

# TECHNO Dual-Plate, Metal-Hinged, Wafer-Style Check Valves

ASME Class 125, 150, 300, and 600

TECHNOLOGY

### TECHNO Dual-Plate, Metal-Hinged, Wafer-Style Check Valves

#### **DESIGN FEATURES**

#### Body

Cameron's TECHNO™ brand's body design offers the following features:

- Compact wafer-style, one-piece design
- Center post fully supports the internal assembly without external pins or plugs
- No fugitive emissions to atmosphere is ensured due to its standard design, which eliminates through holes and pipe plugs in the body
- Maximum flow area reduces pressure loss
- Reduces installation space and time

#### Valve Plates

• The dual-plate design produces increased strength with reduced opening and closing time.

#### **Clamp Plates**

 Clamp plates offer additional strength to valve plates and allow seals to be changed easily.

#### Seals

 Specially designed flat, full-contact seals maintain positive shutoff at low working pressures. Unlike most other valves, these seals are replaced easily in the field.

#### Springs

 Torsion springs assist valve plate closure, preventing flow reversal. Consistent valve response ensures against slamming and water hammer.

#### Shaft

 The shaft features heavy-duty, corrosion-resistant construction.

#### Shaft Supports

 Shaft supports act as stops to prevent over-travel of valve plates. They are corrosion-resistant with large shaft-bearing surfaces and are easily removable for internal assembly, maintenance or change.

#### **Thrust Washers**

 Thrust washers reduce friction and wear of valve plate hinges.

#### Standard Models and Materials of Construction

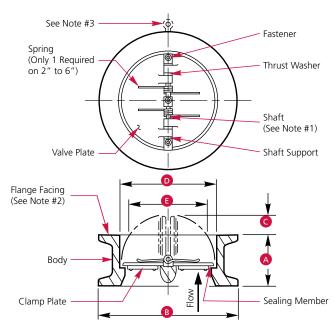

Style	Body	Valve Plates	Seals	Springs	Trim*	ASME Class
5050	Cast Iron	Bronze	Buna-N	316 SS	316 SS	125
5051	Carbon Steel	Carbon Steel**	Buna-N	316 SS	316 SS	150
5051-316	316 SS	316 SS	Buna-N	316 SS	316 SS	150
5053	Carbon Steel	Carbon Steel**	Metal-Metal	316 SS	316 SS	300
5053-316	316 SS	316 SS	Metal-Metal	316 SS	316 SS	300
5056	Carbon Steel	Carbon Steel**	Metal-Metal	316 SS	316 SS	600
5056-316	316 SS	316 SS	Metal-Metal	316 SS	316 SS	600

 $<sup>^{\</sup>star}$  Trim items include: shaft, shaft supports, clamp plates, and fasteners. Teflon $^{\circ}$  or stainless steel thrust wafers are standard.

#### **Optional Materials Selection**

Spring Data					
Materials	Temperature Range ++				
INCONEL®	750° F				
INCONEL X	1000° F				
Seal	Data				
Materials	Temperature Range ++				
Buna-N	-60° F to 225° F				
EPDM	-40° F to 300° F				
Viton <sup>®</sup> /FKM	-20° F to 400° F				
Teflon	-20° F to 450° F				
Silicone	-90° F to 500° F				
FDA-Approved	-40° F to 225° F				
Metal-to-Metal+	-400° F to 1000° F				

<sup>\*\*</sup>This temperature is for general guidance. The figures may vary with application and body/internal materials.

Note 1: Shaft must be in vertical position for horizontal flow application.

Raised faces for all other carbon and stainless steel sizes.

Note 3: Lifting lug feature optional on 6" to 36" sizes.

#### General Dimensions (all dimensions in inches)

Valve Size	ASME Class	А	В	С	D	E‡
2"	125 150	2-1/8 2-3/8	4-1/8 4-1/8	-	2-1/8 2-1/4	-
2-1/2"	125	2-1/8	4-7/8	1/8	2-5/8	1-3/8
	150	2-5/8	4-7/8	-	2-3/4	-

Hydrostatic Test – psi	350	265	265	Hydrostatic Test – psi	450	425

**CAUTION:** Maximum valve temperature rating often is limited by seal and spring materials.

#### **INDUSTRY STANDARDS**

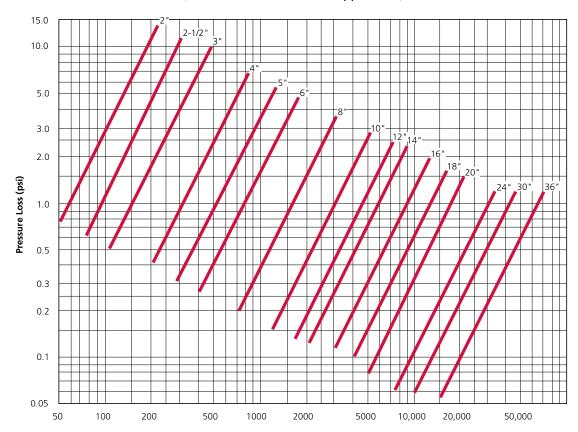

TECHNO dual-plate, metal-hinged, wafer-style check valves are designed, rated, and manufactured in accordance with the following industry standards:

- ANSI B16.1, ANSI B16.34 and ANSI B16.5
- ASME Sections II and VIII
- API 594, except face-to-face dimensions of 2-1/2" to 12" cast iron valve (Style 5050)

If required by your job needs, Cameron can provide the requisite documentation to verify our valves meet the stringent design and material criteria set forth in the above standards. Also, we can perform and document the hydrostatic and leak tests required by API 598, MSS-SP-61 or other such guides.

#### **Pressure Drop Charts for Water Service**

(Based on Horizontal Flow Application)

Flow Coefficients

low Coefficien				
Valve Size	C <sub>v</sub> *			
2"	58			
2-1/2"	92			
3"	160			
4"	320			
5″	525			
6"	800			
8"	1700			
10"	3000			
12"	4700			
14"	5950			
16"	9000			
18"	13,500			
20"	18,000			
24"	32,000			
30"	45,000			
36"	69,000			

Flow of Water at 70° F in gal/min

**NOTE:** Recommended maximum flow rates may be reduced due to maximum velocity ratings. Consult Technical Data section for details.  $^{\circ}C_{v}$  = the number of US gal/min that will result in 1 psi pressure loss across the valve at a temperature of 60° F.

#### **INSTALLATION INFORMATION**

The valve must be installed with the shaft in the vertical position for horizontal flow applications. The valve body is marked with a flow direction arrow and "TOP" to assist with proper positioning.

The torsion spring design allows valve plates to open and close with low pressures. Valves are not recommended on discharge of reciprocating compressors and pumps.
