*Ateneo de Manila High School, Philippines*

(Received: 23 December 2014; accepted: 27 May 2016)

*Aspergillus niger* and *Aspergillus flavus* are known to induce risks including aspergillosis in humans and common crop drought to plants. *Allium cepa* (white onion) and *Capsicum frutescens* (cayenne pepper) have been reported as having some antifungal potential. Thus, to practice scientific process skills, high school biology students investigated whether *A. cepa* and *C. frutescens* extracts are effective antifungal agents against these two pathogens. Sensitivity testing using Kirby-Bauer assay revealed that *C. frutescens* was more effective against *A. niger* and *A. flavus*. *C. frutescens* extract alone produced an inhibition zone of 19.29 mm for *A. niger* and 10.47 mm for *A. flavus*. Using *t*-test and repeated measures ANOVA (95% level of confidence), the results were comparable to an antifungal drug miconazole. It is therefore concluded that *C. frutescens* or the mixture of *C. frutescens* and *A. cepa* extracts (50-50 v/v) can be effectively used as antifungal agent against *A. niger*. This study possibly serves as a model for students to learn the scientific method practically and to experience different process skills essential in biological research tangibly.

**Keywords:** *Allium cepa*, antifungal activity, *Aspergillus niger*, *Aspergillus flavus*, *Capsicum frutescens*, laboratory model for high school biology

## INTRODUCTION

*Aspergillus* spp. are fungi commonly present in the air that people breathe (Yassin and Almouqatea, 2010; cf. CDC Website). There are more than 185 known species of *Aspergillus*, and at least 20 of them have been reported to cause human diseases, such as aspergillosis, pneumonia and fungus ball which attacks the lungs (Yassin and Almouqatea, 2010; Choudhury *et al.*, 2011).

The most common species of *Aspergillus* are *A. niger* and *A. flavus* – both species cause diseases in human beings and plants. Moreover, *A. niger* is one of the top three causatives of human fungal

diseases (Barker and Carrington, 1953; Choudhury *et al.*, 2011). *A. niger* is very versatile and not fastidious, allowing itself to grow in different environments and microhabitats where the other fungi cannot. *A. niger* also infects plants, specifically ginger, onion, peanut, grapes and mangoes. It produces toxins that induce crop or fruit rotting rendering them unsafe for human consumption (U. S. EPA Website, 1997; Choudhury *et al.*, 2011).

On the other hand, *A. flavus* produces aflatoxins that cause rotting in plants. It usually infects the seeds of plants like corn and peanut. However, manifestation of the infection becomes apparent

only in the post-harvest and storage stages. As a result, the infected seeds would then not be useful any more (Montes-Belmont and Carvajal, 1998).

Corn is the second most important crop in the Philippines after rice. An annual report generated by the Bureau of Agriculture Statistics (BAS) in 2012 indicated that the crop sector grossed a total of 375.1 billion Philippine pesos, which is 51.79% of the total production of the agriculture sector, and 60% of which comes from the crop sector and 6% is attributable to corn (PSA Website, 2014). If an outbreak of these species of *Aspergillus* arises in the Philippines or even in neighboring Asian countries, the agricultural industry would certainly be paralyzed. With such unfortunate event, the poultry and livestock industries would also be affected because corn is one of the main sources of feeds in the country (Montes-Belmont and Carvajal, 1998). Sixty percent of corn produced in the Philippines (the average is around 3.21 metric tons per hectare) is used for feeds in the livestock and poultry sectors, while the remaining is used for human consumption. This would ultimately have a negative effect on the economy since the combined corn, livestock, and poultry industries are approximately 30% of the total agriculture sector of the Philippines (PSA Website, 2014).

Fortunately, natural products have been proven to inhibit the growth of these fungal species. For example, *Allium cepa* (white onion) has been reported to have some useful medicinal properties: It has anti-inflammatory, anti-asthmatic and antimicrobial properties and was even found to have a good effect on the cardiovascular system (Santas *et al.*, 2010). Moreover, onion has the potential to be a fungicidal agent. Species of *Aspergillus* and *Candida* were not able to reproduce when onion extracts were applied (Benkeblia, 2004). Also, Lanzotti *et al.* (2012) reported that three saponins in onion had a high antifungal activity. *Capsicum frutescens* (cayenne pepper) or locally known as “siling labuyo” in the Philippines, is usually used in food preparation and for homemade remedies (Cichewicz and Thorpe, 1996). De Lucca *et al.*

(2006a) reported that it had an antifungal property due to a certain saponin called CAY-1.

In these studies, the antifungal properties of both *A. cepa* and *C. frutescens* were characterized. However, the effectiveness mainly was examined on the dosage of each sample. Since *A. cepa* and *C. frutescens* have different types of saponins (De Lucca *et al.*, 2006a; Lanzotti *et al.*, 2012), it is presumed that the two would complement each other and become a stronger fungicidal agent. Therefore, in the present study, the combined antifungal effects of the extracts of *A. cepa* and *C. frutescens* on the growth of *A. niger* and *A. flavus* were investigated.

It should be noted that the present study came about after high school students were immersed to the different concerns about the safety of food crops and the development of antimicrobial agents through the works of Pandey *et al.* (1982) and De Lucca *et al.* (2006b) with further reinforcements from local news articles and stories in Philippine provinces. The students also learned from Yassin and Almouqatea (2010) that scientists had been producing much safer antifungal agents from plants in comparison to synthetic or artificial fungicides, which might be harmful to both plants and humans.

## MATERIALS AND METHODS

### *Preparation of Test Organisms*

Pure cultures of *A. niger* and *A. flavus* were obtained from the Microbial Culture Collection and Testing Laboratory of Department of Biological Sciences, Central Luzon State University, Philippines. All apparatus used were sterilised with heat. The pure cultures of *A. niger* and *A. flavus* were inoculated from a heated wire loop on the potato-dextrose-agar (PDA) slants and were kept in the refrigerator at 5°C until needed.

### *Acquisition and Extraction of Plant Materials*

Plant materials, *A. cepa* bulbs and *C. frutescens* fruits, were purchased from a local market. They were identified by an agronomist at the Central Luzon State University.

Extraction procedure was carried out as adapted and modified from Abdou *et al.* (1972) and Benkeblia (2004). The cayenne pepper, alongside with onions were washed with clean water and allowed to air dry for 4 days. The outer coverings (tunic) of onion's bulb were manually peeled off. They were then separately cut into small pieces and underwent the process of maceration in which 20 g of each of the dried plants were soaked in 20 ml of 20% ethanol for 48 hours. They were then filtered using a filter paper.

#### Antimicrobial Sensitivity Testing

Sensitivity testing was carried out for *A. niger* and *A. flavus* using the Kirby-Bauer technique (Bauer *et al.*, 1966). A sterile cotton swab was used to spread the microorganisms all over the surface of the PDA plates. The plates were allowed to dry for about 5 minutes.

Whatman filter paper No. 2 disks, 6 mm in diameter, were immersed in the extracts of *A. cepa*, or *C. frutescens*, a 50-50 v/v mixture of *C. frutescens* and *A. cepa* extracts, chloramphenicol (30 mg/ml), or miconazole (30 mg/ml). The disks were placed on respective plates of test organisms which then were incubated at 37°C for 72 hours. Three

replicates were made.

#### RESULTS

All the treatments showed positive results (Figure 1). The extracts inhibited the growth of *A. niger*. Chloramphenicol exhibited the widest zone of growth inhibition for *A. niger* (26.97 mm). The zones of growth inhibition of *C. frutescens* extract (19.29 mm) and the mixture of *A. cepa* and *C. frutescens* extracts (19.20 mm) were statistically comparable to that of miconazole (20.33 mm) using *t*-test and repeated measures ANOVA (95% level of confidence).

For *A. flavus*, *C. frutescens* extract inhibited the growth to a certain extent (10.47 mm) which was not comparable to chloramphenicol (25.50 mm) and miconazole (16.25 mm). However, this value was significant compared to the other treatments which did not significantly inhibit the growth of *A. flavus*.

#### DISCUSSION

Phytochemical testing in previous studies, such as Benkeblia (2004) and Kamilla *et al.* (2009), revealed that secondary metabolites present in cer-

**Figure 1** Inhibition zone (in mm) of *Capsicum frutescens* extract (Cf), *Allium cepa* extract (Ac), the 50-50 v/v mixture of *C. frutescens* and *A. cepa* extracts (Cf-Ac), chloramphenicol (C+), miconazole (M+), and distilled water (D-) against *Aspergillus niger* and *Aspergillus flavus*

tain plant extracts and commercially available medicines are responsible for antifungal activities against fungi from genera *Aspergillus* and *Candida* among others. The tested plants contain tannins, polyphenols, alkaloids and glycosides, which have natural antimicrobial properties (De Lucca *et al.*, 2006a; Lanzotti *et al.*, 2012).

Saponins are also a group of these secondary metabolites. They serve as important components in a wide range of plant species, for they function as a defending agent against microbial infections (Lanzotti *et al.*, 2012). They have detergent-like properties that are lethal to fungi due to their ability to combine with membrane sterols, which cause a loss of membrane integrity. Some plant species show compromised resistance to different fungal pathogens because of a deficiency in saponins (De Lucca *et al.*, 2006a). Two saponins found in *C. frutescens* were tested amongst many strains of fungi, including some strains of *Aspergillus*, and were shown to be effective antifungal agents against most strains of fungi (De Lucca *et al.* 2006b). On the other hand, Ceposide A, B, and C are the saponins found in *A. cepa*, which have also been tested positively against different strains of fungi (Lanzotti *et al.*, 2012).

In the present study, *C. frutescens* extract showed the highest activity in all experiments. Antifungal results of *C. frutescens* were in line with that of Kamilla *et al.* (2009) who got 19.89 mm as the average zone of inhibition of *Clitoria ternatea* on *A. niger*. *A. cepa* extract showed an inhibitory activity against *A. niger*, but significantly less activity against *A. flavus*. Using repeated measures ANOVA, there was a significant difference between the results for *A. flavus* and for *A. niger*. This suggests that *A. flavus* might be resistant to *A. cepa* as affirmed by De Lucca *et al.* (2006a). The 50-50 v/v mixture of *A. cepa* and *C. frutescens* extracts showed an exemplary result for *A. niger*. On the other hand, the result for *A. flavus* was significantly lower. The result gap may be due to the synergism of the resistance of *A. flavus* to *A. cepa* and uncertain factors.

The description of methods and the presentation of findings in the present paper are derived from an attempt of high school students to apply the “scientific process research skills” necessary in biology. Onorato (2014) noted that one of the reasons why students have difficulty appreciating these research skills is the use of conceptual approach in teaching them, rather than the use of practical approach in the context of an actual scientific investigation problem. Thus, through the study they conducted as a class requirement, the first year high school students (grade 9, ages 14 - 15) were exposed to meaningful experiences to make theory meet practice while triggering curiosity to higher-level science for their age.

#### ACKNOWLEDGEMENT

The authors thank the Science Subject Area of Ateneo de Manila High School and the Department of Biological Science of the Central Luzon State University for all the support throughout the study.

**Biology Education in Upper Secondary Schools  
at Present in Japan****Teiko Nakamichi\* and Nobuyasu Katayama***Tokyo Institute of Biology Education, Japan*

(Received: 31 October 2017; accepted: 14 March 2018)

The present Japanese national curriculum standard, the Course of Study (CS), for upper secondary schools was announced in 2009 by the Ministry of Education, Culture, Sports, Science and Technology, Japan (MEXT). The mathematics and science curricula are being enforced in upper secondary schools from 2012. In the present CS, biology-related subjects for upper secondary schools are “Basic Biology” (biology for all, 2-credit) and “Advanced Biology” (biology for interested students, 4-credit). In 2017, about 95% of students are taking Basic Biology, and 22% of students are taking Advanced Biology. “Basic Biology” is composed of three units: (1) Organisms and Genes, (2) Maintenance of Internal Environment, and (3) Biodiversity and Ecosystems. The key words for Basic Biology are DNA, Health and Environment. In addition, “Basic Biology” emphasizes concepts of Unity and Diversity with relation to Evolution. “Advanced Biology” is composed of five units: (1) Life Phenomena and Substances, (2) Reproduction and Development, (3) Environmental Response, (4) Ecosystems and Environment, and (5) Evolution and Phylogeny. Both subjects have inquiry activities at the end of each unit. These biology-related subjects have been modernized by reflecting the rapid progress in life science research in recent years. As a result, a lot of newest topics in biological sciences and new biological terms have appeared in biology textbooks. Some new modern experiments have also been introduced. In 2014, the action of revising the present CS was started. MEXT will announce the new CS for upper secondary schools by March, 2018, and will enforce it from 2022. The guiding concept of the CS revision is to enable students to cope with the changes in Japanese society when they become adults. Therefore, the strategy of school education must be improved. The new CS will shift from the traditional content-based teaching to competency-based learning by introducing some innovative methods such as active learning.

**Key words:** *biology education in Japan, contents modernization, Course of Study, upper secondary school.*

\*Author for correspondence: [teiko-n@nifty.com](mailto:teiko-n@nifty.com)

**INTRODUCTION**

Since 1947 when a new mandate for education in Japan began, the Japanese national curriculum standard, the Course of Study (CS), has been revised by the Ministry of Education, Culture, Sports, Science and Technology, Japan (MEXT) about every ten years (Table 1, Kata-

yama *et al.* 2004, Nakamichi 2011). The present CS for elementary schools is being enforced from 2011, and that for lower secondary schools from 2012. The present CS for upper secondary schools was announced in 2009 and the revised curricula of mathematics and science are being enforced from 2012, one year earlier than those of the other subjects (Table

1). As mentioned in Table 1, the CS for both elementary schools and lower secondary schools has been revised and announced in 2017; the newly revised CS for elementary schools will be enforced from 2020 and that for lower secondary schools will be enforced from 2021. The CS for upper secondary schools will be revised and announced by March, 2018 and the revised CS will be enforced from 2022. The present CS has three principles, "Solid academic prowess," "To be rich in humanity," and "Health and fitness," all of which support the fundamental philosophy of the CS, "Zest

for life" (Nakamichi 2011). The fundamental philosophy is carried on by the newly revised CS.

In the present CS for Science for upper secondary schools, there are ten science subjects (Table 2, Nakamichi 2011). Among them there are two new subjects, "Science and Our Daily Life" and "Science Project Study." The former subject, which is correspondent to Basic Science in the last CS, aims to raise students' interests in nature, science and technology. The latter subject aims to enrich students' inquiry abilities. In the latest revision

**Table 1** Year of Announcement and Enforcement of the Course of Study in Japan

\* The year of announcement of the Course of Study.

\*\* Comp. Sci. A / B: Comprehensive Science A (Physics and Chemistry areas) and Comprehensive Science B (Biology and Earth Science areas).

\*\*\* P / C / B / E: Physics, Chemistry, Biology and Earth Science.

of the CS, Comprehensive Science A and B have been deleted and four 2-credit basic subjects, *i.e.*, Basic Physics (P), Basic Chemistry (C), Basic Biology (B) and Basic Earth Science (E) which correspond to respective traditional subject areas, have been established. These basic subjects are prepared for almost all students. Students have to take at least three 2-credit subjects (Basic P / C / B / E) or two 2-credit subjects including Science and Our Daily Life; it is supposed that most students will choose the former pattern because the contents of Science and Our Daily Life are not considered to be included in university entrance examinations. This credit requirement enables students to take many more subjects in different fields of science. There also are four 4-credit advanced subjects for respective science fields. These advanced subjects are provided for the students who are interested in a particular field of science. Every advanced subject is designed to let students study the corresponding field of science in a systematic way.

### **BIOLOGY-RELATED SUBJECTS IN THE PRESENT CS AND THEIR CONTENTS**

In this chapter, the contents of biology-related subjects for upper secondary school students in the present CS, *i.e.*, “Basic Biology” and “Advanced Biology,” are reviewed.

#### ***Contents of Basic Biology (2-credit)***

Basic Biology (Biology for All) is composed of the following three units: Unit 1 Organisms and Genes, Unit 2 Maintenance of Internal Environment (Homeostasis), and Unit 3 Biodiversity and Ecosystems. Key words for this subject are DNA, Health and Environment (Table 3).

Although Basic Biology is a subject which corresponds to Biology I in the last CS, its contents have changed and been modernized significantly (Table 4). In the first unit, the contents are mainly related to cellular and molecular biology. In the second unit, students study the mechanism of maintenance of the internal environment and immunity in multicellular organisms. The contents can give basic knowledge to understand human health and illness. In the third unit, students study biodiversity and a variety of ecosystems; they are expected to realize the importance of environmental conservation through understanding the structure and function of ecosystems. In each unit, there are some observations and experiments. In addition, on completing the study of each unit, students are required to carry out some inquiry activities whose topics are related to the contents of the unit. These are the same as for Biology I in the last CS.

A noticeable characteristic of Basic Biology is to emphasize the concepts of “Unity” and “Diversity” which are related to evolution, though there is no heading of “Evolution.”

**Table 3 Composition of Basic Biology**

Unit	Hierarchy Level	Aspects of Scientific Literacy
Organisms and Genes	Cellular and Molecular Level	Basis of Molecular Biology (DNA)
Maintenance of Internal Environment	Individual Level	Health
Biodiversity and Ecosystems	Community and Ecosystem Level	Environment

	Unit 3. Biodiversity and Ecosystems (1) Vegetation diversity and distribution <ul style="list-style-type: none"> <li>• Vegetation and succession</li> <li>• Climate and biomes</li> </ul> (2) Ecosystems and their conservation <ul style="list-style-type: none"> <li>• Ecosystem and the circulation of matter</li> <li>• Ecological balance and conservation</li> </ul> (3) Inquiries into biodiversity and ecosystems

It had been pointed out by many biology educators and biologists that biology-related subjects in the last CS for both lower secondary schools and upper secondary schools were lacking in the concept of evolution. However, in the present CS, evolution is regarded as the most important concept in biology and is treated as a superior concept among biological concepts. Therefore, in Basic Biology, teachers are asked to teach “the unity and diversity of organisms” prior to the other topics to let students understand that the phenomena are the results of evolution.

#### **Contents of Advanced Biology (4-credit)**

As shown in Table 5, Advanced Biology (Biology for Interested Students) is composed of the following five units: Unit 1 Biotic Phenomena and Substances, Unit 2 Reproduction and Development, Unit 3 Responses to the Environment, Unit 4 Ecosystems and Environment, and Unit 5 Evolution and Phylogeny.

Unit 1 is related mainly to the phenomena at molecular, subcellular and cellular levels. Unit 2 and Unit 3 are the phenomena at organ and individual levels. Unit 4 is the phenomena at the level of population and above. The final unit treats evolutionary phenomena and the theory of evolution.

The following are three key characteristics of this subject: (1) Contents correspond to rapid progress in life science research in recent years, (2) Viewpoint of “unity and diversity” is continually emphasized from Basic Biology onward through other biology contents, and (3)

**Table 5 Comparison of major headings of Biology II and Advanced Biology**

Biology II in the last CS (1999)	Advanced Biology in the present CS (2009)
Unit 1. Life phenomena and Organic Substances (1) Proteins and their functions <ul style="list-style-type: none"> <li>• Enzymes and chemical reactions within organisms</li> <li>• Anabolism and catabolism</li> <li>• Functions of proteins</li> </ul> (2) Genetic information and its expression <ul style="list-style-type: none"> <li>• Genetic information and synthesis of protein</li> <li>• Regulation of phenotypic expressions and morphogenesis</li> <li>• Biotechnology</li> </ul>	Unit 1. Biotic Phenomena and Substances (1) Cells and molecules <ul style="list-style-type: none"> <li>• Living substances and cells</li> <li>• Life phenomena and protein</li> </ul> (2) Metabolism <ul style="list-style-type: none"> <li>• Respiration</li> <li>• Photosynthesis</li> <li>• Nitrogen assimilation</li> </ul> (3) Expression of genetic information <ul style="list-style-type: none"> <li>• Genetic information and its expression</li> <li>• Control of gene expression</li> <li>• Biotechnology</li> </ul> (4) Inquiries into life phenomena and substances
Unit 2. The Classification and Evolution of Organisms (1) The classification and phylogeny of organisms <ul style="list-style-type: none"> <li>• Classification</li> <li>• Phylogeny</li> </ul> (2) The evolution of organisms <ul style="list-style-type: none"> <li>• Changes in organisms</li> <li>• Mechanisms of evolution</li> </ul>	Unit 2. Reproduction and Development (1) Sexual reproduction <ul style="list-style-type: none"> <li>• Reduction division and fertilization</li> <li>• Genes and chromosomes</li> </ul> (2) Development of animals <ul style="list-style-type: none"> <li>• Gametogenesis and fertilization</li> <li>• Process of early development</li> <li>• Cell Differentiation and morphogenesis</li> </ul> (3) Development of plants <ul style="list-style-type: none"> <li>• Gametogenesis, fertilization and embryogenesis</li> <li>• Differentiation of organs in plants</li> </ul> (4) Inquiries into reproduction and development
Unit 3. Biocoenose (1) Populations, their structures and maintenance <ul style="list-style-type: none"> <li>• Population maintenance and adaptation</li> <li>• Matter production and plant lives</li> </ul> (2) Biocoenose and ecosystems <ul style="list-style-type: none"> <li>• Biocoenose, their maintenance and changes</li> <li>• Ecosystems and their balance</li> </ul>	Unit 3. Responses to the Environment (1) Responses and behavior of animals <ul style="list-style-type: none"> <li>• Stimuli reception and reaction</li> <li>• Behavior of animals</li> </ul> (2) Responses of plants <ul style="list-style-type: none"> <li>• Plant response to the environment</li> </ul> (3) Inquiries into responses to the environment
Unit 4. Research Activities (1) Research on particular organisms or life phenomena (2) Investigation of the natural environment	Unit 4. Ecosystems and Environment (1) Population and biotic community <ul style="list-style-type: none"> <li>• Population</li> <li>• Biotic community</li> </ul> (2) Ecosystems <ul style="list-style-type: none"> <li>• Matter production in an ecosystem</li> <li>• Ecosystems and biodiversity</li> </ul> (3) Inquiries into ecosystems and environment
	Unit 5. Evolution and Phylogeny (1) Mechanism of evolution <ul style="list-style-type: none"> <li>• Origin of life and transition of organisms</li> <li>• Mechanism of evolution</li> </ul> (2) Phylogeny <ul style="list-style-type: none"> <li>• Phylogeny</li> </ul> (3) Inquiries into evolution and phylogeny

Various fields from the micro level to the macro level are covered. In each unit, some new topics are included, *e.g.*, biomembrane and cell skeleton in Unit 1, processes of organogenesis in plants in Unit 2, neuro-ethology and photo-receptors in Unit 3, diversity of organisms at various levels in Unit 4, and neutral theory of molecular evolution and three domains in phylogeny in Unit 5.

### NUMBER OF STUDENTS WHO TOOK BIOLOGY-RELATED SUBJECTS

Figure 1 shows the changes in the number of textbooks of each basic subject (left) and each advanced subject (right) sold. The figures are compiled by using the data obtained from The Jiji Press (2014, 2015, 2016 and 2017) which were based on MEXT data. These numerical values are considered to roughly correspond to the number of students who took each subject. In the school year 2017, nearly 1.1 million students (about 95% of senior secondary students) take Basic Biology; it is the highest rate of course registration in basic subjects. About 261 thousand students (about 22% of senior secondary students) take Advanced Biology. In the school year

2013, the number of students who took one of these subjects appears to be smaller than in the later school years because all schools did not necessarily start all science subjects in this school year. The number of students who take Advanced Biology has been decreasing continuously after the school year 2015.

### OBSTACLES TO ENFORCING THE LATEST BIOLOGY CURRICULUM FOR UPPER SECONDARY SCHOOLS

On enforcing the present CS, MEXT encourages science teachers to introduce various students' activities into their teaching to nurture students' abilities of thinking, decision-making and expression. The ministry requests them to avoid the traditional chalk and talk teaching style (a teaching style of only the teacher's explanation and his/her writing on the blackboard). The following student activities are recommended:

- Peer discussion using a tablet, a whiteboard and/or post-its,
- Explanation including a poster presentation and a debate between the students, and
- Making a handout, a report or a poster,

**Figure 1** Changes in the number of students who took each basic subject (left) and each advanced subject (right).

▲: Biology, ■: Chemistry, ◆: Physics, ●: Earth science

using Information and Communication Technology (ICT).

Thus, science teachers in both lower and upper secondary schools are expected to shift their teaching style from teacher-centered to student-centered. But, many science teachers feel some difficulties in implementing the above-mentioned student activities in their classes, and they consider the time allotted to science is insufficient for such time-consuming activities. Not only because of such time limitation, but also because of their inexperience in student-centered teaching style, many teachers still prefer to adopt the teacher-centered teaching style. They are apt to require students to memorize the items and terms of the textbook for term examinations. At the upper secondary level, science teachers still consider it necessary to give a lot of information to students in preparation for university entrance examinations instead of allotting time for inquiry activities.

In spite of the rapid progress in biological and life science research and the accumulation of new biological knowledge, the contents of upper secondary school biology had remained rather static until the last revision of the CS. But, by the latest reform, biology education at the upper secondary level has been modernized by reflecting the rapid progress in biological research in recent years, bringing it closer to biology education at the tertiary level. Especially in the case of Advanced Biology, the quantity of topics has increased and the contents have become more challenging. As a result, some new problems have arisen. For example: (1) Although a lot of the newest topics in biological sciences and new biological terms appear in biology textbooks, many biology teachers, especially older ones, in upper secondary schools lack up-to-date knowledge of biology; (2) Some new modern experiments have been introduced, but most of the older biology teachers are lacking the skills for in-

structing students in new modern experiments. In addition, most schools, particularly public schools, do not have enough equipment for new modern experiments.

It is desirable that some effective measures for surmounting these obstacles be promptly implemented. However, both national and local governments still have not adopted enough measures for in-service teacher training. The budget for improving school science equipment also does not seem to be enough.

Another problem is related to the recent trend in the “Textbook Authorization” process (see Appendix 1). Recently, “Textbook Authorization” for biology textbooks, particularly for Advanced Biology textbooks, has become relaxed. As a result, a wider range of topics including up-to-date contents have been introduced in Advanced Biology textbooks. Then, there seems to be a big gap in the degree of difficulty in understanding the contents between Basic Biology and Advanced Biology. Many biology teachers feel they are forced to teach students all of the contents in the Advanced Biology textbook within the school hours allotted to this subject. Students think that they have to memorize lots of contents when they take Advanced Biology. This must be one of the reasons why the number of students who take this subject has been decreasing (Fig. 1).

In addition to the increase in the amount of contents mentioned above, there also is an increase in the number of biological terms which include some latest ones in the present upper secondary biology textbooks (Matsu-ura 2013, Nakamichi 2018, see Appendix 2). Among these terms, there are quite a few synonyms. So far, it has been pointed out that too many biological terms used in biology textbooks possibly make students lose interest in learning biology, and the use of synonymous terms makes both biology teachers and students confused. Students are required to memorize all

of these terms including synonyms for term examinations and for university entrance examinations if they choose biology as one of the examination subjects. Unfortunately, only a few attempts at reduction and standardization of these terms have been carried out until now. Furthermore, no reflection of the results of these few attempts has appeared in biology textbooks, yet.

## PREPARATION AND ENFORCEMENT OF THE NEXT CS

### *Schedule of CS revision*

In 2014, the Minister of MEXT requested the Central Council for Education (CCE) to commence discussion for revising the CS (MEXT 2014). In 2015, the CCE submitted an Interim Discussion Report to the Minister of MEXT (MEXT 2015) and, in 2016, the CCE submitted the Final Discussion Report to the Minister (MEXT 2016). After this, as shown in Table 1, MEXT announced the new CS for elementary schools and lower secondary schools in 2017 (MEXT 2017). MEXT will announce the new CS for upper secondary schools by March, 2018. Now, textbook publishers are preparing new textbooks. The textbook authorization process for new textbooks by MEXT will be started from 2018 onward. The new CS for elementary schools, lower secondary schools and upper secondary schools will be enforced from 2020, 2021 and 2022, respectively.

### *Conception and realization of the CS revision*

The guiding concept of the CS revision is to enable students to cope with the changes in Japanese society when they become adults. At that time, in Japan, there will be a reduction in the working-age population, a progression of globalization, and technological innovation. It will be more important for students to be aware of the connection between their learning and the changing society than ever before. Students will be expected to foster the follow-

ing qualities and abilities which will be required for a new era.

- (1) Practical knowledge and skills;
- (2) Abilities of thinking, decision-making and expression in responding to unexpected situations;
- (3) Individual characteristics enabling them to use acquired knowledge and abilities to live a better life and engage in regional and international societies.

Therefore, the strategy of Japanese school education in the future must be improved in order to satisfy these students' needs. From now on, the quality of contents is more strongly emphasized. Thus, it is necessary to consider "what knowledge students acquire" and "what they can do using the knowledge they have acquired." In addition, the quality of learning method, *i.e.*, "how to learn," should be considered to deepen students' understanding; it is strongly recommended that the teaching style be shifted from teacher-centered to student-centered. It is also important to evaluate "what kinds of abilities students have acquired" as an outcome of student learning. Therefore, in the new CS, competency-based education, by introducing some innovative methods, such as active learning, will be incorporated with the traditional content-based education.

For realization of the new CS, in general, the following must be considered:

- Improvement of the quality of learning process;
- Pre- and in-service teacher training for student-centered teaching style, such as active-learning;
- Promotion of ICT use;
- Reform of the university entrance examination system;
- Improvement of the working environment for teachers.

In science, in particular, laboratory equipment and teaching materials must be updated

to cope with the modernization of the subject matter. In-service training to give science teachers up-to-date knowledge of biology and skills for teaching with new modern experiments is also essential.

**Note:** This paper is based on the country report presented at the 26th Biennial Conference of AABE.

## APPENDIXES

### ***Appendix 1: Textbook Authorization***

In Japan, there is a “Textbook Authorization” system. Books to be used as textbooks for Japanese elementary and secondary schools are compiled and edited by private publishers. Textbook Authorization is the process of screening these books. Through the careful deliberations of the Textbook Authorization Council under the control of MEXT, these books are examined to decide whether they are appropriate for use as textbooks. Science textbook authorization has been carried out by certain examiners in the Elementary and Secondary Education Bureau, MEXT, who have scientific and educational backgrounds. The purpose of textbook screening might be the correction and improvement of the material in textbooks. In practice, however, the textbook screening has come to be a severe check to see if they deviate from the CS and its guidelines.

So far, regarding biology textbooks for upper secondary students, some important biology concepts and the concepts in other science areas which are required for understanding biological phenomena were requested to be deleted from biology textbooks, because they were not included in the biology section of the CS and its guidelines. As a result, biology textbook authorization made it more difficult for teachers to teach biology because these textbooks restricted biology education within narrow limits. On the other hand, scientific terms appearing in biology textbooks do not seem to have been examined thoughtfully in the textbook authorization process. This resulted in the number of scientific terms being very large compared to the textbooks of other science areas. Moreover, there were many synonymous terms (see below).

The process of textbook “authorization” by the officers of MEXT continues, but the screening of textbooks at present is not as severe as before.

### ***Appendix 2: Scientific terms used for biology education in Japan***

In Japan, science subjects are taught in Japanese, and therefore only Japanese scientific terms are used in teaching science and in science textbooks. Among science subjects for upper secondary students, the number of scientific terms appearing in biology textbooks is larger than that in textbooks of other science subjects. Biology learners in upper secondary schools are forced to memorize a lot of scientific terms. This has been considered to be a burden to upper secondary school students who choose biology and it leads to many students losing interest in learning biology.

Furthermore, there are a lot of Japanese synonymous terms in biology. Synonymous scientific terms appearing in biology textbooks for Japanese upper secondary students are much larger in number than those appearing in biology textbooks for English upper secondary students. Sometimes three or more synonymous Japanese scientific terms are used for one English term. Usually, in a biology textbook, one of these synonyms is used according to the authors’ decision. Frequently, one of these synonyms is used at random in university entrance examinations. Therefore, students must memorize a lot of biological terms including all of these synonyms if they choose biology as a university entrance examination subject. This has been an issue for a long time, but only a few attempts at reduction and standardization of biological terms have been carried out. Details of this matter will be described elsewhere.

## Contents of the Proceedings of Past Biennial Conferences of the AABE

The AABE published the proceedings of each biennial conference, from the first conference to the seventeenth one, until 1998. Since then, the association has been publishing AJBE as its bulletin which includes the conference reports and the abstracts of the papers presented at each conference. At present, it is difficult to obtain not only a copy of these proceedings, but even the information on the contents of them. Here is the table of contents and author index of the proceedings (Volume 1 – 17). As for further information on these proceedings, please inquire of the AABE Website master.

		Biology Education in Secondary Schools in Japan	
		<i>Nakajima, Y.</i>	207
		<b>Concluding Report</b>	210
		<b>The Conference Program</b>	214
		<b>Addresses</b>	
		Welcome Address: <i>Manuel, J. L.</i>	218
		Keynote Address: <i>Medina, G. F.</i>	220
		Orientation and Overview: <i>Soriano, L. B.</i>	224
		<b>The Participants and Officers of the Conference</b>	
<b>&lt; III &gt; Third Conference held in Manila, Philippines (December, 1970)</b>			
Third Asian Regional Conference on School Biology			
<b>Research Project Papers</b>			
“Green” Bean and “Butter” Bean – Varieties of Species?			
<i>Marandawala, P.</i>	1		
Supporting Function of Collenchyma as Seen in the Petiole of <i>Typhonium roxburghii</i>			
<i>Eriyagama, I.</i>	9		
“Lipase” Activity in Seeds			
<i>Eriyagama, I.</i>	13		
The Amount of Water Given out from Leaves of Different Ages			
<i>Weerasinghe, A.</i>	20		
Colour Change in the Petals of <i>Hibiscus mutabilis</i>			
<i>Hoole, G. J.</i>	25		
Some Observations on the Breeding Habits of the Ceylon House Sparrow			
<i>Daniel, C. J. S.</i>	32		
Age of Menarche in School Girls in Kandy, Ceylon			
<i>Dissanayake, P.</i>	37		
Rejuvenation of Mandarin			

227		178
	<i>Tarmir, P. and Glassman, B.-G.</i>	
	English Translation of Practical Examination in Biology 1971 (Bagrut Ha Ma'asit) for Classes Using BSCS Curriculum	
	<i>The Amos de Shalit Science teaching Center, The Hebrew University</i>	187
	Attitudes of Students and Teachers towards the Practical Matriculation in Biology	
	<i>Tarmir, P.</i>	205
	<b><i>Evaluation of Attitudes and Interests</i></b>	
	Students' Attitudes towards a School Subject as Affected by Curriculum Reform	
	<i>Blum, A.</i>	215
	Assessing "Understanding of the nature of Science"	
	<i>Jungwirth, E.</i>	220
	<b><i>Problems in Evaluation</i></b>	
	Evaluation of Student's Attitudes towards Drawings in a Student's Text	
	<i>Blum, A.</i>	234
	Attitudes of Junior High School Students towards the Study of Plants and Animals	
	<i>Mayer, M. and Tamir, P.</i>	240
	Assessment of Children's Ability to Observe	
	<i>Zuzovsky, R.</i>	253
	<b>The Uses of Educational Technology in Science Education</b>	
	<b><i>General Considerations in the Uses of Technologies in Education</i></b>	
	The New Bio-Technology – Potential Applications to the Educational Environment	
	<i>Beal, J. B.</i>	263
	Educational Consideration in the Use of Technology in Education	
	<i>Salomon, G.</i>	277
	Closed Circuit Television in the Teaching and Learning Concept in Higher Education	
	<i>Elton, L. R.</i>	285
	<b><i>Uses of Technological Means in Teacher Training</i></b>	
	The Use of Technological Means in Teacher Training and Retraining	
	<i>Allen, D.</i>	291
	The Uses of Technological Means in Teacher Training and Retraining	
	<i>Lee, A. and Lewis, M.</i>	295
	The Use of Microteaching Techniques to Train Student-Teachers in Stimulating Learners' Questions	
	<i>Perlberg, A. and Kremer, L.</i>	314
	The Facet Approach in Developing a Theory of Instruction and Teacher Training	
	<i>Bar-on, E. and Perlberg, A.</i>	323
	The Use of the Technion Diagnostic System (T.D.S) and Microteaching Techniques in Modi-	

ifying Teaching Behavior <i>Perlberg, A., Baryam, M., Levey, A., Bar-on, E., Levin, R., Pinkas, D., Etrog, A., Noam, J., Inbar, S. and Starobinetz, C.</i>	326	Towards Independent Study <i>Elton, L. R.</i>	430
Modifying Instructional Strategies of Teachers in Service through the Use of Microteaching Techniques and Video Recordings <i>Perlberg, A., Shimron, D., Rot, S. and Libaee, Y.</i>	329	A Modular Approach to Biology Curricula <i>Dowdeswell, W.</i>	434
Patterns and Styles in the Supervision of Teachers in Individual Conferences Following Classroom Observations <i>Theodor, E. and Perlberg, A.</i>	332	Individualized Instruction: A Proper Context for It <i>Edling, J. V.</i>	434
A Different Approach to the Use of Microteaching in Teacher Training <i>Tamir, P.</i>	335	<b><i>Use of Technological Means in General Classroom Work and Individualized Instruction</i></b>	
<b><i>Uses of Technological Means in Classroom Instruction</i></b>		Can Students of Mixed Abilities Successfully Study Biology in the Same Classroom? <i>Sabar, N.</i>	448
The Use of Film and Television in Science Education <i>Smith, J.</i>	341	Instructional Television Centre: Facts and Fig- ures <i>Ben-Shaul and Prener, J.</i>	455
Uses of Educational Technology: Computer Literacy Course <i>Peless, Y.</i>	347	Teaching Abstract Concepts in High School Physics Especially to Disadvantaged Students <i>Weiss, M.</i>	459
The Use of Film to Modify Mental Skills <i>Salomon, G.</i>	353	Science Teaching Kits as the Material Base for Improvement of Science Education in Indian Schools <i>Care, R. A. and Galakhov, V. J.</i>	465
<b><i>Report of Members: Outcomes of the Third AABE Conference</i></b>		<b><i>Diffusion and Implementation of Use of Educational Technologies</i></b>	
An Integrated Program for Teaching Biology and Agriculture <i>Lev, C. and Adler, J. H.</i>	376	Technology and Evaluation in Biology Education <i>Johri, B. M. and Sinha, U. K.</i>	470
Performance in a Biology Examination of School before and during Participation in a Curriculum Revision Project in Sri Lanka (Ceylon) <i>Eriagama, L.</i>	380	Recent State of Uses of Educational Technology in the Senior High School Biology Education in Japan <i>Nisizawa, K.</i>	478
Consistency of Performance in In-Course Tests and in a Public Examination of Classrooms in a Biology Curriculum Trial <i>James, S. L.</i>	388	Utilization of Technological Means in Teaching Science in General and Biology in Particular <i>Ben-Chanan, M. and Sharoni, S.</i>	483
<b><i>Open University – An Educational Tool</i></b>		Using Animals of Economic Importance in Schools <i>Blum, A.</i>	492
The Organization of the Open University <i>Haynes, L. J.</i>	399	<b><i>Country Reports</i></b>	
Integrated Science and Integrated Teaching Methods <i>Stannard, F.</i>	401	A Review of “Scientific Research Projects in Schools in Singapore” <i>Paran, T. P.</i>	497
Practical Work and Home Experimental Kits <i>Haynes, L. J.</i>	409	A Follow-Up of the Two Philippine Papers Presented during the Third AABE Conference <i>Garcia, F. C.</i>	506
Evaluation of Science Courses at the Open University <i>Moss, G. D.</i>	412	School Biology Research in Sri Lanka <i>Crusz, H. and Weerasinghev, A.</i>	509
<b><i>Individualized Instruction</i></b>		The Role of Marine Microbes in the Nutrification Process <i>Zamora, R.</i>	522
Considerations Regarding Individualized Instructions <i>Mayer, W.</i>	415	Biology Education in Japan 1970 - 1972 <i>Nakajima, Y.</i>	531
Individualized Instruction – Theory and Practice <i>Novak, J.</i>	420	Biology Education in Singapore <i>Paran, T. P. and Natarajan, S.</i>	533
		Education in Israel and Science Teaching <i>Gotlieb, S.</i>	552
		Diffusion and Dissemination of New Curricula	

and Improved Teaching through the Science Education Project <i>Hernandez, D. F.</i>	563	and Solutions <i>Avadhani, P. N.</i>	83
School Biology Education in India – A Survey Report <i>Doraiswami, S. and Guru, G.</i>	573	<b>Methods and Materials</b>	
<b>The Conference</b>		Towards Independence in Learning – an Appraisal of Different Learning Modes to Ideas and Concepts in Biology <i>Tribe, A. A.</i>	90
Conference Programme	579	A Study in Teaching of Environmental Education <i>Nakajima, Y.</i>	104
Addresses, Lecture & Remarks <i>Soriano, L. B.</i>	589	Biology and Biological Materials <i>Rajendram, K. A.</i>	110
<i>Harman, A.</i>	592	Inquiry and Integrated Approaches in Physiology Classes in Secondary Schools <i>Prawirosudirdja, G.</i>	114
<i>Allon, Y.</i>	593	Training Teachers to Teach Science as Inquiry <i>Tamir, P.</i>	119
<i>Elkana, Y.</i>	595	<b>Population Education</b>	
<i>Care, R. A.</i>	606	Growth of Population in the Philippines and the Need for Functional Population Education <i>Kapili, P. H.</i>	133
<b>List of Invited Lecturers</b>	607	The Teaching of Population Biology <i>Dwidjoseputro, D.</i>	146
<b>List of Participants</b>	608	Integration of Population Education in a College Biology Course <i>Garcia, F. C.</i>	153
		The Age of Menarche in Girls in Singapore <i>Nalliah, C.</i>	161
		<b>Rural Education</b>	
<b>&lt; V &gt; Fifth Conference held in Singapore (June, 1974)</b>		Biology Education for Rural Areas <i>Yoong, C. S.</i>	164
Fifth Asian Regional Conference on School Biology		The Biology Curriculum for the Rural School: A Case for Integration <i>Jungwirth, E.</i>	172
<b>Biology Teaching</b>		A Study of the Biotic Relationship between Root Nodule Bacteria and <i>Mimosa pudica</i> : A Suggested Project in for Rural-Urban Schools in Tropical Asia <i>Kwan, L. P. and Nah, C. K.</i>	195
<b>Aims and New Directions</b>		Biology Education in Rural and Urban India: Problems and Prospects <i>Johri, B. M. and Sinha, U.</i>	207
Man and Society: Redirection in Biological Education <i>Chye, Y. O.</i>	1	<b>Evaluation</b>	
The Role of Social Biology and Its Implications for Secondary School Science Teaching <i>Cheah, C. K. and Lee, C. H.</i>	13	Evaluating Curriculum Development in Asia <i>Wong, R. H. K.</i>	210
<b>Curriculum</b>		Evaluation of the Investigatory Project Work Done by a School Biology Group in Sri Lanka <i>Weerasinghe, A.</i>	217
Applied Biology Teaching in Singapore <i>Johnson, A.</i>	31	<b>Country Reports</b>	
Some Problems in Teaching Biology <i>Rao, A. N.</i>	35	RECSAM'S Contribution in Upgrading Biology Education in SEAMEO <i>Ponniah, W. D.</i>	223
Some Problems in Biological Education in Urban Singapore <i>Elliot, A. B.</i>	43	New Approaches to Biology Teaching in Thailand <i>Hormchong, T.</i>	237
A Proposed Syllabus for Teaching Environmental Pollution at Secondary III and IV in Singapore Schools <i>Hong, L. C.</i>	51	The Science Education Project of the	
Teaching of Ecology in Singapore Schools: A Sample Study <i>Tan, J.</i>	57		
Some Problems of Biology and Nature Conservation in Thailand <i>Sirijaraya, P.</i>	61		
Ecology of Naturalized Plants: An Analytical Method for the Study of Vegetation Dynamics as Influenced by Human Impact <i>Odaki, K. and Iwase, T.</i>	64		
Current Changes in Microbiology: A Personal Point of View <i>Leong, T. Y.</i>	74		
The Teaching of Plant Physiology – Problems			

Philippines: 1969 - 1974		Modern Biology Course in Malaysia	
<i>Rimas, G.</i>	245	<i>Ghani, Z.</i>	78
Development and Direction of Elementary Science Education in the Philippines		Teaching Biology in the Context of Culture and Socioeconomic Values of the Country	
<i>Bennett, L. M.</i>	268	<i>Zamora, R. I.</i>	84
Some Patterns of the Attendance of Pupils at the Meetings of a School Biological Investigational Group at Sri Lanka		Development of a Textbook in Biology for Secondary Schools in the Philippines	
<i>Weerasinghe, A.</i>	285	<i>Villavicencio, R. R.</i>	89
A Survey of the Teaching of Biology in Singapore Secondary Schools		The Philippine Science High School Curriculum and its Relevance to the Needs of the Country	
<i>Kwan, L. P. and Singham, J. K.</i>	288	<i>Reyes, V. F.</i>	102
<b>The Conference</b>		The Increasing importance of the Biological Sciences in Today's Society	
Opening Address	301	<i>Lee, A. E.</i>	107
Conference Programme	307	Science Education and the Ecology of Thailand	
Summary of Discussions	313	<i>Carter, J.</i>	113
Summary of Recommendations	329	<b>Teacher Education</b>	
<b>Participants and Committees</b>		Associations and Regional Training Centres - How They Make Biology Training More Effective and Relevant	
Foreign delegates	331	<i>Ramsey, G. A.</i>	116
Local delegates	333	Training of Biology Teachers of Indian Schools	
AABE Executive Committee, 1974	335	<i>Jain, S. C.</i>	124
Organizing Committees	336	Preparation of Teachers for Biology Teaching in Israel	
Coordinators and Rapporteurs	338	<i>Tamir, P.</i>	131
Workshop Sessions	340	The Prospective Biology Teacher and the Philosophy of Science	
		<i>Jungwirth, E.</i>	141
<b>&lt; VI &gt; Sixth Conference held in Bangkok, Thailand (July - August, 1976)</b>		Teacher Retraining and Curriculum Evaluation: Function of the Science Education Center	
Sixth Asian Regional Conference on School Biology		<i>Nakajima, Y.</i>	154
<b>Foreword</b>	i	The Influence of a National Association of Biology Teachers in the Philippines	
<b>Leading Papers</b>		<i>Garcia, F. C.</i>	164
Preparation of Teachers for Biology Teaching		Quality versus Quantity in Preservice and Inservice Teacher Education Programmes with Special Emphasis on Biology: A Point of View	
<i>Vohra, F. C.</i>	1	<i>Singham, J. K.</i>	173
Educating Teachers as Researchers and Curriculum Developers		<b>Learning Materials</b>	
<i>Kelly, P. J.</i>	18	Using More Living Organisms in Biology Education	
How Are the Teacher Curriculum and Training Strategies Made Relevant for Biology Teaching?		<i>Imahori, K.</i>	183
<i>Yoong, C. S.</i>	26	Supply and Preservation of Living Materials for Pupil Exercises	
The Concept of Competency in Teacher Training Courses		<i>Koshida, Y.</i>	187
<i>Hernandez, D. F.</i>	38	Inexpensive Equipment for High School Biology	
<b>Participants' Papers</b>		<i>Pavanarit, S.</i>	191
<b>Curriculum and Instruction</b>		<b>Evaluation</b>	
Restructuring School Biology - Relevance and Consequences of New Approaches for Biology Teaching and Teacher Training		The Development of Instruments to Determine the Teacher's and Student's Classroom Activities and Attitudes toward the IPST Biology Program	
<i>Kattmann, U. and Schaefer, G.</i>	47	<i>Soydhurum, P.</i>	196
IPN Unit Bank Biology - A New Type of Teacher Training		Evaluation of IPST Biology Curriculum	
<i>Schaefer, G. and Kattmann, U.</i>	60	<i>Padungratana, J.</i>	203
Cell Biology in Secondary Schools in Relation to the New Trends in Indian Education			
<i>Mishra, A. K.</i>	72		
The Development and Implementation of the			

<b>The Conference</b>			
Welcome Address: <i>Krishnamra, T.</i>	207		
Opening Address: <i>Vangsayanha, C.</i>	209		
Conference Director's Report: <i>Hormchong, T.</i>	211		
The Conference Programme	214		
Summary of Discussions	220		
Summary of the Conference	242		
Organizing Committee	244		
Participants	246		
<b>&lt; VII &gt; Seventh Conference held in Kuala Lumpur, Malaysia (December, 1978)</b>			
<b>Multidisciplinary Biology Education Relevant to Community Development</b>			
<b>Preface</b>	vii		
<b>Opening Ceremony</b>			
Welcoming Address: <i>Hamiddon, F.</i>	xi		
Opening Address: <i>Jafaruddin, T. H. S.</i>	xiii		
Message: <i>Vohra, F. C.</i>	xvii		
Address: <i>Yoong, C. S.</i>	xxiii		
<b>Conference Papers</b>			
<b><i>Developments in Multidisciplinary Biology Education</i></b>			
Biology in Community Education: Philippine Scenario for Lifelong Education <i>Hernandez, D. F.</i>	5		
Problems on Biological Curricula Relevant to Inter-, Uni-, and Multi-Disciplines <i>Imahori, K.</i>	27		
Moral Education: Implications for Biology Teachings <i>Kanagasabai, S.</i>	33		
Interdisciplinary Science: Pros and Cons, Trends and Examples <i>Lee, A. E.</i>	41		
Population Education and Birth Planning Studies: A Project Design for Hong Kong and the Southeast Asian Regions <i>Marsh, A. R.</i>	57		
Curricular Innovations and Priorities in Biology Education: A case for the Developing Countries <i>Sood, J. K.</i>	71		
Biology in Environmental Education <i>Stokes, D. M.</i>	79		
Concepts in Social Biology <i>Ghani, Z.</i>	87		
<b><i>Multidisciplinary Biology Education for Schools and Tertiary Institutions</i></b>			
A Preliminary Study of Fouling Organisms of Johore Straits and the Extent of Pollution in the Region <i>Charles, S.</i>	97		
Curricular Aspects in Multidisciplinary Biology Education in Malaysia Relevant to Community Development <i>Prabhakar, M. P.</i>	105		
A Nature Study Centre in Taman Negara (West Malaysia) for Use by Student Groups <i>Rubeli, K.</i>	121		
A Child-Centred Approach to Biology Education in Indonesia <i>Wayan Seregeg, G.</i>	137		
Recognising the Need for a Multidisciplinary Biology Education <i>Chou, L. M.</i>	153		
Biology in Adult Education <i>Cocude, M.</i>	157		
Integrated Science Education for College Students in Japan <i>Koshida, Y.</i>	163		
Multidisciplinary Biology at the Tertiary Level with Special Reference to the University of Malaya <i>Kuthebutheen, A. J.</i>	171		
Biology Education in the Open University of Thailand <i>Phettongkam, M.</i>	187		
A Proposed Biology Syllabus and Scheme of Work for Integrating Diverse Disciplines of Pure, Applied and Philosophical Biology at First Year Level in Post Secondary Educational Streams <i>Santiago, A.</i>	191		
The Role of the Teacher in Multidisciplinary Biology Education with Special Reference to Environmental Approach <i>Perrott, E.</i>	207		
Community Based Resource Materials for Improving Competence of Biology Teachers <i>Savellano, J. M.</i>	223		
<b><i>Environmental Issues and Education</i></b>			
Environmental Education: A Strategy in Development <i>Chelliah, T.</i>	233		
Ecological Education for Community Development <i>Furtado, J. I.</i>	243		
Aspects of Food, Health and Nutrition Problems and their Relevance to Biology Education <i>Gnanamuthu, E.</i>	255		
Education and Environmental Needs in Malaysia <i>Singh, G.</i>	271		
Education against Race Prejudices as a Topic of Biology Education <i>Kattmann, U.</i>	277		
Natural Environmental Educational through Japanese Monkeys <i>Kawasaki, T.</i>	295		
Conversation Education in Malaysia <i>Heang, K. B.</i>	313		

The Environmental Crisis and the Potential Role of Biology Education in Combating It <i>Peng, K. K.</i>	317	<i>Tamir, P.</i>	81
<b>The Conference</b>		Use of Living Organisms for Laboratory Work in Biology Education <i>Kanagasabai, S.</i>	95
Asian Association for Biology Education Executive Committee	325	A Survey Project to Search for Potentially Teachable Biological Materials from the Regions of Thailand <i>Chantharasakul, V.</i>	105
Organising Committees	326	The House Gecko as a Useful Specimen for Field and Laboratory Work <i>Chou, L. M.</i>	113
Conference Programme	329	Use of <i>Gibasis Geniculata</i> as Live Teaching Material <i>Shigenobu, Y.</i>	117
List of Participants	333	A Simple Analysis of Laboratory Microecosystems by BCP Agar Method <i>Ueda, H.</i>	125
Acknowledgements	343	Green- and Yellow- Euglena as an Educational Biomaterial <i>Shihira-Ishikawa, I.</i>	131
		Bring Nature into Your Classroom – Simple Way to Culture Organisms <i>Yamada, T. and Yamagiwa, T.</i>	135
<b>&lt; VIII &gt; Eighth Conference held in Osaka and Gifu, Japan (October - November, 1980)</b>		Ecological Adaptation of <i>Rhodeus ocellatus</i> and Their Use as a Teaching Material <i>Kawasaki, T.</i>	145
Biology Education for the Next Decade		Observation of Mitotic Division and DNA in Root Tip Cells <i>Chouhdry, A. S., Tanaka, R. and Yonezawa, Y.</i>	155
<b>Linking Biology to Social Studies</b>		Simplification of Gasmetry for Measuring Respiration and Photosynthesis <i>Yokohama, Y., Katayama, N. and Furuya, K.</i>	159
Biological Education in a Changing World <i>Kelly, P. J.</i>	1	<b>Environmental Education</b>	
Coordination between Biological Tents and Sociobiology <i>Rao, A. N.</i>	7	Environmental Education in Japanese Schools <i>Numata, M.</i>	167
Some Aspects of the Socialization of Teachers and Students of Biology <i>Jungwirth, E.</i>	17	On the Way Wild and Domesticated Plants and Animals are Treated in an Elementary Science Textbook Authorized in Japan - An Issue from the Standpoint of Environmental Education <i>Hiroki, M.</i>	173
Integrating Some Topics in Biology to Social Studies <i>Villavicencio, R. R.</i>	26	A Field Study on Biological Education in Elementary School <i>Taniguchi, H., Shimizu, J. and Sato, K.</i>	179
Thought of an Educational Module on Biology and Human Values in Sri Lanka <i>Basnayake, V.</i>	41	Environmental Problems and Orientations – A Malaysian Case Study <i>Yoong, C. S.</i>	189
Some Thoughts on Biological Education for Community Development <i>Atchia, M.</i>	47	A General Comparative Method for the Development of Field Project in Contrasted Habitats <i>Meyer, R. G.</i>	199
Utilization of Zoological Museum and Marine Aquarium for Instructional Purposes and for Laboratory Works <i>Hormchong, T.</i>	53		
Adaptation of the Individual and the Species to the Environment: A Principle Common Both to Biology and Social Sciences <i>Morimasa, S.</i>	55		
The Study of Environmental Education in Seventies <i>Satofuka, F.</i>	61		
<b>Using Living Organisms for Field Study and laboratory Work</b>			
Living Organisms in Biology Education <i>Vohra, F. C.</i>	63		
Introduction of the “living Materials Study Group (LMSG)” and Its Activities <i>Yamagiwa, T.</i>	75		
Attitudes of Secondary School Students in Israel towards the Use of Living Organisms in the Study of Biology			

Biology Education in the 1980s <i>Kennedy, M. H.</i>	215	<i>Rao, A. N.</i>	419
Biological Education towards the Year 2000 <i>Tamir, P., Adler, J. H, and Poljakoff-Mayber, A.</i>	229	Study on Recognition System for Handwritten Letters <i>Fujii, K. and Morita, T.</i>	425
Trends in Biological Science Education in Japan and the U. K. <i>Kille, R. A.</i>	239	<b>Conference</b>	
Biological Education As It Ought to Be in Future <i>Tate, T.</i>	251	Opening Address: <i>Imahori, K.</i>	433
New Trends in Biological Education in Kuwait <i>Subbarini, M. S.</i>	255	Welcoming Address: <i>Kelly, P. J.</i>	435
The Concepts of "Health" and "Environment" in Future Biology Teaching <i>Schaefer, G.</i>	259	Greetings: <i>Yoshiki, M.</i>	437
The Education of Biology Teachers: Retrospect and Prospect <i>Sood, J. K.</i>	277	Greetings: <i>Ootsuka, H.</i>	439
The Biology Teacher, A Moral Force <i>Dwidjoseputro, D.</i>	285	Closing Address: <i>Nakayama, K.</i>	441
Study on Three Kinds of Instructive Media <i>Nakajima, Y.</i>	289	Proposed Recommendations of the Conference	442
The Curriculum of Biological Education in the National Teacher's Colleges and Educational Departments of Universities in Japan <i>Tara, M.</i>	295	List of Participants	444
Towards Achieving the Central Objectives of School Science Practical Work <i>Leong, T. Y.</i>	323	Acknowledgements	451
Biological Subjects taken up in the Interdisciplinary Courses at Chiba University <i>Tamanoi, I., Yoshida, O., Fukuda, Y. and Kobayashi, K.</i>	337		
Illustrated Stamps As a Teaching Aid for Field and Laboratory Studies <i>Katayama, N., Kitano, H. and Kobayashi, H.</i>	345	<b>&lt; IX &gt; Ninth Conference held in Melbourne, Australia (December, 1982)</b>	
Marine Biology Courses of College Education in Japan <i>Koshida, Y.</i>	363	The Role of Biology Education in Enhancing the Quality of Life	
<b>Educational Technology and Biological Technology</b>		<b>Information Provided for Conference</b>	
Introducing Educational Technology into the Classroom –Towards Biology Education in 1980s <i>Nakayama, K.</i>	373	<b>Participants</b>	1
Role and Problems of Educational Technology in an Open University in Thailand <i>Puriveth, S.</i>	391	<b>Presented Papers</b>	
VTR Student Practice for Nerve Impulse Conduction with an Electronic Neuron Model <i>Homma, S. and Mizota, M.</i>	397	Biological Conservation <i>Sirijaraya, P.</i>	8
Biological Technology <i>Vohra, F. C.</i>	405	Fieldwork on Invertebrate Zoology in the Gulf of Thailand <i>Chullasorn, S.</i>	14
Biological Technology		The Biology Program at a Japanese Women's University <i>Kimura, I.</i>	24
		Genetics and Life in Thailand <i>Saksoong, P.</i>	26
		Biology Courses at National Universities in Japan <i>Koshida, Y.</i>	27
		Biology Education and Quality of Life: A Malaysian Case Study in Teacher Preparation <i>Chelliah, T.</i>	34
		Teaching Health through Biology Education <i>Hernandez D. F.</i>	49
		Biology Education in a Developing Country <i>Dwidjaseputro, D.</i>	69
		Health Education in Biology and the Quality of Life <i>Imahori, K.</i>	77
		Ecological Training on Secondary Succession at the School Campus <i>Odaki, K.</i>	92
		Biological Investigations and Field Work on Boso Peninsula in an Interdisciplinary Course <i>Yoshida, O. Tamanoi, I., Fukuda, Y. Kobayashi, K., Nishino, E., Nogawa, H. and Asai, N.</i>	106
		Teachers' Group Activities for Promotion of Teaching Genetics at the Senior High School	

<i>Hatakeyama, T.</i>	118	Culture of Setae and Induction of Polyploid Mutant – A Simple But Useful Tissue Culture of Plant for High School Students	
How to Cultivate Efficient Ways of Laboratory Exercises in Biology		<i>Yonezawa, Y.</i>	117
<i>Tamanoi, I., Yoshida, O., Fukuda, Y., Kobayashi, K., Nishino, E., Nogawa, H. and Asai, N.</i>	119	<i>Vorticella</i> sp., an Example of Cell Motility	
Educational Uses of Wild Flowers with Special Reference to Out-door Biology at Elementary School Level in Japan		<i>Phanichyakarn, V. and Cherdshewasart, W.</i>	128
<i>Katayama, N.</i>	130	Study on Inhabitable Place of Mammals in Gifu Prefecture (Central Part of Japan) and Mammal's Life	
New Systematic Structure of Biology Education		<i>Kawasaki, T.</i>	137
<i>Tate, T.</i>	164	Thinking Logically – A Prerequisite for Pupils' Research Project	
The Educational Uses of a Braconid Wasp, <i>Apanteles glomeratus</i> L. with Special Reference to Ethology Teaching		<i>Jungwirth, E.</i>	148
<i>Kitano, H. and Kawahara, H.</i>	169	The Importance of Biological Research on Traditional Culture	
<b>List of Participants</b>	183	<i>Tate, T.</i>	161
		Research on Australian Mammals – A Low Technology Approach	
		<i>Wallis, R. L. and Brunner, H.</i>	166
		Biology Research Project for High School Students	
		<i>Prakobvitayakit Beaver, O.</i>	183
		Cultivation of Seaweed and Measurement of Its Photosynthetic Activity Using the Improved Productmeter, As a Laboratory Exercise for Upper Secondary School Biology	
		<i>Katayama, N., Tokunaga, Y., Furuya, K. and Yokohama, Y.</i>	187
		A Project for Study on Bird Biology through Nature Observation	
		<i>Wilasdachanont, W., Isarankura, K. and Sirijaraya, P.</i>	207
		The Biology in a Women's University	
		<i>Kimura, I.</i>	219
		Biology in the Future – Some Trends in Biology Research and Their Implications for Biology Educator	
		<i>Wallis, R. L.</i>	225
		<b>Final Report on the 10th AABE Conference</b>	
		<i>Chiowanich, P.</i>	233
		<b>Organizing Committees</b>	237
		<b>Conference Programmes</b>	241
		<b>List of Participants</b>	251
		<b>&lt; XI &gt; Eleventh Conference held in Quezon City, Philippines (December, 1986)</b>	
		Research and Evaluation in Biology Education and Its Implication for the Teachers	
		<b>Foreword</b>	ix
		<b>Biology Research and Implications to Teaching</b>	
		Free Radical Biology and Xenobiotic Biotransformation: A Possible Mechanism of Pesticide Toxicity	
		<i>Andaya, A. A.</i>	3

Experimentants of "Functional Response" of Some Fish Species for Practical Application Population Ecology <i>Prakobvitayakit Beaver, O.</i>	11	<b>New Programs, Courses and Materials</b>	
Research Developments in Cell Biology – Implications to Applied Fields and to Biology Education <i>Grimme, H. L.</i>	15	Postgraduate Programs in Biology for Teachers in Thailand <i>Chiowanich, P.</i>	207
Mammalian Field Studies Using Indirect Methods <i>Wallis, R. L.</i>	23	The Research Program of the PSHS Curriculum <i>Cruz, J. M.</i>	215

**Country Reports**

Biology Education Report - Australia: A Case Study in the Use of Biology in a Multidisciplinary Tertiary Education Course <i>Wallis, R. L. and Baskaran, K.</i>	12
Biology Education at the Secondary and Pre-university Level in Hong Kong - A Brief Report - <i>Tang, P. L.</i>	20
The Current Status of Biology Education in Korea <i>Chang, N.-K., Park, I.-K., Rim, Y.-D., Kang, H.-K. and Cho, J.-I.</i>	35
Biology Education in the Philippines: An Update <i>Joaquin, C. C.</i>	44
Biology Teaching to Non-biology Majors in Japan: Before and after the Recent Curricular Innovation of Colleges and Universities <i>Koshida, Y.</i>	54
<b>Contribution Papers</b>	
A Long Term Experiment in Ecology: The Effects of Logging and Fire on Mammals in an Australian Forest <i>Wallis, R. L.</i>	60
The Population Changes of the Japanese Black Bear in Gifu Prefecture and the Opinions of Area Residents concerning Them <i>Kawasaki, T.</i>	67
Environmental Education – Learning through Action: A Multisectoral Approach (An Experience Report) <i>Schwettmann, K. D.</i>	75
Practice of Biology Education in the Experimental Plantation <i>Tara, M.</i>	80
Interpreting Our Natural Heritage in the Malaysian Tropical Rainforest and Coral Reef through Slide Program: A Case Study for 6th Grade Pupils in a Japanese Elementary School <i>Kitano, H.</i>	88
The Concept and the Method of Environmental Education and the Way of Their Application: “The Kushiro Marsh Plan” <i>Ubukata, H.</i>	91
A Historical Study on the Genetics Education in Japanese Secondary School Biology Subject Matters <i>Ikeda, H.</i>	98
New Science Curricula for Non-Science Course in Upper Secondary Schools <i>Umeno, K.</i>	103
Revolutionary Change in Biological Education at Nihon Daigaku College of Law by Adapting to New Curriculum <i>Sudzuki, M.</i>	111

The Environment and Reproductive Rhythms in Mammals <i>Tang, P. L. and Chan, S. T.</i>	120
A Study on the Effect of a Molecular Movement Based Instruction on Understanding of Diffusion and Osmosis and on Scientific Attitude <i>Cho, J.-I.</i>	135
<b>Poster Presentations</b>	
How Much Knowledge the University Students Have of the Trees on Campus <i>Takeuchi, K., Umeki, S. and Matsuka, M.</i>	143
Comparison of Biology Curriculum for Upper Secondary Schools between Myanmar and Japan <i>Hiroki, M. and Ciin, N. K.</i>	149
A Study on the Cognition of Natural Environment of High School Students in Japan and Korea <i>Fujishima, H. and Ka, H.</i>	157
Cognitive Functions of Two Hemispheres and Biological Education <i>Kang, H.-K. and Rim, Y.-D.</i>	162
The Analysis of Environment-relating Texts and the Personalization of Environment in the Environment Education <i>Chang, N.-K., Lee, J. E. and Park, M.</i>	170
Time-lapse-video Display for the Intuitive Understanding of Plant Motility <i>Shihira-Ishikawa, I., Furukawa, T., Ohsu, T., Hosokawa, S., Makita, N. and Sugiyama, Y.</i>	179
A Video Program Showing the Procedure for Collection and Observation of Diatoms Used for Evaluation of River Water Quality <i>Mayama, S., Ueyama, S., Mayama, N. and Kobayasi, H.</i>	184
Semi-individualized Instruction for Students’ Activities <i>Fukuda, H., Shimizu, K., Sato, Y. and Murasugi, S.</i>	190
A CAI (Computer Aided Instruction) Program and a Video Program, Terms of Biology and Its Use for Teaching Biology in High School <i>Kaga, T.</i>	197
How to Obtain Protista Available for Biology and Environmental Education at School: Cultivation of <i>Volvox</i> and <i>Paramecium</i> <i>Mikami, K., Igari, T. and Oka, K.</i>	203
An Examination of a Freshwater Filamentous Green Alga <i>Rhizoclonium riparium</i> for the Development of Experimental Materials for Teaching Photosynthesis <i>Imai, M. and Katayama, N.</i>	211
3-Dimensional Algal Specimen Is an Useful Teaching Material in Biology Education <i>Misonou, T. and Rinno, M.</i>	216

Leaf Skeletonizing – A Practical Way to Livelihood Education through Science and Technology <i>de la Torr�, R. U.</i>	222
Laboratory Exercises Using a Japanese Ladybird, <i>Propylea japonica</i> , for Teaching “Reproduction” and “Heredity” in Junior High School Science <i>Kanaizuka, Y. and Katayama, N.</i>	225
A Simple Volumetric Method for Measuring Photosynthesis and Respiration Rates even at Home <i>Takaoki, T.</i>	231
Improvement of Indigo Carmine Method at the Experiment of the Photosynthesis in Science Education <i>Jinno, N. and Fujita, T.</i>	239
On the Use of the Greenbelts at School Grounds <i>Park, I.-K.</i>	245
UST Mangrove Tree Planting: A Model for an Outdoor Class Activity in Environmental Biology <i>Duque, S. M. and Madulid, R.</i>	253
Education for the General Public on Marine Biology with the South-Izu Marine Ecology Society (S.M.E.S.): Observation Activities of Marine Organisms by Snorkel Diving <i>Hirata, T., Aoki, M., Kurashima, A., Dasai, A. and Yokohama, Y.</i>	258
<b>Abstracts</b>	
Biology Teaching to Non-biology Majors through Out-of-school Education – The Role of Youth Environmental Non-governmental Organizations <i>Hili, C.</i>	264
Biology Course for Non-biology Majors at Chiang Mai University <i>Sukchotiratana, M.</i>	264
Biology Teaching to Undergraduate and Post-graduate Engineering Students - A Personal Experience - <i>Tang, P. L.</i>	265
An Educational Use of a Braconid Wasp, <i>Cotesia (= Apanteles) glomerata</i> (L.) in High School Biology <i>Kawahara, H.</i>	265
The Winning Works of the 10th Annual Nature Trail Contest in Japan <i>Saitoh, M.</i>	266
<b>Workshop</b>	
A Student Activity for Nature Conservation in Tokyo Gakugei University <i>Katayama, N.</i>	267
<b>List of Participants</b>	268
<b>Executive Committee Members</b>	275
<b>Acknowledgements</b>	276

<b>&lt; XVI &gt; Sixteenth Conference held in Chang Mai, Thailand (December, 1996)</b>	
Excellence in Biology Teaching: Research, Practice and Experience	
<b>Welcome Address:</b> <i>Sukchotiratana, M.</i>	1
<b>Opening Address:</b> <i>Teetranont, C.</i>	2
<b>30th Anniversary of AABE Speech:</b> <i>Koshida, Y.</i>	4
<b>Plenary Lectures</b>	
Experience in Practice and Research Lead to Excellence in Biology Teaching <i>Hormchong, T.</i>	6
Teaching Ecology through Environmental Issues: A Workshop Example in Thailand <i>Tilling, S. M.</i>	10
The Use of Lichens as Indicators of Environmental Change in Seasonal Tropical Forests of Northern Thailand: A Workshop Using Simple Techniques for Sampling Lichen Communities <i>Wolseley, P.</i>	31
<b>Country Reports</b>	
Teaching and Learning Environmental Science in Schools of Thailand <i>Boonklurb, N.</i>	44
Biology Education in the Philippines: Prospect and Retrospect <i>Angtuaco, S. P.</i>	48
Current Status of Biology Education at the Primary and Secondary Levels in Japan <i>Katayama, N.</i>	53
Quality in Teaching and Learning – The Australian Universities’ Experience <i>Wallis, R. L. and Boyd, B.</i>	69
<b>Contribution Papers</b>	
Enhancing the Development of Thinking Skills and Critical Thinking among Students of Natural Sciences <i>Hafalla, J. R.</i>	76
Biology Education by VTR and Field Works <i>Tara, M.</i>	81
Integrating HIV/AIDS Concepts in a Basic Biology Curriculum <i>Gregorio, L. C.</i>	87
Laboratory Exercises Using a Red Alga, <i>Gigartina mamillosa</i> , for Teaching Photosynthesis of Seaweeds in Junior High School Science <i>Kanaizuka, Y. and Katayama, N.</i>	92
Management of <i>Dalbergia sisso</i> Roxb, in Farm Conditions Using Different Pruning Intensities <i>Kafle, S. K. and Dixit, P. M.</i>	102
Australia’s Largest Owl. Diet and Conservation of Powerful Owls in the Yarra Valley <i>Wallis, R. L.</i>	112

Seventh Grade Students' Informal Theories of Horn-Beetles <i>Hirata, A.</i>	118	<b>Executive Committee Members</b>	233
Frog Culture for Biology Study and Biological Research <i>Na Nagara, S.</i>	124	<b>The Asian Association for Biology Education (AABE): Constitution and Rules</b>	242
Where and How to Collect the Small Benthic Marine Invertebrates <i>Chullasorn, S.</i>	127	<b>&lt; XVII &gt;Seventeenth Conference held in Manila, Philippines (December, 1998)</b>	
Inquiry into the Cell <i>Nakamichi, T.</i>	134	Biology Education in the Third Millennium	
Analysis or the Discriminatory Capacity of Questions in University Entrance Examinations in Japan <i>Koshida, Y., Maekawa, S. and Shimizu, T.</i>	141	<b>Message: Editors</b>	i
Repellency Effects of Neem and Synthetic Pesticides to Honeybees <i>Thapa, R., Wongsiri, S. and Prakobvitayakit, O.</i>	147	<b>Message: Kanapi, C. G.</b>	ii
Comparative Study on the Learning Achievement in Biology Course 045: Genetic Materials and Protein Synthesis of Mathayomsuksa 6 Students Focusing on the Use of Teaching Protein Synthesis* Magnetic Board during Teaching Process <i>Piriyakul, K.</i>	153	<b>Keynote Address</b>	
Some Biological Investigation of Larval Trematodes from Chiang Mai Moat <i>Wongsawad, C., Wongsawad, P., Suvattanacoupt, S. and Sukchotiratana, M.</i>	157	Biology Education in the Third Millennium: Focus on Information Technology and Environmental Education <i>Padolina, W. G.</i>	1
Helminthological Survey of Rats from Urban Area of Chiang Mai <i>Namue, C. and Wongsawad, C.</i>	172	<b>Inspirational Talk</b>	
Mt. Kwangdok as a Nature Trail <i>Park, I.-K. and Rim, Y.-D.</i>	184	Foundation and Development of the Asian Association for Biology Education <i>Imahori, K.</i>	5
Pteridophyte Comparison in Different Forest Types at Doi Lohn, San Kampaeng District, Chiang Mai Province <i>Bañoc, L. M., Maxwell, J. F., Elliott, S. D. and Anusarnsunthorn, V.</i>	190	<b>Plenary Papers</b>	
Change of Nature Environment and Biological Education <i>Fujishima, H.</i>	197	Biology Education in the Third Millennium: Focus on Information Technology and Environmental Education <i>Madrazo, G.</i>	7
The Effect of Benzocaine in the Transpiration of <i>Oreochromis niloticus</i> Linn. and <i>Chanos chanos</i> Forskal <i>Sommani, A., Kerkriengkai, S. and Srisangngam, S.</i>	202	Biology Education at Risk <i>Imahori, K.</i>	12
A Proposition to the International Solidatory of Environmental Education in Asia-Pacific Area <i>Saitoh, M.</i>	208	IT-Aided Adult Environmental Education <i>Suselo, T.</i>	16
Study of Marine Actinomycetes and Their Roles in Marine Microcosm <i>Srivibool, R.</i>	216	Biology of Dicyemid Mesozoans with Notes of Their Educational Use <i>Koshida, Y., Furuya, H. and Tsuneki, K. A.</i>	25

## Publications

*Biology Education for Social and Sustainable Development* (ISBN: 978-94-6091-925-1) was published in 2012 by Sense Publishers, Rotterdam, Netherlands (<http://www.sensepublishers.com/>). Some papers presented at the **23rd Biennial Conference of the AABE** which was held in Singapore in October 2010 were compiled in this book by Dr. Mijung Kim and Dr. C. H. Diong. You can refer to the abstracts of these papers in **the sixth volume of the *Asian Journal of Biology Education*** (2012).

*Biology Education and Research in a Changing Planet (2015)* (ISBN 978-981-287-523-5) was published by Springer (<http://www.springer.com/in/book/9789812875235>). Some papers presented at the **25th Biennial Conference of the AABE** which was held in Malaysia in October 2014 were compiled in this book by Dr. Esther Gnanamalar Sarojini A Daniel. The abstracts of these papers were included in **the eighth volume of the *Asian Journal of Biology Education*** (2015).

### From the Editor-in-Chief

The tenth volume of *Asian Journal of Biology Education* (AJBE) contains one practical report and one country report. It also contains the contents of past conference proceedings (Vol. 1 – 17). Although this volume is a little thinner than the previous ones of AJBE, I have decided to publish it because one article included was accepted for publication more than a year ago, in March last year.

The next issue will be published possibly by the end of April, next year. It will include a report on the 27th Biennial Conference of AABE which will be held at Emerald Hotel Bangkok, Thailand, from the 30th of November to the 2nd of December this year, and the abstracts of papers presented at the conference, as well as some contributed articles.

One of the roles of AJBE is to report the latest biennial conference of AABE. However, the core object of AJBE is to publish reports on biology education research and practices. So, the publication of AJBE is mainly dependent on the number of contributed articles. Therefore, I would like to ask the readers of this journal, AABE members or non-members, to submit their articles (research papers, practical reports, reports on biological resources, etc.) to AJBE.

The articles contributed to AJBE during the last two years have been reviewed by Professor Kim Kyounggho (Gongju National University of Education, South Korea), Professor Morakot Sukchotiratana (Chiang Mai University, Thailand), and Dr. Robert Wallis (Federation University, Australia), as well as the Editorial Board members. I am very thankful to them for their efforts to review the articles.

**Dr. Nobuyasu Katayama**
