

NATIONAL FIRE PROTECTION ASSOCIATION

The leading information and knowledge resource on fire, electrical and related hazards

## TECHNICAL COMMITTEE ON Gas Process Safety

## NFPA 56, Standard for Fire and Explosion Prevention During Cleaning and Purging of Flammable Gas Piping Systems

## First Draft Agenda May 31, 2018 8:00 AM – 5:00 PM Central Time

- 1. Call to Order. Franklin Switzer, Chair
- 2. Introductions.
- 3. Approval of Pre-First Draft Continuation Meeting Minutes from March 8, 2018. (Attachment A)
- 4. Staff Updates. Lisa Hartman, NFPA Staff
  - Committee membership update. (Attachment B)
  - Fall 2019 revision cycle schedule. (Attachment C)
  - Overview of NFPA Process
- 5. AGA Purging Document, Forth Edition, July 2018 Draft (See NFPA 56 Document Information website available to technical committee only)
- 6. Public Inputs (PIs) review (Attachment D)
- 7. Task Group reports and discussion:
  - Onshore Gathering Lines, Task Group Chair: John Puskar
    - Status: Met in late February. From J. Puskar email dated 2/22/2018: We concluded that the 3 pubic inputs regarding gathering lines do indeed NOT advocate for the inclusion of gathering lines to the standard. In fact, they advocate to not include gathering lines.
  - References. Task Group Chair: Christopher Buehler
  - De Minimus Quantities. Task Group Chair: Michael Bethany
  - Emergency Plan. Task Group Chair: Denise Beach
- 8. New Business.
- 9. Next Meeting. Second Draft meeting must be scheduled between 11/15/2018-5/16/2019.
- 10. Adjournment.

National Fire Protection Association 1 Batterymarch Park, Quincy, MA 02169-7471 Phone: 617-770-3000 • Fax: 617-770-0700 • www.nfpa.org

## TECHNICAL COMMITTEE ON Standard for Fire and Explosion Prevention during Cleaning And Purging of Flammable Gas Piping Systems (GPS-AAA)

## NFPA 56

## Pre-First Draft Continuation Meeting Minutes March 8, 2018 2:00 PM – 3:00 PM Eastern Time Web Meeting/Teleconference

#### <u>Attendees</u>

#### **Committee Members (GPS-AAA):**

Franklin Switzer	S-afe, Inc.
Hocine Ait Mohamed	Saudi Aramco
Chris Buehler	Exponent, Inc.
Paul Cabot	American Gas Association (AGA)
Larry Danner	GE Power & Water
John Doucette	State of CT, Department of Administration
Robert Naper	ANSI Gas Piping Technology Committee
John Puskar	Prescient Technical Services LLC
Bruce Swiecicki	NPGA
Brett Wheelock	OGE/Enogex
Scott Neil (A)	DCP Midstream LLC
Sam Pagadala (A)	AIG
Lisa Hartman, Staff Liaison	National Fire Protection Association, MA

**Guests:** 

Robert Early CGA

### <u>Agenda</u>

- 1. Call to Order. Franklin Switzer called the meeting to order at 2:00 P.M.
- 2. Introductions. Lisa Hartman, Staff Liaison, took attendance and asked if there are any changes to contact information. It was announced that Alan Rice (P), AIG, had retired.
- 3. **Staff Updates.** L. Hartman provided an overview of the Fall 2019 revision cycle schedule.

### 4. Task Group Reports/Public Inputs (PIs) review, as applicable

- Onshore Gathering Lines, Task Group Chair: John Puskar
  - Status: Met in late February. From J. Puskar email dated 2/22/2018: We concluded that the 3 pubic inputs regarding gathering lines do indeed NOT advocate for the inclusion of gathering lines to the standard. In fact, they advocate to not include gathering lines.
- References , Task Group Chair: Christopher Buehler
  - o Status: Has not met yet.
- De Minimus Quantities, Task Group Chair: Michael Bethany
  - o Status: Has not met yet.
- Emergency Plan, Task Group Chair: Denise Beach
  - Status: in progress
- Next Meeting. For the First Draft meeting, the TC has decided on a 1-day meeting in Chicago IL on Thursday, May 31, 2018. Prior to FD meeting, the TC should review ANSI GPTC Z380.1 Guide for Gas Transmission, Distribution, and Gathering Piping Systems, especially page 17- definition of gathering lines, as well as the revised referenced AGA document.
- 6. Adjournment. The meeting adjourned at 2:50 P.M.

# **Percentage Summary** GPS-AAA Gas Process Safety

<u>Class</u>	Voting Number	<u>Percent</u>
E	1	6%
I	3	17%
IM	2	11%
М	4	22%
SE	6	33%
U	2	11%

Total Voting Number 18

	CONTENT
TITLE OF NEW	
	L.2 Non-Application of Standard
	n infrastructure downstream of gas custody transfer meter to the upstream of a gas processing facility Maintenance requirements(Chapters 7and 8) of this Standard
tement of Proble	em and Substantiation for Public Input
Justification:	
purging with an inert frequent isolation va hydrocarbons NFPA procedures to safely	y companies/contractors have in place. The NFPA 56 processes including leak checking, and t gas is not be practical with buried pipe that can be many miles long without purge points and lves, plus condensed hydrocarbons that cannot be removed to a point of meeting the level of requires in the vent effluent. Following AGA gives the end users appropriate Hot Work work under those conditions.
	ver that addendum materials be added to address safe work practices within NFPA 56 that ca systems as non-mandatory information that may assist those performing this work.
hydrocarbons and th	bles and Practices have a specific process to calculate rates of flow to safely remove then remove the air while minimizing mixing, keeping pressures below auto-ignition point and ccessfully for many years. And it is recommended NFPA recognize the AGA method of purgin ervicing pipelines.
	nmend the use of natural gas to clean the pipelines of construction debris. This provision of icable and should be followed.

One who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to ta
prompt corrective measures to eliminate them. [29 CFR 1926.32(f)]
<b>3.3.4</b> * Detection Equipment.
Monitoring equipment necessary for detecting and/or measuring the concentration of flammable gas or oxygen present in air.
3.3.5 End Point.
Attainment of concentration (percent by volume) of inert substance in the closed system being purged su that subsequent admission of air, if purging out of service, or admission of gas or vapor, if purging into service, will not result in formation of a flammable mixture.
3.3.6 Equipment Isolation Valve.
A manual shutoff valve for shutoff of the flammable gas to each piece of equipment.
3.3.7* Flammable Gas.
A material that is a gas at 68°F (20°C) or less at an absolute pressure of 14.7 psi (101.3 kPa), that is ignitible at an absolute pressure of 14.7 psi (101.3 kPa) when in a mixture of 13 percent or less by volum with air, or that has a flammable range at an absolute pressure of 14.7 psi (101.3 kPa) with air of at least 12 percent, regardless of the lower limit. [ <b>55</b> , 2016]
3.3.8* Inert Gas.
A nonreactive, nonflammable, noncorrosive gas such as argon, helium, krypton, neon, nitrogen, and xen [55, 2016]
<b>3.3.9</b> Pig.
A device that is inserted into a pipeline to perform a specific task within the pipeline and that travels freel through the pipeline pulled by a cable; propelled by air, water, or another medium; or driven by the produ flow.
3.3.10 Purge.
To free a gas conduit of air or gas, or a mixture of gas and air. [54, 2015]
3.3.10.1 Purge into Service.
To replace the air or inert gas in a closed system by a flammable gas.
3.3.10.2 Purge out of Service.
To replace the normal flammable content of a closed system by inert gas, air, or water.
3.3.11 Source Valve.
A shutoff valve on the piping system serving a gas supply system where the gas supply, at service pressure, first enters the supply line.
3.3.12 Venting (depressurizing)
To bleed off the gas to be removed from the pipe (purged) from some beginning pressure to a pressure that is near atmospheric pressure, (0 psig), for the purposes of being able to begin a purge out of service procedure.

4.4.1\*

The written procedure for each cleaning and purging activity shall address, as a minimum, the following items:
(1) Scope of work and site-specific purge procedure development
(2) <u>Cleaning and purging method</u>
(3) Piping and instrument diagrams (PIDs)
(4) <u>Chemical and physical properties of flammable gas, cleaning media, purge media, and discharge</u> gas
(5) Determination of purge end point introducing flammable gas, inert gas, or air
(6) Assessment and control of purge inlet and discharge locations
(7)* <u>Mitigation or capture strategies</u>
(8) <u>Temporary piping system design</u>
(9) Management review and approval
(10) <u>Restoration of service</u>
(11) Target design, launcher/receiver venting review for pigging operations
(12) <u>Regulatory permits</u>
(13) Evaluation of engineering controls that allow gases from depressurization to be consumed in a controlled manner instead of vented (e.g., flaring or controlled combustion in process equipment).
(14) Written stand-down instructions to stop activity in a controlled manner
(15) Precautions for gases that have toxic, highly toxic, unstable reactive, corrosive, or other deleterious properties beyond
flammability
(a) <u>flammabi</u>
(b) Validation that purged or vented gases will not be released into a building.
(c) Consideration for venting of piping systems to release pressure.
(16)* Environmental conditions and work locations
(17 <u>Establishment and clear identification of exclusion zones where flammable gas–air mixtures are</u> likely to
exist
(a) <u>exi</u>
(b) Consideration for plume release threat zone modelling
(c) Limited access for personnel not directly involved with purge operations
(d) Assessment of potential for gas migration (e.g., building openings, adjacent structures)
(e) Prohibition of hot work within exclusion zones
(f) Lockout/tagout
(g) Impact of environmental conditions (e.g., wind speed and direction, temperature, barometric pressure) on purge operations
(h) Vehicular and air traffic, if applicable
(i) <u>Topography</u>
(j) Noise control/monitoring
(18) Communication plans
(19) <u>Pre-job briefings</u>

	(20) <u>Work permits</u>
	(21) Roles and responsibilities
	(22) Emergency response plan
	(23) Facility alarm, alert and warning systems
	(24) General facility notification prior to start of purge operations
	(25) General facility notification at the conclusion of purge operations
	(26) <u>Notification of regulatory authorities as required (local emergency responders, utility operators, community officials, environmental authorities, etc.)</u>
(27)	) Control of ignition sources
	(28) Bonding and grounding considerations
	(29) No smoking or spark-producing work within exclusion zones

- (30) Elimination of hot work within exclusion zone
- (31) Static electricity ignition sources at discharge point
- (32) Non-conductive piping, hose, or fittings in temporary piping assemblies

(33) Pre-purge and pressure testing piping system assessment

- (34) <u>Assessment of piping system for trapped liquids, pyrophoric solids, and other flammable or</u> <u>combustible deposits within the piping system</u>
- (35) Ensuring that the piping system is properly isolated
- (36) Limiting site conditions that impact the safety of the

#### activity

- (a) <u>a</u>
- (b) Verification that no isolation valves are seized in position.
- (c) On-site tools and sealants for trunion mounted ball valves
- (d) <u>Review of piping for mechanical integrity including fasteners grade, type, condition and external</u> <u>corrosion of fasteners and piping systems</u>
- (e) Servicing of lubricated plug valves according to manufacturers instructions.
- (f) <u>Review of previous temporary repairs that could include fiberglassing, wraps, or mechanical clamps</u>
- (g) Review of hanger integrity and spacing
- (37)\* Purge monitoring and instrumentation

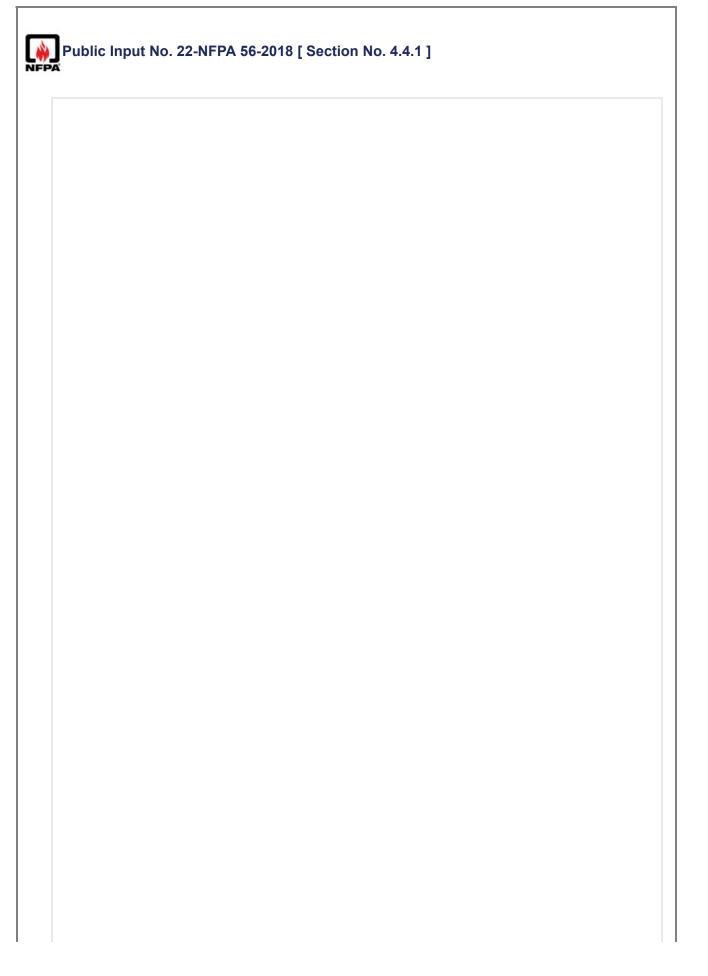

(38 Ensuring that monitoring instruments are appropriate for gas being purged

(39)Training

(40)Calibration

- (41 Monitoring frequency and reporting
- (42)Appropriate selection of sample point(s)
- (43)General atmosphere checks in vicinity of purge gas release
- (44) Protection and Rescue of Personnel
  - (45) Training requirements for personnel involved in the work efforts
  - (46) Personal protective equipment

(47)	Selection of fire-resistant clothing (FRC) shall be based on a hazard analysis in accordance with NFPA 2113
Res	cue
(a)	Provision of rescue equipment, including self-contained breathing apparatus and breathing air escape packs, where this equipmentmight be needed
(b)	Standby rescue personn
(C)	Standby purge operations personnel to take on tasks that were not expected in the plan
(d)	Primary and secondary assembly areas
(e)	Assignment of personnel for alerting and accounting of personnel

	Chapter 5 Training Requirements
	5.1 Training.
	Persons whose duties fall within the scope of this standard shall be provided with training that is consistent with the scope of their job activities and assigned tasks for the cleaning or purging work to be performed. Evidence of knowledge transfer shall be included as part of the training program. <u>Training efforts shall</u> include compliance with ANSI Z490.1 - 2009 Criteria for accepted practices in health, safety and environmental training.
	5.1.1
	Topics covered by such training shall include hazards of flammable gas, hazards of compressed gases used for cleaning or purging, safe handling practices of flammable gas and compressed gas as applicable, and company emergency action plans and procedures <u>and all other relevant topics introduced in chapter 4 as considerations for a complete purging plan</u> .
	5.1.2
	Personnel training shall be conducted by a competent person knowledgeable in the subject matter and shall be documented.
	<u>5.1.</u>
	3_
	Training 3_
	Training shall include demonstration of skills and a witness check off system to validate skills transfer and capabilities. Skills validation shall include at least the following:
	a) Demonstration of proper use of necessary meters and sampling techniques.
	b) Demonstration of proper connection of inerting hose sections.
	c) Demonstration of proper monitoring of inert flows
	d) Demonstration of operating critical valves
	e) Demonstration of using emergency communications equipment
	f) Demonstration of proper use of personal environmental monitors
	g) Demonstration of use of SCBA equipment if part of the project
	<u>5.1.4</u>
	<u>Training</u> records, including dates of training, name of instructor(s), content or curriculum covered, and evidence of knowledge transfer, shall be maintained for a period not less than 5 years from the date of completion of the activity.
e	ment of Problem and Substantiation for Public Input
h i	NSI Z490 is a well known safety training standard that addresses training needs analysis. In addition to this we nould make sure that all of the items requested of a purging plan are within the scope of training. is usual and customary in industrial safety training to document both knowledge and skill transfer. Nothing to da the standard addresses hands on skills vital for safety of purges.
