

## KEYSTONE

The Keystone Series GR is a heavy duty industrial resilient seated butterfly valve aimed at general purpose applications.

### Features

- Wafer and lugged body design with face-to-face dimension, according to EN 558 Series 20 and API 609.
- Designed according to EN 593 and API 609.
- The seat is field replaceable and fully isolates the body and shaft from the flow.
- Primary shaft sealing exceeds the pressure rating of the valve and prevents leakage through shaft area to atmosphere.
- A secondary shaft sealing provides back-up safety.
- A molded-in O-ring in the seat for flange sealing eliminates the need for gaskets.
- Shaft seals prevent moisture penetrating into the shaft area.
- The two piece shaft allows for a thin disc and provides minimal obstruction to flow (up to NPS 12).
- Rounded polished disc edge gives full concentric sealing, lower torques, longer seat life and drop-tight shut-off.
- Body locating holes allow ease of installation and centering between the flanges.
- Extended body neck allows for pipe insulation.
- Top and bottom shaft bearings for optimized support and minimum friction and decreased torque.
- Top bushing absorbs actuator side thrust loads.
- All valves comply to Pressure Equipment Directive (97/23/EU) Module B1 + D, CE Marking.
- Available approvals: KIWA, ABS, WRAS, ACS, NSF/ANSI STD 61.

### General application

Water, air, dry bulk conveying etc. These valves are for any service where a drop-tight shut-off with maximum flow area is required.

### Notes:

- (1) 'Q' dimension is the minimum allowable pipe or flange inside diameter at the centered body face to protect the disc sealing edge against damage when opening the valve.
- (2) 'H' dimension refers to flat on shaft.
- (3) Weight may vary depending on trim materials used.
- (4) NPS 2 - actual shaft dimension is 1/2 in x 1/3 in A/F and is fitted with an adaptor to produce a BAC connection.

### Torque application factor categories

#### Application I

Clean liquid lubricating media (water, clean oils, lube oil, mineral oil, etc.); and with no deposit or chemical attack, valve operated at least once a week.

Temperature range from 32°F to maximum temperature rating of the elastomer seat.

#### Application II

Other liquid media and lubricating gases (aqueous liquids, such as food & beverage, water, etc.); and with minor deposit or chemical attack, valve operated at least once a month.

Temperature range from 32°F to maximum temperature rating of the elastomer seat.

#### Application III

a. Dry non-abrasive media or gases (non-abrasive powders and dry gas); or

b. Fluids with moderate deposit or chemical attack; or

c. Valves operated less than once a month.

Temperature range from 32°F to maximum temperature rating of the elastomer seat.

#### Application IV

a. Dry abrasive media and degreasing applications (sand, cement, silicone free, oxygen cleaned); or

b. Liquids with severe deposit; or

c. Valves not frequently operated (once a year).

All above with temperature range from 15°F to maximum temperature rating of the elastomer seat.

#### Notes:

- For applications with temperatures above or below the guidelines above, please consult factory.
- For dry service valves it is suggested to use U/C discs (reduced diameter) when service conditions are less than 50 psi.

### Shaft <sup>(1,2)</sup>

<b>1</b> – 316 stainless steel	<b>6</b> – Duplex
<b>2</b> – 431 stainless steel	<b>7</b> – Super duplex

Notes:

- (1) The standard material is 431 stainless steel.  
316 stainless steel shaft is available as an option in NPS 2-12.  
(2) NPS 14-36 valves with a super duplex disc will have a super duplex disc screw.  
All other disc materials will have a duplex disc screw.

### Seat

<b>E</b> – EPDM (Food grade)	<b>F</b> – Fluoroelastomer (FKM)
<b>N</b> – NBR (Food grade)	<b>W</b> – White NBR (Food grade)
