas, Prysmian's flexible cabling is the ideal solution on projects where space - and time - are at a premium.

GLOSSARY OF TERMS

Al:

Aluminium conductor.

Ambient temperature for current-carrying capacity:

The temperature of the medium in the immediate neighbourhood of the installed cable -

- a) including any increase in temperature due to materials or equipment to which the cables are connected, or are to be connected; but
- b) excluding any increase in temperature which may be due to the heat arising from the cables at that point.

AS/NZS 2053:

Australian/New Zealand Standard - Conduits and fittings for electrical installations.

AS/NZS 3000:

Wiring Rules.

AS/NZS 3008.1.1:

Australian/New Zealand Standard - Electrical installations - Selection of cables
Part 1.1: Cables for alternating voltages up to and including 0.6/1kV - Typical Australian installation conditions.

AS/NZS 3191:

Australian/New Zealand Standard - Approval and test specification - Electric flexible cords.

AS/NZS 5000:

Australian/New Zealand Standard - Electric Cables - Polymeric insulated.
Part 1: For working voltages up to and including 0.6/1kV.
Part 2: For working voltages up to and including 450/750V.
Part 3: Multicore control cables for working voltages up to and including 450/750V.

Bending radius, installed:

Refers to minimum bending radius to which the cable can be subjected to in its final position or location.

Bending radius, installing:

Refers to minimum bending radius to which the cable can be subjected to during the installation process.

BW:

Building wire, usually refers to single core, insulated and unsheathed cable.

Compacted conductor:

A stranded conductor in which, to reduce overall dimensions, wires have been laid up and pressed together. All conductors in this technical manual are non compacted unless specified.

Conductor:

That portion of a cable which has the specific function of carrying current.

Consumer terminals:

Refer to “Point of Supply”.

CCS:

Copper Covered Steel.

Cu:

Copper conductor, usually refers to plain annealed copper.

HDCu:

Hard drawn copper conductor, for aerial application due to its higher tensile strength.

LSOH:

Low Smoke Zero Halogen.

LV:

Low voltage - a.c. = 50V and ≤1000V; d.c. = >120V and ≤1500V.

Overcurrent:

A current exceeding the rated value.

PACW:

Plain annealed copper wire.

PE:

Polyethylene (See Thermoplastic material).

Point of Supply:

The junction of the electricity distributor’s conductors with the consumers mains. (Formerly known as consumers’ terminals).

PVC:

Polyvinyl Chloride (See Thermoplastic material), the following grades are commonly used:

Insulation Grade	Sheathing Grade	Maximum continuous conductor temperature
V-90*, V-90HT*	3V-90, 5V-90	75°C

*The use of the higher temperature insulation compounds does not permit a higher current-carrying capacity. AS/NZ 3008.1.1 recommends 75°C for current-carrying capacity calculation.

**Where it is possible to guard against plastic flow, and where reduced insulation resistance can be tolerated, V-90HT can be operated at a temperature up to 105°C for an average of 500 hours per annum during the cable service life.

SDI:

Single core double insulated cable.

Short-circuit current:

A fault current resulting from a fault of negligible impedance between live conductors having a difference in potential under normal operating conditions.

Solid conductor:

A conductor consisting of a single wire.

TACW:

Tinned annealed copper wire.

TCu:

Tinned copper conductor.

Thermoplastic material:

A material that can be readily softened and resoftened by repeated heating, eg., PVC and PE.

Thermosetting material:

A material which cures by chemical reaction when heated and, when cured, cannot be resoftened by heating, eg., XLPE.

Tinsel conductor:

A conductor comprising fine flattened copper wires assembled in combination with textile material to achieve a high degree of flexibility.

TPS:

Thermoplastic sheath. (See Thermoplastic material).

XLPE:

Cross linked polyethylene. For LV application, usually refers to X-90 grade. (See Thermosetting material).

ACMA Approval tick.

RCM Approval tick.

Quality
ISO 9001

Whilst every care has been taken in the preparation of this publication, Prysmian takes no responsibility for any errors and or omissions. This booklet is intended as a guide only and reference must be made by any person using this booklet to the appropriate Australian/ NZ Standard and or to local electricity supply authority rulings.

The company reserves the right to make changes in product without notice.

The Prysmian Guide to Cable has been completely revised and makes reference to the most recent information available. Information herein refers to common low voltage power and communication cables used by industry. For information not covered in this publication eg. High Voltage XLPE and EPR, Fibre Optics and other specialised Power and Communication cables please contact your nearest Prysmian Sales Office on 1300 300 304.
