

THE HOT LIST

WE ARE GETTING BETTER. And equipment technology is the reason. Either that or we're in the midst of one of the most curious coincidences in the 500-year history of our game. First, to the evidence about us. The USGA is unequivocal about average golfers: Despite decades of naysayers and experts alike suggesting that the average handicap is not dropping, has not dropped and never will drop, the fact is, it has. Let's say that again: *The average handicap of all golfers—men, women and children—has decreased consistently for the past 15 years.* The average handicap today is two strokes better than it was in the early 1990s, according to research provided to Golf Digest by the USGA's Golf Handicap & Information Network (GHIN). This decrease coincides with a remarkable decade of equipment innovation that has brought us titanium drivers in every shape and size, game-changing hybrids and oversize putters. →

THE SHAPES
EVOLUTION OF IMPROVEMENT

TaylorMade Burner Plus: 144 cubic centimeters, hollow stainless-steel casting filled with foam

TaylorMade TI Bubble 2: 278cc, titanium casting with springlike effect

TaylorMade R580XD: 440cc, titanium casting with separate titanium face insert

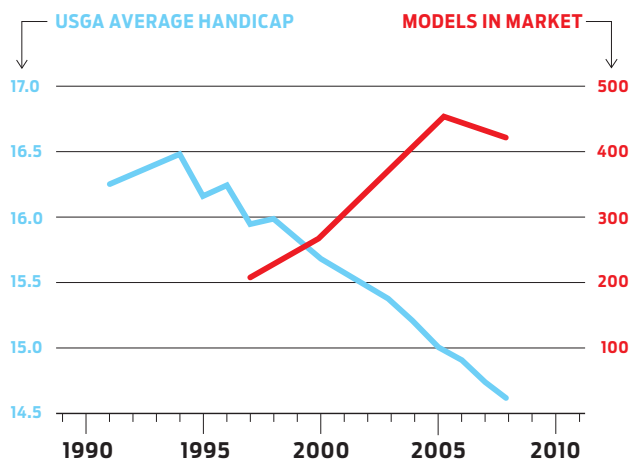

TaylorMade Burner: 460cc, titanium casting with 45 percent thinner walls than TI Bubble 2

→ Those clubs and others like them have been introduced in record numbers the past dozen years. All because a lot of smart people have come to golf with ideas to make the game easier. Consider that the number of products tracked by Golf Datatech, an industry-research firm, has more than doubled since 1997, and equipment submissions to the USGA have gone from about 500 a year in the early 1990s to almost 2,500 in 2008. One reason for that increase is that the USGA evaluates more products for rules conformance, but all those new products and improvements can't be unrelated.

What's that, you say? Your handicap hasn't budged since the first Bush Administration? Maybe the problem is that the contents of your golf bag haven't changed. Oh, sure, we've heard the familiar protests: "I'm not good enough," "None of this stuff really helps average golfers that much" and our favorite: "I'm doing just fine with what I've got."

Not really. Or at least you could be two shots better. For those of you who need further convincing, we present the

THE TRUTH
MORE CLUB CHOICES=LOWER HANDICAPS

Coincidence? We think not. Handicap data provided to Golf Digest by the USGA (the blue line in the chart) shows a decrease in the average Handicap Index for men from 16.5 in 1994 to 14.6 in 2008 (the drop for women during this time went from 29.9 to 27.4). That coincides with the greatest expansion in golf technology in history. Annual equipment submissions to the USGA's Research and Test Center have nearly quintupled since the mid-1990s, and the number of products being tracked by research firm Golf Datatech has doubled (the red line in the chart). In 1997, there were 217 clubs and balls on its list. In 2008, there were 454, down slightly from a high of 475 in 2005.

MIKE STACHURA

Golf Digest Hot List. Our annual equipment review and analysis has yielded 116 exceptional products in 12 categories, the most exhaustive review ever of the game's top clubs.

What we've learned over the years is that new equipment is designed to help average players more than tour players, and the engineers behind golf's new technologies can explain in detail how they're making improvement happen.

"Golfers have gotten better because new equipment helped make it easier to produce adequate launch conditions," says Benoit Vincent, chief technical officer at TaylorMade. "New equipment also has allowed golfers to maintain adequate launch conditions for bad shots and to maximize launch conditions with their best swings when custom-fit."

The game can be made easier. Not easy, mind you, but easier, and probably easier than it has ever been. (Of course, golf courses are getting longer and more difficult, so for many of us it might not seem like we're improving. But take a trip back to that munny where you grew up, and see if you aren't driving to places you did in your youth or even farther.)

Technology update. This year's technological advances

THE AWARDS

GOLD products earned a score of 93 to 100 on our weighted scale. **SILVER** products earned a score of 88 to 92.99. For example, a product scoring 94 in Performance, 91 in Innovation, 96 in Look/Sound/Feel and 86 in Demand would earn a weighted score of 92.7, or Silver status. There was no minimum number of stars required to earn Gold or Silver status.

THE RATINGS

The star ratings are meant to reflect the various levels of judges' scoring from Poor to Outstanding. Each star represents a scoring range, with a 1/2-star generally equal to the upper end of a particular range. For example, scores in the 93 to 96 range represent a score of ★★★★★½. Products that led the scoring in a particular criterion are designated with a circled blue star. If a product is also available in a women's-specific model, it's tagged with a "W" in a pink circle.

★	Less than 50
★★	51 to 69
★★★	70 to 87
★★★★	88 to 96
★★★★★	97 to 100

★ CATEGORY LEADER

W ALSO IN WOMEN'S

THE CATEGORIES

To get on our final list, candidates for the Hot List were judged in four weighted criteria by our five judges.

- 1. PERFORMANCE (40%)**
Based on interviews with our player panelists, robot testing and other sources, the judges assessed the utility of each product. In other words, this is a grade of what happens to the ball when it's struck by the club.
- 2. INNOVATION (30%)**
In consultation with our technical panel and based on company interviews and our review of company technical documents, this grade reflects how a particular technology advances the category in all aspects, to what degree the commitment to fitting the vast majority of golfers is executed, and how that technology is explained to the public and to our editors.

- 3. LOOK/SOUND/FEEL (20%)**
Exactly what it says. Our judges evaluated the relative excellence of the visual, auditory and tactile experience of using a particular club. The more the club resonates with our understanding of what a golf club should be, the higher the grade it receives.

- 4. DEMAND (10%)**
An assessment of the reputation, interest, intrigue and excitement about a particular product, considering market presence, tour use, relative value and consumer satisfaction through consulting research by Golf Datatech, other published resources and a panel of leading retailers.

THE NUMBERS

Golf Digest measured all sample clubs using digital calipers and a digital planimeter. Measurements of moment of inertia in drivers were collected in partnership with the Department of Physics at Gordon College in Wenham, Mass. (HIGH MOI = 4,000-4,699; VERY HIGH = 4,700-5,299; EXTREME = 5,300+)

IRONS

DRIVERS/WOODS/HYBRIDS

Independent robot testing for **DRIVERS** was conducted by Golf Laboratories Inc. of San Diego. The launch angles and spin rates are designated on these scales, relative to the field of drivers tested. The lofts were chosen based on a 95-miles-per-hour clubhead speed, per the manufacturers' recommendation. Of the 31 drivers tested, launch angles ranged from 9.2 to 13.8 degrees, and spin rates ranged from 2,300 to 3,600 revolutions per minute.

go a step beyond engorged drivers and ridiculously strong-lofted irons. Drivers, for example, feature the performance properties of extreme geometries within a more pleasing, almost traditional frame. The best iron designs reflect a pattern of optimizing each individual iron within a set based on how a player might best use it. Companies, for instance, are designing 7-irons significantly different from 4-irons, even within the same set.

Most important, fitting has become nearly automatic, thanks to adjustable fitting systems and the virtual omnipresence of launch monitors. It's so vital (and no doubt related to our two-stroke improvement) that we're beginning every section of the Hot List with a golf success story based on a proper fitting.

Of course, in the onrush of the present, we sometimes lose sight of how much progress is being made. Golf has benefited from technological leaps the past dozen years, but in real time they can seem like baby steps.

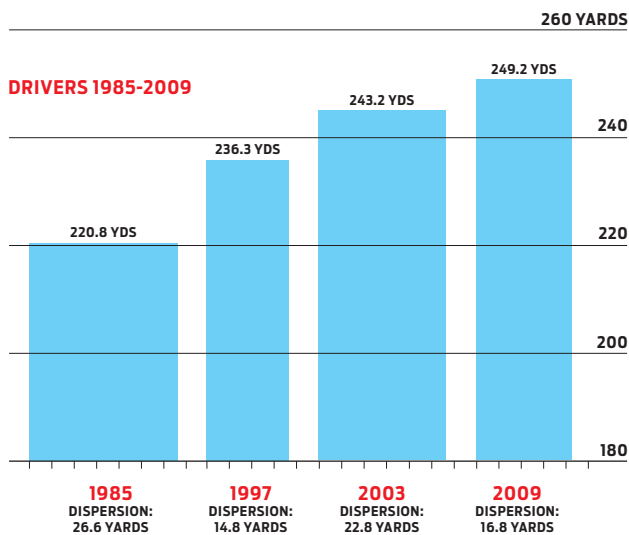

"Internally here, I call it aggregate incrementalism," says Jeff Colton, senior vice president of research and development for Callaway Golf. "It's the idea that as an R&D team, adding up tenths of yards of improvement is OK. You add up slight improvements in ball speed or aerodynamic patterns or off-center-hit robustness, and all of a sudden it becomes a large macro-effect."

Hot List 2009 changes.

This relentless pursuit of innovation explains why we began our Hot List research this

THE PROGRESS

**THE TECHNOLOGY EFFECT:
LONGER, HIGHER, STRAIGHTER**

year with 471 candidates, each with a story to tell. Those that excelled in making improvement possible in the most intriguing and appealing ways found their way onto this year's Hot List.

Our process also has been improved in two ways: First, where appropriate, we have split a club category into two price divisions to reflect the market. As a result, we eliminated the need for Value

as a criterion. Second, we've added the criterion of Look/Sound/Feel because readers aren't just interested in how the club affects the ball, but how it affects the player.

One more change: Our **Hot List for golf balls** will appear in an issue later this spring so we can review products that weren't available for evaluation this issue. It'll be our most complete examination of this segment ever.

The experiment was simple: Get some of today's equipment and some vintage clubs (courtesy of 3balls.com, a used-club website), mix in average golfers and fire up the TrackMan launch monitor to find out how much modern technology matters. Of course, when we say vintage, we're not talking about hickory-shafted spoons and niblicks. The oldest club we evaluated was less than 25 years old. Most were introduced within the last decade.

As expected, the results were convincing, starting with the driver, the single club that has improved the most in the past 20 years. We looked at four TaylorMade drivers from the past three decades ('85 Burner Plus, '97 Ti Bubble 2, '03 R580XD and the new Burner). According to our TrackMan ball-flight data, the new Burner driver averaged 28 more yards than the '85 Burner Plus, with significant improvement in dispersion despite the fact that the shaft in the modern Burner is about three inches longer. The results are dramatic, but what was more intriguing was the six-yard gain in distance—and accuracy—since the R580XD, a model just six years old.

We conducted this experiment with three generations of Callaway fairway woods, and the results were similar (straighter with each new generation and a 21-yard improvement in distance). Irons? It was the same story for low- and middle-handicappers hitting three Ping 7-irons introduced in the past two decades. The newest clubs produced more distance and a higher ball flight. Of course, your results might vary from ours, but you won't know until you try. —MS

Golfers have long been fascinated with technology as a means to improvement, but for much of the game's history new products have had no documented impact on the performance of average golfers. In the last decade that has changed significantly. *Two strokes' worth of change.* That's something we all can buy into, and what better place to start than the 2009 Hot List?

THE PROCESS ARRIVING AT HOT LIST WISDOM

Author and physician Martin H. Fischer wrote: "Knowledge is a process of piling up facts; wisdom lies in their simplification."

He could have been describing the Hot List process. We do pile up facts. One Excel spreadsheet for driver testing contained more than 5,000 data points. But that was just the beginning. Manufacturers submitted more than 1,200 pages of technical data to be reviewed by our editors and technical panel of Ph.D. scientists. In addition, our editors visited numerous manufacturers during the year.

We took the universe of clubs—471 separate entries were considered—and examined every detail that covers our four judging criteria. We then settled on 218 preliminary finalists. What followed was a 13-day visit to CordeValle Resort near San Jose, Calif., where, among other things, we met with our scientists to evaluate technology claims and trends, spent two days with six prominent retailers to better

understand the market, and conducted three days of club testing with 20 player panelists, gathering insight and opinion into what resonates with golfers of different abilities and what doesn't.

After returning home, the judges gathered to discuss the results. We evaluated and debated every club based on each of the four criteria. In the end, the judges voted on 218 clubs—meaning there were more than 800 debates during nine days of meetings that included several cartons of take-out food. Once the votes were tallied, we had our 116-club Hot List—or as Fischer might say, the wisdom of our simplification.

THE GLOSSARY SOME TECHNICAL TERMS DEFINED

BOUNCE The amount of space between the leading edge and the groundline when the club is in the square address position. In general, more bounce is better for soft sand and lush grass; less bounce is better for firm sand and turf.

BULGE The face curvature from heel to toe that corrects spin on mis-hits.

CAMBER The radius measurement of the sole from front to back or heel to toe.

CAST A way of manufacturing a clubhead by which molten metal is poured into a mold.

CC A cubic centimeter is the unit of measurement for clubhead volume.

CENTER OF GRAVITY (CG) A theoretical point that defines the average location of weight in a clubhead. It's the internal point about which the head rotates. A low CG helps to launch the ball higher. It isn't always found at the geometric center.

COMPUTER MILLED Refers to the process by which an automated machine cuts and shapes solid blocks of metal by reading code. Grooves and faces are often made this way to ensure tight tolerances.

COEFFICIENT OF RESTITUTION (COR) Used by manufacturers to refer to the springlike effect of a flexing clubface. The USGA limit is .83, which refers to the efficiency of energy transfer between two colliding bodies (clubhead and ball). For example, if a ball is projected at a face at 100 miles per hour, it must bounce off at 83 mph or less for the club to be conforming.

CUPFACE In this construction the faceplate is part of the front portion of the crown, sole and skirt. This pushes the joint farther from the face, allowing the face's perimeter to be thinner.

Technical panelist Jack Hu studies driver data during the Hot List Summit.

FLANGE The part of a putter that projects back from the face.

FORGED A way of manufacturing a clubhead in which heated metal is stamped into shape.

LEADING EDGE The most forward part of the sole, opposite the trailing edge.

MOMENT OF INERTIA (MOI) The measure of a club's resistance to twisting on off-center hits (sometimes called forgiveness). The USGA limit for drivers is 5,900 grams/cm².

TOE HANG The angle the toe of the putter deviates from horizontal when balanced at the shaft tip. In general, the greater this angle, the more suited the head is to arced strokes. **MAX ADLER**

TRACKMAN SAYS
THE KEY TO DISTANCE: LOFT OR FLEX?

The more we discover about the science of distance, the more it seems there is to learn. Golf Digest research over the years has suggested that most average golfers would benefit from a higher-lofted driver. To refine this idea, we wondered what role shaft flex plays, especially the combination of clubhead loft and shaft flex. We wanted to know what works better: less loft with more flex, or more loft with less flex. To find out, we tested average to above-average golfers with swing speeds of 95 to 102 miles per hour and discovered that less loft but more flex tended to produce better launch conditions (more carry and more total distance). In our test, a 9-degree driver with a regular-flex shaft worked better than a 10-degree driver with a stiff-flex shaft.

Why would that be? According to Tom Wishon, founder of Tom Wishon Golf Technology and author of *The Search for the Perfect Golf Club*, the reason has to do with a player's swing type. Less-skilled players who cast the club from the top cause a shaft with more flex to bow and return to straight well before making contact with the ball. Conversely, a better player who maintains wrist angle for a later release will cause the shaft to bow and spring forward just before impact, essentially adding loft at impact. "This is one of the reasons," Wishon says, "that we advise our clubmakers to always err on the side of a more flexible shaft, even with later-release players." —MS

MEASURING VOLUME

ALL SHAPES AND SIZES

To determine the head size of the modern-shaped woods and hybrids that made the Hot List, who knew we'd have to borrow a method from classical antiquity? The Greek thinker Archimedes discovered that the volume of fluid an irregular-shaped object displaces is equal to its own volume. So by dipping each clubhead in a bucket of water on a scale, careful to first smoothly fill in concavities with clay, we determined its volume by the weight (in grams) of the water it displaced. This is the same method the USGA uses to determine clubhead-size conformance.

You'll notice that not all drivers are at the maximum head-size limit of 460 cubic centimeters. Volume can vary across lofts, with the highest lofts typically being the largest. Sometimes stretching the volume can mean a compromise in other aspects of the design, especially in clubs for better players who most often hit the center of the face. "Large faces take up a lot of weight and pull the center of gravity forward," says Tom Wishon, founder of Tom Wishon Golf Technology, "Smaller faces can save weight that can then be used in back at the perimeter." —MA

TECH TALK
The scooped crown is designed to lower the CG, and the wide shape helps increase MOI. Internal ribs strengthen the crown to improve energy transfer.

PLAYER COMMENTS
(H) "It goes straight and has just the right height, even if it's ugly. It's more solid-feeling than other drivers and is very forgiving. I like the loud sound." ... (M) "They sure did fix the sound and feel of this club; both are great now. The trajectory is nice and high without being too high." ... (M) "The ball has a lot of roll and is exceptionally long overall. A very hot face. If you have the room to run—and ear plugs—this is a great club."

HOT
This is a powerful shape, and the MOI is among the highest we measured.

NOT
It's louder than Boo Weekley's fan base.

CLEVELANDGOLF.COM

MIZUNO MX-700

STREET PRICE
\$300

LOFTS
9.5, 10.5, 12

TECH TALK
The wide-body geometry is designed to push the CG toward the back, and the face incorporates Ti-9, a titanium alloy designed with a grain structure that allows for a thinner face, which helps improve ball speed on off-center hits.

PLAYER COMMENTS
(M) "It's just about perfect. I couldn't not hit it straight." ... (M) "This is just a cannon, deadly long, and it looks very comfortable at address." ... (T) "I like the graphics. They accentuate how big the head is, which will give a lot of players confidence."

HOT
Maybe average hacks have been intimidated by Mizuno, but they shouldn't be with this club. Its subtle use of geometry is effective without sacrificing looks.

NOT
Mizuno offers dozens of custom shafts, but with no interchangeable-head fitting system, it's hard to test all those options.

THE NUMBERS

Face height	52 mm	Face area	44.6 cm ²
Heel to toe	113 mm	Shaft length	45.5 in

LOFTS
8.5, 9.5, 10.5, 11.5, HL

TECH TALK
Round or square, each loft is treated as a separate design. Many crucial elements are optimized, including the CG (deeper as loft increases), lie angle (the highest loft is 4 degrees more upright than the lowest) and face height (lower as the loft increases).

PLAYER COMMENTS
(H) "I don't love the square head, but it works well on center hits and corrects a slice nicely." ... (M) "I think the round version is incredibly long, a beast. Won't hurt you for forgiveness, either, but the square is better." ... (L) "Trajectory is somewhat high, but the ball carries a long way."

HOT
A free-thinker's design, this update is handsome, solid and Nike's best-sounding effort ever. The company's fitting commitment is finally worthy of its product line.

NOT
We would like to see more innovation in the face design.

THE NUMBERS

Face height (DYMO) ... 52 mm	Face area 40.5 cm ²
Heel to toe 111 mm	Shaft length 45.75 in
Front to back 115 mm	MOI VERY HIGH

WILSON
SMOOTH

STREET PRICE
\$300

LOFTS
8, 9, 10.5, 12* (*also in offset)

TECH TALK
It progressively incorporates a changing weight pad in the sole to optimize the CG within each loft (middle-low in the low lofts, low and deep in the high lofts). Also, a "trap face" doubles the face area with the highest coefficient of restitution (COR).

PLAYER COMMENTS
(M) "That club's on steroids. Maybe not the most forgiving, but great distance." ... (M) "A terrific performer. I'd tell you how it does on mis-hits if only I could mis-hit it, but I can't!" ... (L) "Wow, that's a good club. I missed two or three, and all would have been in the fairway."

HOT
It has softer edges, and there's some interesting work here on the CG and the face design. Wilson even points to research that shows R-flex and S-flex players picking up extra clubhead speed with its club.

NOT
Its MOI is nothing groundbreaking.

THE NUMBERS

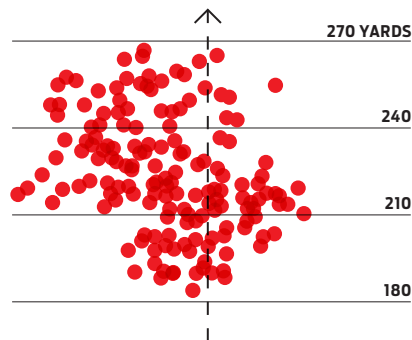

Face height 48 mm	Face area 40.5 cm ²

TOTAL DISPERSION (YDS): 15.3 LEFT (all shots)

TRACKMAN SAYS
JUST HOW ANTI-SLICE CAN A DRIVER BE?

It's a fact: Anti-slice drivers will help you hit the ball straight, or even (gasp) draw the ball. To test how well they work, we had a group of low- to high-handicap golfers hit 11 anti-slice drivers (aiming for a center line) and used TrackMan to measure the ball flights. Of 203 hits, 72 percent went left of center, and the average dispersion of all shots was 15.3 yards left. Another piece of good news: Shots that went left went an average of 6.6 yards farther than those that went right.

So how do these slice-fighting clubs work? "A true anti-slice driver is designed with more technology than just a closed face," says Jeff Sheets, vice president of research and development at Golfsmith and designer of the Killer Bee B-Sting (below left). For instance, Sheets says the center of gravity in the Killer Bee is back and toward the heel of the club to produce a higher launch angle that imparts less ball spin. This causes toe and center hits to have draw spin. The driver also is 5 degrees more upright than usual to encourage face closure at impact. The Bob Burns No Bananas DAT (below right), which in our testing averaged 38 yards left of center, has a 7-degree closed face and a lightweight head to promote a draw.

Only you know how much slice correction you really need, but regardless of how bad you have the rights, today's driver technology offers help. —AM

CLUBS LISTED IN ALPHABETICAL ORDER

CLEVELAND LAUNCHER

STREET PRICE
\$180

LOFTS
13, 15, 17, 19, 22

TECH TALK
The crown is a half-millimeter thick, saving weight that has been added to the horseshoe-shape weight pad on the perimeter of the sole. The result: A moment of inertia (MOI) exceeding 3,000 and a center of gravity (CG) that promotes a higher trajectory. The face is 11 percent larger than previous Launcher fairway editions.

PLAYER COMMENTS
(M) "The longest one I've hit so far. The ball took off." ... (L) "Has a crispness at impact that is hard to beat. The ball just shoots off the face. A nice surprise." ... (L) "Long, straight and high—who wouldn't like that?" ... (M) "Very easy to hit. Doesn't feel like it has a tiny sweet spot—it has the same feedback all over the face."

HOT
The rear weighting seems like a nifty arrangement, and we like a trio of 3-wood lofts. Two versions of R- and S-flexes is a keen idea as well.

NOT
We'd like to see a hot-steel face insert.

THE NUMBERS

Face height (3-wood) ... 33 mm	Face area 23.5 cm ²

Pro: 13, 15, 18; F- and M-Speed: 15.5*, 18*, 21*, 24†, 27† (*also in offset, †seniors only)

TECH TALK
Cobra has addressed the needs of three types of golfers: fairway woods for better players (the Pro) and two versions—a regular-hosel configuration and an offset model—for those who need a higher launch. The standard model has a weight-saving shaft and a wide, shallow-face profile.

PLAYER COMMENTS
(M) "They got it right. Solid at impact, and the ball leaps off the club." ... (T) "The regular version flies high, and the pro version penetrates. Nice management of game-improvement and player trajectories." ... (L) "Standard in terms of looks, but there's nothing standard about its performance. There's that hot Cobra 'crack' off the face."

HOT
A solid entry with MOI benefits that are readily apparent. We especially like the confidence provided by the shallow face.

NOT
Check the number on the sole. That 7-wood looks as big as a 3-wood.

THE NUMBERS

Face height (3-wood) ... 33 mm	Face area 21.5 cm ²

ADAMS
INSIGHT TECH A4/A40S

STREET PRICE
\$270

LOFTS
a4: 13, 15, 18; a40S: 16, 19

TECH TALK
These clubs combine the qualities of a fairway wood (distance) with a hybrid (ease of use). Each model features pull-face construction and a maraging-steel face insert. The a4 has an adjustable weight port in the sole. The a40S has tungsten inserts in the rear perimeter and a lightweight magnesium crown that allows weight to be relocated low and deep.

PLAYER COMMENTS
(M) "Everything about this club inspires confidence for a player like me." ... **(T)** "Looks more like a hybrid, which has got to be a bonus if you have more confidence in hitting a hybrid." ... **(M)** "Looks a little like a blob on a stick, but the trajectory was perfect and extremely long."

HOT
Adams continues to change the paradigm with an improvement in shape (especially the sole radius) and ball flight.

NOT
The a4's weight screw clogs with dirt; the a40S might be too new wave for some.

THE NUMBERS

Face height (a4 3-wood) 33 mm	Face area 23.4 cm ²
Face width 91 mm	Head volume 157cc

CALLAWAY
BIG BERTHA DIABLO

STREET PRICE
\$200

LOFTS
13, 15, 18; draw: 16, 18.5, 21, 23.5

TECH TALK
The unusual shape of the stainless-steel head is what Callaway calls "edge technology." It allows designers to place weight deep behind the face to help improve stability on off-center hits and to optimize the CG and trajectory for a neutral or draw ball flight. The traditional Callaway short, straight hollow-hosel design saves weight to be distributed on the perimeter.

PLAYER COMMENTS
(M) "The look takes some getting used to, but it still has that classic Callaway feel. Pretty forgiving." ... **(T)** "Get these to my pro shop." ... **(M)** "I like this shape; it encourages you to take it back on an inside path. The ball goes very straight."

HOT
Not a typical fairway wood in looks, but its functional geometry is refreshing. Many middle- and higher-handicap players will like the less-than-60-gram shaft.

NOT
Ugly? Maybe. And why not offer a neutral 21-degree model?

THE NUMBERS

Face height (3-wood) 33 mm	Face area 23.4 cm ²
Face width 91 mm	Head volume 190cc

CALLAWAY
FT

STREET PRICE
\$250

LOFTS
15*, 17*, 19*, 21†, 23† (*also in draw, †draw only); tour: 13, 15

TECH TALK
Fusion technology is the foundation of Callaway's research and development. The FT features a stainless-steel face and body fused to a soleplate featuring heavy tungsten. This gave company engineers the ability to situate the CG where they wanted to improve launch and ball flight. Dual runners on the sole help with turf interaction.

PLAYER COMMENTS
(M) "I feel like it straightened out some of my mis-hits." ... (L) "I had a big mis-hit off a tee, and it still went a long way." ... (T) "If you need to hit it in the fairway on a tight hole and not lose distance, this is the club." ... (T) "Stands out. Must have its goodies in the right places inside the head."

HOT
Inspired technology finds a way to look classic. The tungsten soleplate serves as a launching pad for long, high shots.

NOT
All 7-woods are draw versions? Maybe it makes sense, but it doesn't look right.

NIKE
SQ DYMO/DYMO²

STREET PRICE
\$230

LOFTS
Dymo: 13; Dymo²: 15, 17, 19, 21

TECH TALK
Its Quad Keel sole design results in only four points of the club interacting with the ground, diminishing the likelihood of turf interference with the swing. The back of the sole is elevated, reducing friction with the turf. Like in its big brother, the DYMO driver, its characteristics (CG, MOI, lie angle) are adjusted as lofts and head styles change.

PLAYER COMMENTS
(M) "Wait out that first impression, because this thing works. Even fat shots were going 200 yards." ... (L) "I love this club, even though it looks like a shovel to me. The ball flight was exactly what I look for, and it might be the straightest of the bunch." ... (T) "Great club off the tee and the fairway."

HOT
This club delivers a punch, but its real strength is a sole design that's a Ginty-like throwback. Add some 21st-century horsepower and thinking, and you have a genuine winner.

NOT
Square look of Dymo² is still a tough sell.

THE NUMBERS

Face height (3-wood)...	33 mm	Face area	22.5 cm²

TAYLORMADE
BURNER RESCUE

STREET PRICE
\$160

LOFTS
18, 20, 23 (tour launch); 17, 19, 22, 25, 28 (high launch)

TECH TALK
Both models feature thin clubhead walls (0.6 millimeters) and a sole that's distinctly wider than the crown. This allows designers to redistribute weight and move the CG deeper and 35 percent lower than last year's Burner Rescue. The longer, lighter shaft and grip are aimed at boosting clubhead speed. The smaller head has a slight fade bias, and the larger head is designed to draw the ball.

PLAYER COMMENTS
(M) "It's so forgiving, you can't mis-hit it..."
(M) "I found the smaller version more appealing. Definitely very long and high..."
(L) "I hit it out of divots and off the toe, and it still performed well."

HOT
These two models from TaylorMade cover all types of skill and size preferences.

NOT
Wide, fairway-wood-style footprint might not be the most versatile from all lies.

THE NUMBERS

Face height (HL)..... 30 mm	Face area..... 18 cm ²

CLUBS LISTED IN ALPHABETICAL ORDER

ADAMS
IDEA PRO GOLD

STREET PRICE
\$220

LOFTS
16, 18, 20, 23, 26

TECH TALK
A square-shape player's hybrid might sound like an oxymoron, but the Idea Pro Gold's narrow sole, neutral face angle, lower-loft options, maraging-steel face and mid-range CG are designed for the faster swinger who's looking for a hybrid with a high MOI that will produce a long-iron-like ball flight.

PLAYER COMMENTS
(M) "I really prefer the smaller profile of this one; it feels like you can get it off the ground much easier." ... (L) "I hate how it looks, but it performs really well. There's a lot of 'oomph' when it strikes the ball." ... (T) "Set it down on the turf, and you can tell right away it's a player's club."

HOT
Maybe not a traditional look, but a real crowd-pleaser for the high-speed set. The 17 custom-shaft options help, too.

NOT
Good luck getting more than \$200 for a hybrid in this economy, and that sole weight clogs with dirt.

FT

STREET PRICE
\$200

LOFTS
18, 21, 24, 27

TECH TALK
The FT's stainless-steel body is equipped with a high-density, tungsten-infused sole that moves 50 percent of the clubhead's weight to the sole. This optimizes launch conditions and offsets the weight of the longer hosel—a feature that allows for a constant distance between the leading edge of the face and the shaft axis throughout the different lofts.

PLAYER COMMENTS
(M) "It has a nice sound and ball flight." ... (M) "Very traditional-looking. In a way it's almost too long—you definitely don't need two of these in your bag. Really amazing in the rough." ... (L) "A really solid club. It'll keep you in contention." ... (T) "It's forgiving on tough lies, even downhill."

HOT
The technology's hidden but powerful, and the look is almost vintage. The neutral and draw options serve two kinds of players.

NOT
Super game-improvement players need more help than the draw version offers.

CLEVELAND LAUNCHER

STREET PRICE
\$150

LOFTS
16, 19, 22, 25, 28

TECH TALK
The company's first "traditional" hybrid might be its most effective. Engineered on an iron chassis, the Launcher has a parabolic leading edge for easy turf interaction, and the horseshoe-shape perimeter sole weighting helps create the highest-ever MOI for a Cleveland hybrid. To save more weight, the crown has stayed low, and the rear walls have been minimized.

PLAYER COMMENTS
(M) "Good feel and balance. It breeds confidence."... (M) "I really like the look of the longer head and how the ball jumps off the clubface. This is the longest hybrid I've hit."... (M) "The alignment aid is distracting, but this club is very easy to launch off the ground and very forgiving."

HOT
Proof that good sound, feel and performance don't have to come with a hefty price tag and an odd shape.

NOT
It's unanimous: The flame alignment decal looks like an unfinished tattoo.

INSTRUCTION TIPS DON'T DIG: THE HYBRID WILL GET THE BALL OUT

The beauty of hybrids is that you can play them from almost any lie—even when your ball is in a divot hole. The sole of a hybrid, if used correctly, helps prevent the clubhead from getting stuck in

the crater. Most amateurs have a tendency to try to dig the ball out of this lie, and the result is usually a steep swing and poor contact. What you want to do is let the club glide through the divot. To hit the ball solidly, feel as if your shoulders are level as the club swings through impact. That feeling will keep the bottom of your swing as level as possible. If your lead shoulder is lower than your trailing shoulder, the club will dig.

CLUBS LISTED IN ALPHABETICAL ORDER

NICKENT
3DX RC

STREET PRICE
\$100

LOFTS
14, 17, 20, 23, 26, 29

TECH TALK
The tungsten-polymer inserts in the sole serve two purposes: They increase the club's MOI by 25 percent over the original 3DX Ironwood, making the club more stable through the swing, and the polymer backing helps dampen vibration. Six lofts will fill every possible gap you might have in your bag.

PLAYER COMMENTS
(M) "Goes right where you're aiming, good swing or bad. Easy to hit." ... (M) "Destined to be a classic. It might not be as forgiving, but when you hit the ball, it goes." ... (M) "The weight and balance made it very easy to swing. Good distance and a nice sound." ... (L) "I think I'm going to hit this well just by looking at it."

HOT
Nickent's reputation was built on this kind of quality. Golfers get tour-proven performance for \$100.

NOT
Off-center hits feel worse than on others.

TRACKMAN SAYS WHERE DOES YOUR SWING FALL APART?

When it comes to versatility and ease of use, hybrids have no peer. But just because a hybrid has the same number (or loft) as the iron it's replacing doesn't mean it will go the same distance. In fact, where the gap becomes meaningful differs by player type.

Using TrackMan ball-flight analysis, we tested middle-handicappers hitting long irons and corresponding hybrids. On average, the players we tested hit the 4-iron and 4-hybrid about the same distance (180 yards), and the 3-iron just four yards farther (184 yards). But the 3-hybrid went 192 yards, making it an ideal replacement for the 3-iron.

We also tested low-handicappers. They hit hybrids farther than the corresponding iron in every instance, and that leaves a huge distance gap between the 4-hybrid and 5-iron—not a desirable scenario. Instead, the low-handicappers tested should replace the 2-iron with a low-lofted hybrid (16 to 19 degrees), which they hit an average of 215 yards. That's 12 yards farther than a 2-iron. (Their 3-iron went 197 yards and 4-iron 187 yards.) The 2-hybrid offers a better gap and a stronger option as a driving iron.

Perhaps that explains why hybrids used on the PGA Tour tend to be lower-lofted. At last year's Barclays tournament (the first of four FedEx Cup playoff events), 64 of the 92 hybrids used (69.6 percent) had less than 20 degrees of loft. —EMJ

IDEA TECH A4

STREET PRICE
\$800 (set of eight, steel)

LOFTS
6-iron: 29 degrees, PW: 45 degrees

TECH TALK
This is a combination set that includes a pair of hybrids. The six forged irons are made from a soft 8620 carbon steel and feature a stabilizer bar designed to provide feedback at impact and improve feel. The cavity-back design pushes weight to the perimeter for forgiveness. A four-way tour-cambered sole reduces turf interaction for more consistent results.

PLAYER COMMENTS
(M) "Now this is a good idea! Loved being able to pick up some extra distance with the hybrids." ... (T) "I like the hybrid-to-iron progression." ... (T) "Crisp impact with the irons that any player could appreciate."

HOT
The hybrids, with Boxer technology that increases moment of inertia (MOI) and a Mitsubishi Javln FX shaft, make this a set to consider. Reducing the number of hybrids from three to two is a plus in this category.

NOT
No matter how good, square hybrids look wrong in the minds of some.

TRACKMAN SAYS STEEL SHAFTS AREN'T FOR EVERY- ONE

What's the difference between a steel iron shaft and a graphite iron shaft of the same flex? To study this consumer conundrum, our 5-handicapper hit two 7-irons—one with a stiff-flex shaft in steel and one in graphite. Our 14-handicapper did the same, except with a regular-flex shaft in steel and graphite.

The steel shaft worked best for the 5-handicapper. He averaged eight more yards in carry distance, and his shots had a tighter dispersion. Conversely, the 14-handicapper was more accurate with the graphite-shafted 7-iron and hit it three yards farther on average. Another bonus: His maximum trajectory was 2.5 yards higher with the graphite shaft.

"Graphite shafts usually have lower bend points than steel shafts, and so they tend to kick the ball up in the air," says Mike Dickerson, president of the International Professional Association of Clubfitters. "In general, driver swings of 95 to 100 miles per hour is the range where you can play either graphite or steel shafts. I often ask people if they're a hitter or a swinger to help them decide. A hitter is someone with tempo like Jesper Parnevik who really goes after it. I'll steer that person toward steel. However, a swinger, or someone with tempo more like Freddie Couples, I'll steer toward graphite."

So the difference between steel and graphite depends on who's swinging it. —MA

WE REALIZE THAT BUDGETS HAVE GOTTEN TIGHTER. THAT'S WHY YOU CAN KEEP TRACK OF HOW MUCH YOU'RE VIRTUALLY SPENDING WHEN YOU BUILD YOUR IDEAL SET OF CLUBS AT GOLFDIGEST.COM/GO/HOTLIST.

TOUR EDGE EXOTICS XCG

STREET PRICE
\$600

LOFTS
6-iron: 29, PW: 46

TECH TALK
The dual-density dampening system uses a soft insert in the 7-iron through pitching wedge for added feel around the greens. The long irons have a firmer insert for a more solid feel. The tour grind on the heel section is designed to reduce grabbing.

PLAYER COMMENTS
(M) "The variability on mis-hits was so small, the shots would be on the green." ... (L) "One of the better ones. Sound and feel were great." ... (T) "Good, sharp feel coming off the head. This is a nice set."

HOT
Somewhat of a player's look in a club with more than enough technology, this iron will prove to anyone not already convinced that Tour Edge is more than just the "good value" company. In fact, it might be the best iron the company has ever made.

NOT
The 5-degree gaps between the 8-iron, 9-iron and pitching wedge are too large for the scoring clubs.

JASON GUSS IMAGES CHARLES LABERGE

INSTRUCTION TIPS 'PULL' THE CLUB DOWN WITH YOUR KNEE

Game-improvement irons have made it easier than ever for beginners to hit passable shots. But to start hitting it pure, you need to get into the proper impact position. You can do this

with some simple swing imagery. As you complete your backswing, picture a string connecting the butt end of the club to your right knee. To get your hands to start down, imagine that your right knee has to move first to pull the club toward the ball. This will help you start the downswing with your lower body and move your weight laterally to your front foot and will put you in position to hit down on the ball.

JASON GUSS, ranked among Golf Digest's top-10 teachers in Michigan as voted by his peers, is based at the Treetops Resort in Gaylord.

ADAMS
IDEA TECH A40S

STREET PRICE
\$900 (set of eight, graphite)

LOFTS
6-iron: 28 degrees, PW: 44 degrees

TECH TALK
Adams has tweaked its set makeup from last year's a30S by adding a hybrid-like 9-iron, leaving one cavity-back iron (the pitching wedge) instead of two. The Boxer hybrids have a magnesium crown that is 77 percent lighter than stainless steel. The hybrids feature tungsten weights in the heel and toe to improve forgiveness.

PLAYER COMMENTS
(H) "It's not a club you'd fall in love with looking at it on the rack, but you do once you hit it." ... (M) "The feel is fantastic for this kind of club, and the transition throughout the set seems spot-on."

HOT
When it comes to helping golfers, Adams clearly makes an effort. A maraging-steel face and the pull-face construction on the hybrids give choppers added distance, and Adams doesn't skimp on the shaft (Graphite Design's Tour AD YSQ-HL).

NOT
Wood-like hybrids extending to the 5-iron slot might not suit some players.

THE NUMBERS

GOLD

CLEVELAND
HIBORE XLI

STREET PRICE
\$700

LOFTS
6-iron: 30, PW: 45

TECH TALK
Cleveland has stuck to its hollow-construction concept, but it redesigned this hybrid set to include a larger chassis and face area, along with progressive sole widths (thinner as you move toward the short irons).

PLAYER COMMENTS
(H) "I can go home right now as long as I can take these with me. They feel crisp, and I've never been able to hit a hybrid before—let alone an entire set." ... (M) "You'd never know the clubhead was hollow from the sound. It's sweet!" ... (M) "Much improved over the previous version."

HOT
The number of shaft options for a hacker set is impressive, and the redesign has resulted in a sleeker-looking clubhead that is more palatable at address. Even the short irons don't look offensive—no small feat in an all-hybrid set.

NOT
The hybrid sand-wedge option is pushing the concept too far. What's next, a hybrid chipper?

COBRA
SZ

STREET PRICE
\$800

LOFTS
6-iron: 29, PW: 44

TECH TALK
A shorter hosel lowers the CG, and the hefty offset helps promote a draw. The wide sole—nearly 20 percent wider than the S9 model—helps prevent digging into the turf, and it allows the CG to be moved back to improve lift.

PLAYER COMMENTS
(H) "Love the sole. There's no way to chunk it with these." ... (H) "Effortless. It doesn't feel like I'm hitting the ball, just swinging the club." ... (M) "A really high flight. It just seems to soar out there." ... (M) "There's no vibration anywhere when you hit it, even on the thinnest of shots."

HOT
The swings in this player group are widely varied, making custom options critical, and Cobra doesn't disappoint. Among the highlights are the ability to move the lie angle up or down 4 degrees and no restrictions on custom set makeup.

NOT
For a company so successful in hybrids, the lack of them in the standard set is puzzling.

COBRAGOLF.COM

MIZUNO
MX-100

STREET PRICE
\$700

LOFT
6-iron: 29, PW: 45

TECH TALK
The hybrids are designed with a drop-down crown that allows them to be bent for loft and lie-angle adjustments. Like the MX-200, the Y-Tune bar pushes weight to the toe to help mis-hits, and the Exsar graphite shaft comes in regular (65-gram) and light (60-gram) versions. For those seeking custom-shaft options, Mizuno offers 48.

PLAYER COMMENTS
(H) "This set makes a perfect transition from hybrids to irons. Are the hybrid shafts shorter than normal?" ... **(M)** "What you get is a repeatable ball flight with no crazy jumps." ... **(M)** "This club is in the wrong category—and I mean that as a compliment. It has the feel of a player's blade."

HOT
Mizuno gets major kudos for starting the set with 4- and 5-hybrids that use 4- and 5-iron-length shafts, respectively. We'd like to see more companies follow.

NOT
A lightweight steel shaft would be nice.

THE NUMBERS

NIKE
SLINGSHOT HL

STREET PRICE
\$700

LOFTS
6-iron: 30, PW: 45

TECH TALK
The set has three hybrids (3, 4 and 5) and "slingshot" game-improvement irons that feature more offset in the middle irons than in the short irons. The middle irons have an elongated face to increase MOI. This helps improve ball speed on mis-hits. Nike worked with shaftmaker UST on a proprietary graphite-shaft option.

PLAYER COMMENTS
(H) "These irons get up so high they might need a parachute for landing." ... **(M)** "Cool-looking and contemporary. Center hits feel soft; I wasn't expecting that." ... **(M)** "Provides a confident feel at address."

HOT
The sole design is a hallmark of Nike irons, and that attention to detail shows—not only in the variable width sole of the 6-iron through pitching wedge, but in the functional keel-sole design of the hybrids that cuts through lettuce-like rough.

NOT
High-handicappers might hit a few worm burners with the 19-degree 3-hybrid.

THE NUMBERS

TAYLORMADE
BURNER PLUS

STREET PRICE
\$800

LOFTS
6-iron: 28, PW: 45

TECH TALK
The oversize head has generous offset and a wide sole to help the strong-lofted irons get the ball airborne. A thin (2.4 millimeter) clubface combines with the company's inverted-cone technology to optimize ball speed on off-center hits. A longer, lightweight shaft is designed to further enhance distance. The CG is positioned to promote launch and spin (as much as 300 revolutions per minute). This allows the lofts to be strengthened by 1 degree.

PLAYER COMMENTS
(H) "They pretty much have it all: good distance, solid impact, no slice and great feel." ... **(M)** "Whoa! Absolutely no need to lay up with these irons in the bag."

HOT
The large clubhead and thick topline help create a "can't miss" confidence. And for players who aren't able to hit a 3- or 4-iron, there's an option to grab a pair of Burner Rescue clubs for an extra \$100.

NOT
Burner Rescues should be standard.

WILSON D19

STREET PRICE
\$550

LOFTS
6-iron: 28.5, PW: 42.5

TECH TALK
After Wilson's research revealed that more than 80 percent of iron strikes are from the center to the toe area, the company turned its focus to helping players with mis-hits on the toe by increasing the hosel length, using wide-tip shaft technology and moving weight to the toe. A wider sole and lower blade height than its predecessor help increase MOI as well.

PLAYER COMMENTS
(H) "A nice, clean look for such a forgiving set." ... (M) "Even the wide shaft seems to fit nicely with this set." ... (M) "I think it's safe to say anyone could play with these."

HOT
Padraig Harrington's major wins have given the company some visibility, and golfers would be wise to give this iron a look. The urethane badge offers a syrupy feel for a super game-improvement iron.

NOT
Calling a 42.5-degree club a pitching wedge is misleading. Calling an 18-degree club a 3-iron is dangerous.

INSTRUCTION TIPS HIDE YOUR CELL PHONE TO HIT SOLID IRONS

Considering the advancements in iron technology, especially in super game-improvement clubs, the time to trust the club to get the ball airborne is here. Yet I still see amateurs keeping their weight on their back foot and trying to scoop the ball into the air. This scooping motion often results in poor contact. I've never been a fan of cell phones on the course, but if you want to hit solid shots, I've found a good use for your mobile phone. Clip it to your left hip (A), and practice hitting shots trying to hide the phone from view. If you hang back, it'll still be visible. But if you shift your weight to your front foot and rotate around that leg, your hip turn will move the phone out of sight (B). **TODD KERSTING**

CLUBS LISTED IN ALPHABETICAL ORDER

CALLAWAY X-22 TOUR

STREET PRICE
\$800 (set of eight, steel)

LOFTS
6-iron: 30 degrees, PW: 46 degrees

TECH TALK
To get the CG low and toward the center of the face (as opposed to some irons that have the CG high and toward the heel), Callaway thinned out the hosel and topline, lowered the blade height and redistributed weight in the undercut channel.

PLAYER COMMENTS
(L) "Not the cleanest topline in the world, but it's a fine club." ... (L) "This one is for me!" ... (T) "The compact head and lack of offset make this a club that is classic and pure. A nice feel for cast, too."

HOT
Although it says X-22 Tour on the badge, this iron is less like its predecessor, the X-20 Tour, and more like the X-Tour, one of our favorites from the 2006 Hot List. It's a change we favor, along with the sole design that features a beveled trailing edge that narrows the sole. The X-20 Tour was a player's club for wannabes. This one is the real deal.

NOT
When it comes right down to it, the iron still emphasizes forgiveness over feel.

THE NUMBERS

Sole width (6-iron) ... 16.4 mm	Topline 5.4 mm
Toe height 54 mm	Surface area 30.2 cm ²

CALLAWAYGOLF.COM

MIZUNO MP-52

STREET PRICE
\$900

LOFTS
6-iron: 31, PW: 47

TECH TALK
A pair of deep, crescent-shape pockets are milled into the back cavity, saving 14 grams of weight that has been moved lower. The sole design, with a rolled leading edge, cambered mid-sole and beveled trailing edge, is designed to improve turf interaction in a variety of conditions.

PLAYER COMMENTS
(T) "Excellent across the board. Forgiveness in longer irons was exceptional." ... (L) "I bought the MP-60s but could never adapt to them. These are much better than those." ... (T) "I like the fact that off-center hits still felt solid."

HOT
The sole is a bit beefier than you'd expect in an MP iron, but these are a fine option for the player who wants the sweet, forged feel of a Mizuno iron but doesn't have quite enough game to handle the MP-62.

NOT
Unfortunately, you can catch a glimpse of the pocket cavity at address on the 3- and 4-irons.

THE NUMBERS

Sole width (6-iron) ... 20.5 mm	Topline 5.5 mm
Toe height 56.6 mm	Surface area 32 cm ²
Heel to toe 86.4 mm	Stock shaft weight 125 g

	DEMAND ★★★★½	

MIZUNOUSA.COM

MIZUNO MP-62

STREET PRICE
\$900

LOFTS
6-iron: 31, PW: 47

TECH TALK
The dual-muscle design blends two muscle pads—the outer pad allows Mizuno's engineers to precisely place the CG in each iron, and the inner pad puts mass behind the sweet spot for optimal feel. And, of course, the iron features the company's "grain-flow" forging process.

PLAYER COMMENTS
(T) "Surprisingly good workability in the short irons." ... (L) "The harder you hit these, the softer they feel. That's a pretty neat trick." ... (T) "Slightly lower trajectory and more responsive than the MP-52."

HOT
A Plain Jane that scores well in the talent portion of the competition. The sole glides through the turf, and the minimal offset helps move the ball anywhere you want it to go. If you've got game, you'd be a fool not to look at these.

NOT
Stronger players will gravitate to this club, so we'd like to see the stock shafts include the Project X 6.0, not just the 5.5.

THE NUMBERS

Sole width (6-iron) ... 19 mm	Topline 6 mm
Toe height 54.3 mm	Surface area 29.3 cm ²
Heel to toe 84 mm	Stock shaft weight 125 g

CORALEE JORGENSEN IMAGES CHARLES LABERGE

INSTRUCTION TIPS
USE TWO TEES TO FIND THE SWEET SPOT

The reason the best golfers choose player's irons is that they offer great control, workability and distance—but only if you hit the ball on the sweet spot of the club. However,

if you've ever seen one of these irons up close, you know the sweet spot isn't very big. To hone a swing that delivers a center-face hit every time, try this tee drill: Place two tees in the ground about four inches apart, and put a ball between them. Now take one of the most unforgiving irons in the bag, say, the 4-iron, and practice hitting the ball without touching either tee. This drill will help you pure your irons consistently.

Coralee Jorgensen, Golf Digest's No. 1 teacher in South Dakota as voted by her peers, works at Westward Ho Country Club in Sioux Falls.

THE TEACHERS WE INVITE TO THE HOT LIST SUMMIT ARE TOP-RANKED, AND THEY HAVE A WEALTH OF KNOWLEDGE TO SHARE. GO TO GOLFDIGEST.COM/GO/HOTLIST TO READ MORE TIPS.

CLUBS LISTED IN ALPHABETICAL ORDER

ADAMS IDEA PRO GOLD

STREET PRICE
\$900

LOFTS
6-iron: 30, PW: 46

TECH TALK
Two shallow Boxer hybrids complement six carbon-steel, forged cavity-back irons that have grooves with 14 percent more volume than the original Idea Pro. The mirror-chrome plating and the constant offset provide a traditional look.

PLAYER COMMENTS
(L) "The finish on these is as pretty as anything I've seen." ... (L) "I'm not a fan of the hybrids, but I would play these irons any day." ... (T) "These are the perfect recommendation for a player who likes the look of a player's iron but doesn't have the skill to hit a player's 3- or 4-iron."

HOT
The shaft options (Project X for steel and Mitsubishi Javln FX for hybrids) are a nice surprise. This is the only player's iron to make our list that comes with hybrids standard, and the one that replaces the 3-iron is nothing short of cheating.

NOT
However, two hybrids in a player's set is one too many.

TECH TALK
The dense tungsten toe weight, longer hosel and small cavity are designed to increase MOI for forgiveness. The dual-stabilizing bars in the cavity and urethane insert help improve feel. Ping's Web-Fit system will make sure you're correctly matched to one of the company's 12 color codes.

PLAYER COMMENTS
(L) "This club produces shots with a nice, climbing trajectory." ... (L) "Quite workable. Everything you would want in a player's iron." ... (T) "Good, sharp feel coming off the head. Not the softest feel, but it's still a nice club."

HOT
This is a stellar upgrade from the S58 and S59 offerings, both in technology and appearance. With this clean-looking club and its game-improvement features, Ping continues to add the form to the function it has long been known for.

NOT
The cast feel remains noticeable in a mostly forged field.

WOMEN'S REPORT
YOUR GAME IS WORTH AN UPGRADE

Last March, during a fun-filled but hard-core women's golf retreat at Kiawah Island Golf Resort in South Carolina, I peeked inside the bags of the 75 women who each had paid at least \$1,400 to participate in the three-day event. What I found appalled me. Hidden inside designer golf bags and under chic headcovers were countless steel shafts, numerous 1980s-era blades, at least a dozen 3-irons and a few persimmon woods. (Yikes!) I could count on one hand the number of sets that had been purchased within the past two years, and the vast majority were at least 10 years old. When I asked the women—most of whom were avid golfers—why they were using such outdated gear, the typical reply was: "I'm not good enough to notice the difference."

As I told the women at Kiawah, I don't care how bad of a player you think you are. If you don't update your equipment, then you're never going to get better. (And by update, I don't mean buying a 1995 Great Big Bertha on eBay—I mean getting custom-fitted on a launch monitor and investing in a high-lofted 460-cubic-centimeter driver with high moment of inertia.) If you happen to use your husband's hand-me-downs, you might as well hang up your FootJoys and take up blind-folded cliff diving. You're just as likely to hurt yourself.

Today's women's equipment is significantly better than it was three years ago, and it will allow you to play better golf. Many of the clubs included in this year's Hot List are available in women's versions (indicated by "W" icons). But most female players—those with driver swing speeds of less than 65 miles per hour—should use women-specific "flow sets" that seamlessly integrate lightweight, high-launching woods, hybrids and short irons in a smaller set (eight to 13 clubs) with larger loft gaps. Clubs like the ones shown here are different from anything the guys play (weight, lofts, flexes, lengths) to optimize the performance of slower swingers. —SS

CLEVELAND
HIBORE BLOOM

STREET PRICE
 \$1,000 (eight clubs, bag)
 The set has a 15.5-degree high-launching HiBore Bloom HT driver (above) with a low center of gravity (CG), a HiBore 5-wood, five HiBore XLI irons, and a Classic II mid-mallet putter—all in a lightweight, women-specific design. (Each club is also sold separately.) Other options include an 11.5-degree driver; 3- and 7-woods; 3-, 4- and 5-hybrids; 3-iron through SW; a 42-degree Niblick chipper and a VP509 mallet putter.

PING
RHAPSODY

STREET PRICE
 Driver: \$300; fairway woods: \$220; hybrids: \$150; irons: \$113 (each)
 Ping doesn't believe in pre-packaged set configurations. Instead, the company encourages women to take advantage of its custom-fitting program to create the ideal set from an array of wide-soled, high-lofted Rhapsody drivers, irons, hybrids and fairway woods (all the way up to the 30-degree 9-wood shown here). Clubs are available in two shaft flexes and multiple lie and length options.

ADAMS
DESIGNER TECH

STREET PRICE
 \$1,500 (13 clubs, Keri Golf designer bag)
 This limited-edition set (only a thousand were made) includes women-specific versions of the Insight Tech a40S 460cc driver, 3- and 5-woods, six Idea Tech a40S hybrid irons (above), three wedges and a mallet putter. The woods and hybrids have the Adams Boxer technology to help increase stability on off-center hits. Each club comes with a lightweight Graphite Design Pershing shaft.

COBRA
TRANSITION-S

STREET PRICE
 \$700 (eight clubs)
 Cobra combines 4- and 5-utility woods, 6- and 7-hybrids (above) and wide-soled short irons (8-iron through sand wedge) to create optimal turf interaction and forgiveness on shots into greens. The lightweight Aldila Proto-HL shaft is designed to help launch the ball high and increase clubhead speed. The clubs can be matched to a Cobra Speed LD-M women's driver and fairway woods to complete the set.

MIZUNO
SORA

STREET PRICE
 \$800 (11 clubs, bag)
 With 4- to 5-degree loft gaps between clubs, this set features a 15-degree, 460cc titanium driver, two low-profile fairway woods, one hybrid, six extreme cavity-back middle and short irons (above) and a mallet putter with a soft polymer face. The result is consistent, noticeable yardage differences between clubs. The woods and irons come in regular or petite lengths to accommodate golfers of different sizes.

CALLAWAY
GEMS

STREET PRICE
 \$600 (eight clubs, bag)
 Designed for the beginning female player who needs a lot of help getting the ball airborne, the Gems set comes with a draw-bias, high-lofted titanium driver and stainless-steel fairway wood, one hybrid, three short, wide-soled i-Brid irons, a chipper and a women-specific 2-Ball putter (above). Each club is designed to launch the ball high, even at slower club-head speeds.

CLEVELAND
CG12/CG12 DSG

STREET PRICE
\$110

TECH TALK

DSG (dynamic sole grind) technology adds another element to the classic CG12 design. The leading portion of the sole is narrow and has a high bounce angle. The wider trailing edge has a low bounce angle. This allows a square face to deliver the performance of standard bounce yet lowers the leading edge when the face is open.

PLAYER COMMENTS

(M) "These grooves are amazing—one, two hops, then ffffft." ... (L) "The way it nips the ball, there must be something to this DSG sole." ... (M) "It hits every ball crisply. Automatic out of the sand."

HOT

Cleveland continues to take its classic designs and make them more versatile. The finishes are appealing, and the grooves are effective without ripping up the cover of your golf ball. If you can't find what you need in the many lofts and bounce angles available, then you're beyond hope.

NOT

The DSG model might require care on especially tight lies.

THE OPTIONS

Loft/bounce: CG12: 46/8, 48/8, 50/10, 52/10, 54/8, 54/12, 54/14, 56/10, 56/14, 56/16, 58/8, 58/12, 58/14, 60/4, 60/10, 60/14, 64/12; DSG: 52/10, 54/12, 56/14, 58/10, 60/3, 64/3

CLEVELANDGOLF.COM

CLEVELAND
CG14

STREET PRICE
\$110

TECH TALK

A light weight viscoelastic "gelback" material has been positioned behind the hitting area to improve perimeter weighting, diminish vibration on mis-hits and provide feedback. It features the same "zip groove" technology used in the Cleveland CG12. Zip grooves are designed to have the most volume and sharpest edges of any groove in company history. In addition, the CG14 has the familiar toe-and-heel sole grind for improved club-ground interaction.

PLAYER COMMENTS

(M) "A perfect shape and a very stable head through any type of shot." ... (L) "You can feel this club more in your hands than others." ... (T) "Very forgiving. If you hit it fat, you'll still get it on the green."

HOT

The cavity gel enhances this classic design and improves the feel, something that any caliber player can appreciate. The "standard" and "low" bounce options are distinct and easily understood.

NOT

There are fewer options than the CG12.

THE OPTIONS

Loft/bounce: 46/6, 48/6, 50/8, 52/10, 54/9, 54/12, 56/11, 56/14, 58/10, 58/12, 60/8, 60/12, 64/12

TITLEIST
VOKEY DESIGN SPIN MILLED

STREET PRICE
\$110

TECH TALK

The retooled Spin Milled line features grooves that are made using a small circular saw that produces deep, precision cuts with a tighter groove-edge radius. This increases the volume of the grooves to help retain spin from the rough. The groove angle is steep on higher lofts (for spin) but less extreme on lower lofts (to avoid excessive spin on full shots). The soft 8620 carbon-steel heads come in three finishes (tour chrome, oil can and black nickel).

PLAYER COMMENTS

(M) "An all-around terrific wedge. Whatever you need it to do, it does: bump-and-run, flop or spin. And it's perfection on the long shots." ... (L) "The face is neither too hard nor too soft, and it's easy to open the face or close it." ... (T) "It lives up to its name. It's very adaptable."

HOT

Sixteen majors have been won with Bob Vokey clubs. This updated set reflects everything he knows about wedges.

NOT

Left-handers don't have access to all of the 17 loft/bounce options.

THE OPTIONS

Loft/bounce: 48/6, 50/8, 52/8, 54/8, 54/11, 54/14, 56/8, 56/11, 56/14, 58/4, 58/8, 58/12, 60/4, 60/7, 60/10, 62/7, 64/7

ADAMS PUGLIELLI 418 TOUR

STREET PRICE
\$100

TECH TALK

The forged 8620 carbon-steel head features a high-density polymer weight chip in the back to dampen vibration. The chip is factory-adjustable, which helps keep the swingweight consistent after the grinding is done. Grooves are milled to USGA limits on width and depth. Sound and feel are controlled through an insert and a rear pocket cavity featuring multiple thicknesses. The head shape is angular like a traditional pitching wedge in the lower lofts and rounded in the higher lofts.

PLAYER COMMENTS

(M) "Might not look like you can hit delicate shots with it, but you can." ... **(M)** "Cuts through the sand nicely and is good in the rough. Works great on long shots." ... **(L)** "This is the club of the year for me. I love the feel, and it's great around the greens."

HOT

Through bending, this traditional-looking wedge accommodates 105 combinations of loft, bounce and offset.

NOT

Those who need 105 choices are not getting their equipment advice from this magazine.

THE OPTIONS

Loft/bounce: 48/8, 50/8, 52/8, 52/10, 54/10, 56/10, 56/12, 56/14, 58/8, 58/10, 60/4, 60/6, 60/8

BOBBY JONES PELZ WEDGE

STREET PRICE
\$150

TECH TALK

The face insert is made from Carpenter 440XH steel, a wear-resistant alloy typically used in industrial bearings and valve assemblies that permits the grooves to last for years instead of months, according to designer Jesse Ortiz. The hard insert is countered with a 3M structural-bonding membrane that is slightly spongy, giving it a shock-absorbing effect.

PLAYER COMMENTS

(M) "Rounded toe and leading edge set up well for all types of shots." ... **(L)** "Easy to use out of the thick stuff and from tight lies." ... **(L)** "From the sand this is outstanding, and it has great turf interaction. I would buy this sand wedge."

HOT

It's intriguing to imagine having the equivalent of new grooves even after years of use and abuse. With these you won't have to stockpile enough to get you through to 2024, the anticipated end of the grandfather period for clubs with old grooves.

NOT

It doesn't have the variety of loft and bounce options desired by better players.

TECH TALK

The C-grind sole (in which material is removed from the heel and toe of the sole to improve playability) is a result of feedback from tour players, who wanted more versatility on a variety of lies and turf conditions. Other updates include a tighter angle on the leading-edge radius, and the "mack daddy" grooves, once available only in the higher lofts, have been added to three models (52, 54 and 56 degrees). The company's two traditional finishes (white chrome and vintage) have undergone some tweaking as well.

PLAYER COMMENTS

(M) "I guess [designer] Roger Cleveland improved on a good thing." ... **(L)** "It has great turf interaction and feels super smooth on long shots. Doesn't dig, even on tight lies."

HOT

When Callaway's tour players speak, Roger Cleveland listens, and the consumer benefits.

NOT

The grooves might impart too much spin for players without the ability to control it.

THE OPTIONS

Loft/bounce: 48/10, 50/12, 52/12, 54/14, 56/14, 58/9, 58/10, 60/9, 60/10, 62/9, 64/9

TRACKMAN SAYS
MIND THE GAP

A set of new irons can solve one problem but create another: You might have to rethink your wedge situation. Because pitching wedges come in different lofts, the carry distance between them and your highest lofted wedge changes.

Our test player hit his 56-degree sand wedge an average of 88 yards and his 47-degree pitching wedge an average of 110 yards. This leaves a 22-yard gap to fill. If he finds a club that goes about 100 yards (likely a 52-degree wedge), he'll split that gap with about 10 yards on each side. And because it's easier to choke down or take a three-quarter swing rather than muscle a sand wedge, he'll learn to hit the gap wedge as short as 90 yards. However, if he buys a super game-improvement set with a 45-degree pitching wedge, which our tester hit 117 yards, he'll have a 29-yard gap to worry about. To get optimal spacing he might consider changing to 50-, 54- and 60-degree wedges, or maybe 52- and 58-degree wedges.

Golf Digest Top 50 teacher Jim Suttie suggests 4-degree gaps between your clubs, but if you're not sure, a number of fitting systems can determine how to fill out your new set. One example: Ping's nFlight fitting system can recommend a full-set makeup after just a few swings with three clubs. —MA

TAYLORMADE Z TP

STREET PRICE
\$120

TECH TALK

The milled "Z" grooves are named for the cutting tool that the company says is more advanced than the one used for its previous Y-cutter grooves. The result is a 10 percent increase in groove volume that helps channel debris and maintain maximum spin. The C-grind sole available on some lofts increases the club's versatility. Its smoked PVD finish helps diminish glare.

PLAYER COMMENTS

(M) "You can fly it to the hole and it stops, even from the rough, which is fun." ... **(M)** "That dark-brown finish is easy on the eyes." ...
(T) "The leading edge stays down when you open it, so you know you'll hit it crisp."

HOT

It features the qualities (grooves, sole, look) better players seek in a wedge. That nice, soft feel is the result of the channeled area on the backside, an innovation that isn't new but remains effective.

NOT

Its loft and bounce options are limited. Just one finish probably won't satisfy everyone. The lack of a C-grind sole on the 60-degree model is curious.

TODD KERSTING IMAGES CHARLES LABERGE

INSTRUCTION TIPS COME FACE TO FACE WITH YOUR WEDGE

You probably know that the bounce on the bottom of your sand wedge is there to help you get out of a bunker. You can also use it to hit effortless pitch shots, particularly from tight lies. I see

many amateurs chunking shots around the green as a result of the clubface sticking into the ground. That's because the shaft is leaning too far forward at impact, and the leading edge gets stuck. This chunk can be avoided. A good swing thought to help you use the bounce: Try to finish the swing with the face of the wedge looking back at you. To achieve this finish position, you have to allow the club's bounce to glide across the ground (the shaft will be nearly vertical through impact). You'll feel and hear more of a thump through the grass, and the ball will fly high and land softly. This face-to-face image also helps to get you to accelerate through impact. **TODD KERSTING**

The head is milled from hot-rolled A36 carbon steel and features a traditional plumber's neck with one-quarter-inch of offset. You cannot purchase a putter from this company, even online, without being fitted. Its Tri-Fit Method employs the Pythagorean Theorem in which a^2 (the distance from the hands to the feet) plus b^2 (the distance from the feet to the ball) combine to solve the dimensions for c^2 (your appropriate shaft length and lie angle).

PLAYER COMMENTS

(T) "It's a great fitting idea. With this system you could buy a putter like you'd buy a suit." ... **(T)** "Felt like I could get right into my stance." ... **(L)** "Impact was loud for my liking, more like a 'knock' than a 'click.'"

HOT

Having three head weights (335, 350 and 365 grams) to match different shaft lengths exemplifies the company's commitment to fitting.

NOT

The matte-nickel finish and sharp corners at almost every edge make for a somewhat militaristic aesthetic.

TP MILLS TRADITION II XL

STREET PRICE
\$360

TECH TALK

The first one-piece forged plumber's neck in the 40-year history of the company is available in 1030 carbon steel and 304 stainless steel. Instead of cutting loft into the face, the "parallel-pocket" design ensures that the distance between the front and back walls of the face is a constant thickness. The milling process is specifically engineered to avoid creating faces that appear closed in the address position.

PLAYER COMMENTS

(M) "It's got a sweet, pitched sound." ... **(T)** "I enjoyed solid hits everywhere on the face, and no wavering on off-center strikes. Classy." ... **(L)** "The face is softer than the gunmetal finish would indicate." ... **(T)** "The grip is great, too. It fits nicely across the palm and sets in easy."

HOT

Each putter is hand-milled by David Mills, who learned from his father, legendary founder Truett P. Mills.

NOT

Availability is limited. Mills isn't running off 10,000 of these at a time from his shop in Tuscaloosa, Ala.

GOLD

ODYSSEY
WHITE HOT TOUR #1

STREET PRICE
\$150

TECH TALK
The elastomer-core face insert addresses feel and stability. Its surface is infused with urethane to augment sound, and the weighting scheme of the insert has been shifted toward the perimeter to increase moment of inertia (MOI). The rationale behind using a 355-gram head for 33- and 34-inch shafts and a 340-gram head for 35-inch shafts is to keep the torsional balance—or how heavy the putter feels in a player's hands—constant.

PLAYER COMMENTS
(T) "This insert could make a Pinnacle feel soft." ... (L) "Roll was end over end, and this alignment line seemed really simple yet effective." ... (T) "I could putt with my eyes closed, and I would still know this putter was for me. Something about its weighting just felt so right."

HOT
The burnt tour finish provides a regal appearance and won't reflect glare even in the brightest sunlight.

NOT
Some panelists complained of distance-control issues with the soft insert.

INSTRUCTION TIPS
LET THE SHAFT DICTATE YOUR PUTTING PATH

Whether you prefer a mallet putter or a blade like the ones on this page, your putting path does not have to change. However, if you prefer a straight-back, straight-through path over an

arc path, a center-shafted putter (above) could help you. Why? When the shaft is positioned in the center of the putter, instead of near the heel, the amount the putterface opens or closes during the stroke is reduced. If you putt on a straight line, you don't want the face to open or close at all. Not sure if you putt this way? Lay a shaft on the ground, and make a few practice strokes with your putter on top of it. If your putter doesn't trace the shaft and moves closer to your body, you're probably more of an arc putter. **JASON GUSS**

HEAVY PUTTER

K4

STREET PRICE

\$170

TECH TALK

At 750 grams, this toe-droop design is about 50 percent heavier than a conventional blade. However, because this is the introductory piece of the company's Mid-Weight series, it has been scaled back from the usual model weight of 850 grams. The idea behind a weighty putter is to engage the larger muscles in the body to create a better pendulum stroke.

PLAYER COMMENTS

(L) "Releases automatically. The block to the right is no more."... (T) "Great on short putts, but distance control could be an issue on long ones."... (M) "Much sleeker than the company's past models. A little bit of a hollow feel, but I like the simplicity of its alignment."

HOT

Keeps your stroke smooth even after the second cup of coffee. The thin topline and slightly reduced weight will make the company's concept more palatable to a wider pool of golfers.

NOT

A beefier shaft might eliminate the faint wobbly feel.

SEEMORE
FGP2 STAINLESS

STREET PRICE
\$185

TECH TALK

The distinctive asset of this milled 303 stainless-steel head is the company's "rifle-scope" technology. The bottom portion of the shaft is painted black to conceal a red dot located between two white aiming lines on the heel. Seeing the dot indicates that the setup is incorrect or the head is not releasing properly during the stroke. A new option is the "whistle" offset shaft that permits golfers with forward presses to utilize the red-dot system.

PLAYER COMMENTS

- (M) "Their technology works for me." ...
- (M) "Unless you're custom-fit, I think the alignment system could be a distraction." ...
- (T) "Might be one of the ugliest putters out here, but the roll was excellent." ...
- (T) "It's simply a great-rolling putter."

HOT

The new whistle offset shaft cleverly addresses (pun intended) what used to be a problem: The Zach Johnson "hands-back" style was a prerequisite. It no longer is.

NOT

The nickel-satin finish reduces glare, but looks an awful lot like Civil War gray.

TECH TALK

The 303 stainless-steel frame and lightweight aluminum core save weight, which is concentrated into heavy screws in the rear cartridges. The screws are movable so total weight and face balance can be customized. At first glance it appears to be a shrunken version of its older sibling, but the black wings have been pulled inward, and the white alignment decal has been abbreviated for a simpler look. With an MOI of 5,500, it still has 82 percent of the stability of the previous (and bigger) version. The face has the Rossa AGSI+ groove insert.

PLAYER COMMENTS

(L) "Still looks like a spaceship with two engines, but I'm OK with that." ... **(M)** "The way the Spider should've been made in the first place." ... **(L)** "Heavier than it looks, which is good. Rolls beautifully."

HOT

A symphony of function over form. The two hosel options—plumber's neck or double-bend—nicely anticipate different tastes.

NOT

Even 82 percent of the world's fattest man is still a lot to look at.

TECH TALK

The monochromatic head (20-20A shown), shaft and grip are designed to optically blend into the putting green so the white alignment stripes stand out. The most significant change from last year's introductory mallet is that the open spaces in the head have been filled in, creating a solid green shape. The benefit of the large, square design is a high MOI that mitigates twisting on off-center strikes.

PLAYER COMMENTS

(L) "Sometimes I have trouble setting up closed, but this corrected that problem." ... (T) "The green-white concept really does help, but I found the face profile a smidge high." ... (T) "You could leave this on the putting green and never find it again." ... (M) "Good touch on short ones; great feedback on long ones."

HOT

Free your mind and free your stroke. When you can't see the putter, all you can (and will) think about is speed.

NOT

The extra-large sole has the potential to get scuffy if you're not stroking it well.

ODYSSEY
WHITE HOT XG 2-BALL F7

STREET PRICE
\$170

TECH TALK

What we have here is a fusion of the company's two most popular alignment systems, the 2-Ball and the parallel "fangs" of #7. With 120 grams repositioned in the fangs, this model has an MOI of 4,800, which is 40 percent more than the original 2-Ball. As with most mallets in the XG line, it includes a double-bend shaft with a shaft's width of offset as well as the two-piece elastomer-based face insert with a textured sweet spot.

PLAYER COMMENTS

(M) "Center hits and off-center hits all go the same. I could get used to this." ... (T) "Looks like it can balance itself. I think I could set this putter up, walk away, and it would still be lined up at the hole when I got back." ... (L) "One of the softest inserts." ... (T) "A lot of features, yet it's simple."

HOT

For anyone struggling with alignment issues, this could be the best cure around. The combination of bars and balls is as effective as it is bold.

NOT

It looks like the Millennium Falcon.

SILVER

ODYSSEY
WHITE HOT XG SABERTOOTH

STREET PRICE
\$170

TECH TALK

Two dense, semicircular fangs account for 132 grams, which spread 37 percent of the head's total weight away from the CG location to increase stability on off-center hits. The soft, elastomer-backed face insert is designed to complement multilayer balls and features a textured sweet spot to enhance feel. Parallel bars and two stacked aiming dots assist with setup.

PLAYER COMMENTS

(M) "Real easy to rotate the clubface through the ball." ... (L) "I'm looking for a 'click' that is not tinny, and this provides that. It's easy to set down square, perhaps the easiest putter ever to align." ... (T) "Good stuff. How can a putter be solid and soft at the same time?" ... (L) "Nice contrasting colors." ... (T) "Good for Generation X. Too flashy for Baby Boomers."

HOT

The optical bonus of the round shape is that it corresponds perfectly with the dimensions of a cup.

NOT

Shaft-length options (three) and hosel choices (one) seem parsimonious.

ODYSSEY
WHITE HOT XG TERON

STREET PRICE
\$170

TECH TALK
The design is similar to Odyssey's Sabertooth, especially the idea of pushing weight toward the perimeter to improve stability on off-center hits. The outer wings occupy 147 grams, or 41 percent of the head's total weight, helping it achieve an MOI of 5,750. The face has the XG line's soft and textured elastomer-backed insert. Alignment features borrow the Marxman's white bars.

PLAYER COMMENTS
(L) "A no-brainer to align. If you can't get this pointed at the hole, just give up." ... (T) "Busy-looking, but it draws your eyes right to the center spot." ... (L) "I love scooping up balls with it." ... (M) "The more putts you make with it, the prettier it looks."

HOT
Having the highest MOI of any putter in the Odyssey line makes for serious bragging rights. Its stability can help win nassaus, then the wings can help pop the tops to the free beers at the clubhouse.

NOT
Forget to put the headcover on, and the sharp ends can give a nasty scratch.

THE NUMBERS

Face width..... 87 mm	Shaft lengths..... 33 in
Front to back..... 92 mm 34, 35 in

PING
KARSTEN SERIES CRAZ-E

STREET PRICE
\$120

TECH TALK
A lightweight elastomer insert in the cavity behind the face is designed for double duty: reduce vibration and redistribute weight to the perimeter for a high MOI. The body is investment cast from 17-4 stainless steel and is face-balanced. Two tones of blue accentuate the multiple-level alignment feature.

PLAYER COMMENTS
(L) "I like that it doesn't have an insert on the face. Just the solid feel of steel." ... (M) "Feels like it just glides across the grass. This one's impossible to miss with from short range." ... (T) "Fairly heavy, so it promotes the use of the big muscles in the stroke." ... (M) "If you read the putt right, it's going to go in."

HOT
If you prefer the traditional sound of steel but want a modern shape, Ping has played matchmaker with this model. And the price tag makes it a cheap wedding.

NOT
Gunmetal gray and muted blues will be a welcome subtlety to some but will feel industrial and boring to others.

RIFE
BARBADOS TOUR MALLET

STREET PRICE
\$180

TECH TALK
The computer-milled 304 stainless-steel head has a notch cut into the back of the topline directly above the sweetspot. When the central white aiming line appears in the notch, you know your eyes are over the ball. Because the horizontal grooves are designed to grip the cover of the ball and lift it from its depression on the green, the face has a strong loft of 2 degrees. The shaft features a half-degree of kickback, meaning it leans slightly toward the right eye.

PLAYER COMMENTS
(M) "Very balanced. Doesn't wobble at all when you set it down." ... (L) "It makes sense visually." ... (T) "Three prominent lines make alignment a cinch, but they'll distract some players during the stroke." ... (L) "Ball comes off syrupy. One of the most consistent rollers out here."

HOT
The two-tone look of the tour-black finish and polished grooves puts it high in the running for most attractive mallet on our list.

NOT
If the putt on 18 must drop, do you want to worry about an alignment notch?

THE NUMBERS

Face width..... 84 mm	Shaft lengths..... 33 in
Front to back..... 77 mm 34, 35 in

**TAYLORMADE
MONZA SPIDER**

STREET PRICE
\$200

TECH TALK

The combination of a large steel frame and a light aluminum core allows more weight to be pushed rearward. The purpose is a CG depth that is 40.5 millimeters back from the center of the face. Because the movable weight cartridges extend farther from the heel and toe, 60 percent of the head's total weight lies outside the center portion, as defined by the outskirts of the white alignment graphic. As a result, the MOI is 6,750.

PLAYER COMMENTS

(T) "The adjustable weights really give you the chance to get it the way you want it." ... (M) "Within six feet, it's deadly." ... (M) "A lot going on visually, but not too distracting. Loved the roll of the insert." ... (T) "Real easy to line up; the ball feels like part of the putter." ... (T) "Last year I was like 'whoa,' but now I like the look."

HOT

One of last year's hottest-selling mallets. About 50,000 Americans can't be wrong.

NOT

Full-court-press alignment graphics could upset the stomachs of some golfers.

THE NUMBERS

Face width.....	92 mm	Shaft lengths.....	33 in

BEST VALUES

HOW ABOUT A FULL SET FOR LESS THAN \$1,000?

We know that \$500 drivers, \$370 fairway woods and \$1,500 iron sets might be difficult to afford in today's economic climate. We also know that you can get quality clubs for a lot less. Here are two options to consider: First, there's the exceptional value of a used set of clubs

(preferably former Hot List selections). Visit sites such as valueguide.pga.com, callawaygolfpreowned.com or golfexchange.com to find good deals. Or you can try this list of our favorite new-club values. This set of 14-clubs will cost you \$980 (\$1,040 with bag).

DRIVER, \$220

Tour Edge's GeoMax 2 has a 20 percent larger face and a 22 percent deeper center of gravity (CG) than last year's model because of four internal weight pads deep in the sole (lofts: 9, 10.5, 12, 15; touredge.com).

FAIRWAY WOOD, \$150

A good enough club to be used by Padraig Harrington (winner of two majors last year), **Wilson's Fybird** has heel and toe sole scallops that create a railed sole (lofts: 15, 18; wilson.com).

HYBRID, \$150

A fresh idea on the hybrid, the **Snike Eyes Q4-U** features a concave sole that's designed to reduce ground contact. Four weight ports on the rear perimeter help push weight low and deep (lofts: 15, 19, 23, 27, 31; golfsmith.com).

IRONS, \$200

The **Hireko Acer XK** series of irons comes in three versions (Standard, HT and Pro), but each set of eight irons has an undercut cavity for optimal forgiveness and a low CG. On the Pro version, the sole on the cast 431 stainless-steel head gets narrower, and the blade length gets shorter (hireko.com).

PUTTER, \$100

The lightweight polymer face insert and three-pointed mallet shape on the **Nike Oz 6** push weight to the extreme heel and toe for optimal stability (nikegolf.com).

WEDGE, \$80

Weight has been redistributed to the flange on the **Lynx LXW** to lower the CG. The grooves cover nearly 6 percent more area than previous models (golfsmith.com).

BAG, \$60

The **Sunday X-Strap** from **Sun Mountain** weighs just two pounds, including a dual-strap system with hip padding, four pockets and a vinyl-reinforced bottom (sunmountain.com).
