

Algebra-I (A Basic Course)

Asha Gauri Shankar

About the Book: This book is designed as a textbook for the Undergraduate students. It meets the curriculum requirements of the Course I.2 Algebra I (DC-I) of the University of Delhi. This book is useful for students of any other University also who would like to study the topics covered in this book. It focuses on the introductory aspects of the course, supporting the theory with numerous Examples and Solved Problems. The text starts with equivalence relations, and goes on to functions. It explains the Principle of Mathematical Induction and also proves the Fundamental Theorem of Arithmetic. Complex numbers in polar form have also been introduced and the n th roots of unity have been explained in detail. Linear equations, linear transformations, matrices, eigenvalues and eigenvectors and vector spaces have also been covered.

Calculus of One Variable

M. Thamban Nair

About the Book: The book is meant for a one-semester introductory course on Calculus of One Variable at the Bachelors levels of Science and Engineering programs. It provides clear understanding of the basic concepts of differential and integral calculus, and also introduces slightly advanced topics such as power series and Fourier series. The introduction of sequences and series as the first chapter of the book helps a great deal in the discussion of various other concepts in the later chapters.
