## COLLECTOR CAR COLORS REVOLUTIONIZING THE CUSTOM CAR MARKET

A UNIQUE PARTNERSHIP OF CARL'S COLLISION,  
FACTORY FIVE RACING & SHERWIN-WILLIAMS  
AUTOMOTIVE FINISHES.

Raging Metallic Red. Venom Yellow. Mystic Midnight Blue.  
White Lightning.

Hot rod colors inspired by the likes of Danny Zuko, J.J.  
McClure, Cole Trickle, or James Bond even?

Not quite. These awesome colors represent a smattering  
of the new names for the all-new line of custom Factory  
Five Racing paint colors—17 in all—developed via a  
triple-crown partnership between Factory Five Racing,  
Sherwin-Williams Automotive Finishes, and Carl's  
Collision. The hues consist of four blues, three whites,  
three reds, two yellows, and one each of silver, gray,  
black, orange, and green.

"Lots of folks who visit us at the top auto shows, including  
SEMA, or come to our South Boston showroom, are  
always asking us what colors we use to paint our cars,"  
says Dave Smith, president of Factory Five Racing. "Since  
our exclusive paint shop, Carl's Collision, exclusively uses  
Sherwin-Williams Automotive Finishes, we looked to both  
of them to create a limited custom line of paints featuring  
the most popular colors used on our favorite kit cars."

Selecting proper colors is the number one confusion when  
it comes to our hot rod customers' concerns," says Carl  
Garcia, president of Carl's Collision in Fall River, Mass.  
located in close proximity to Factory Five." They have  
hundreds and hundreds of colors to choose from so I  
enjoyed the challenge of narrowing the color palette down  
to the most popular colors to recommend to them."

For more than a year, Smith and Garcia were talking  
about putting together a selective line of paint colors for  
the Factory Five kits. Once they pulled Sherwin-Williams  
Automotive Finishes Marketing Director Steve Spirko,  
(who also heads up the Rod & Restoration division) into  
the conversation, it took about two years to debut the colors  
at the 2014 SEMA show. Factory Five built ten demo cars  
to hold all the paint colors. Garcia committed personally  
to performing all the spray outs.

"To have access to the biggest name in kit cars with Factory  
Five is a great promotion for us," says Spirko. "Our  
partnership with Factory Five and Carl's Collision allows  
us to keep up with the latest trends in car colors only  
making our program stronger. It was so important to get  
the colors right and it took a lot of patience on their part."

**Makita® 7" Electronic Polisher-Sander with  
Polishing Kit**

Introducing Makita's new 7" Polisher powered  
by a 10 AMP motor for continuous operation.  
The Makita 9227CX3 polisher is fast and  
powerful for clear coat finishes and fantastic  
for ultra-slow polishing. Its variable-speed  
dial (from 0 to 3,000 RPM) gives maximum  
control for buffing applications. The soft start  
feature ensures smooth start-ups and the wire  
mesh intake covers prevents wool fibers and  
other debris from entering the motor. Comes  
with a heavy duty nylon bag and a 7" foam  
polishing pad.

Makita® 7" Electronic Polisher Kit

**Ask**

No one knows this better than Tim Schmidt, Sherwin-Williams Automotive Finishes' Capital Equipment Buyer who works closely with body shop owners and managers converting from solvent-borne to waterborne paint. "There's no getting around the new U.S. EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP) guidelines regulating the use of volatile organic compounds (VOCs) in paint," Schmidt explains.

Most shop owners are opting to stay ahead of the regulatory curve. "By switching to waterborne basecoats, you'll have a head start in complying with future regulations that

## ARE YOU READY FOR WATERBORNE?

THE HEAT IS ON FOR BODY SHOP OWNERS TO QUICKLY CONVERT FROM TRADITIONAL SOLVENT-BASED PAINTS TO NEWER WATER-BASED ONES.

require further reductions of VOCs and/or hazardous air pollutants (HAPs)," says Schmidt.

Sherwin-Williams Automotive Finishes knows it's not exactly a cakewalk for paint shop operators to convert their paint spraying system. The outlay of new equipment, waste disposal, and adjustment period of the workers are major factors.

Sherwin-Williams Automotive Finishes doesn't want to hinder any shop's production time, so it developed a process to ease shop owners with the conversion.

### SHERWIN-WILLIAMS AUTOMOTIVE FINISHES WATERBORNE CONVERSION PROCESS.

#### STEP 1

Contact your local Sherwin-Williams Automotive Finishes Representative to schedule an in-depth facility assessment. The analysis will focus on evaluating your facility's current spray booth, air movement/supply, and spray equipment.

#### STEP 2

Review the comprehensive results of the assessment with your Sherwin-Williams Automotive Finishes Representative to discuss whether or not your facility is waterborne ready. If there are areas that require attention, he/she will give several equipment options based on your businesses specific needs.

#### STEP 3

From spray guns to spray booths, Sherwin-Williams Automotive Finishes has the expertise to prepare your facility to become more productive and more profitable.

#### Tracerline® Complete LeakFinder™ A/C and Fluid Starter Kit

Everything the professional needs for complete A/C and fluid detection. Features a fully loaded kit with inspection lamp, syringe A/C dye injector, hose/coupler with check valve and R-12 adapter/purge fitting, Fluoro-Lite® universal dye, Dye-Lite® All-In-One™ standard dye, Dye-Lite® coolant dye, GLO-AWAY™ dye cleaner, fluorescence-enhancing glasses and under hood labels.

Tracerline® Complete Leak Detection Kit 9

DLTP9367 – **\$468.49** was \$668.93

#### Tracerline® Marksman™ II Ultrasonic Diagnostic Tool

Hear sounds signifying leakage problems such as air brake, compressed air, vacuum, exhaust, refrigerant, tires and more before they lead to major breakdowns. An easy-to-use touch-control sensitivity pad and power switch, 5-LED signal intensity indicator, and audible alarm easily pinpoint the exact problem source.

Tracerline® Marksman II Ultrasonic Tool 8

DLTP8621 – **\$67.49** was \$96.03

#### Tracerline® OPTIMAX™ 400 Cordless, True UV Leak Detection Flashlight

This cordless leak detection flashlight emits less visible light so leaks are clearer and easier to spot. It features a UV LED that causes dyes to fluoresce more brilliantly and with greater contrast. It is pre-focused to optimize beam and fluorescent response without any adjustments.

Tracerline® OPTI-PRO TrueUV Flashlight

DLTP8610CS – **\$63.99** was \$90.70

#### Infratech® Speed Dry System and Medium Wave Heat Lamp

The Infratech® Speed Dry System (IF151015) combines Speed Dry with an infrared heater for faster drying times. Units can be plugged into 15-amp outlet and can be operated together or separately. The Infratech® Medium Wave Heat Lamp is a 20 volt, 13 amp, 1500 watt system and features a 2' x 3' curing area.

Speed Dry System

IF151015 – **\$478.49** was \$613.46

Medium Wave Heat Lamp

IF141000 – **\$185.49** was \$281.60

## "GREEN MEANS GO"

Sherwin-Williams Automotive Finishes sustainable partnership with NASCAR Teams Roush Fenway Racing & HScott Motorsports

**AWX**  
Performance Plus

OFFICIAL AUTOMOTIVE PAINT OF NASCAR

The Roush Fenway Racing team is on pace in the NASCAR environmental initiatives race, thanks in part to Sherwin-Williams Automotive Finishes AWX Performance Plus™ waterborne refinish system, which is used on each of its six race cars.

"We are the official automotive paint of NASCAR and partner with more than a dozen other NASCAR teams that currently use Sherwin-Williams Automotive Finishes," says Bobby Ray Moody, Director of Motorsports for Sherwin-Williams Automotive Finishes. "And because Roush Fenway Racing is one of the largest and most successful racing teams competing in NASCAR they have shown a commitment to balancing environmental protection, social responsibility, and economic progress without impacting on-track performance."

Sherwin-Williams has a long history of collaboration and teamwork with Roush Fenway Racing. Whether it's working together on the NASCAR circuit through their strong sponsorship relationships, or testing paint and appearance opportunities behind-the-scenes in the shop, the two organizations work extremely well together.

Roush Fenway found the AWX Performance Plus™ system from Sherwin-Williams Automotive Finishes not only more than met their expectations when it came to being environmentally sound, but also didn't slow production time. It's because AWX Performance Plus™ features an easy application, fast drying basecoat for superior color match while at the same time meeting the strictest volatile organic compounds (VOC) limits in North America.

Sherwin-Williams Automotive Finishes proudly participated in the second annual NASCAR Race To Green initiative last Spring when the No. 51 HScott Motorsports Chevrolet driven by Justin Allgaier ran a special Sherwin-Williams Automotive Finishes paint scheme using the AWX Performance Plus™ system featuring the NASCAR Green logo.

"We aim to help teams cross the finish line and ensure that their cars and their sponsors always look good circling the track," says Moody. "Roush Fenway and our other NASCAR team partners rely on the shine, gloss, and durability of our paints to withstand intense heat and grueling speeds on the track."

# FASTLINE™

### FASTLINE® Body Fillers

Fastline® body fillers and glazes are designed for a variety of applications that meet performance quality expectations at a desirable price.

For more information on FASTLINE® products, visit [PBE.Sherwin-Automotive.com](http://PBE.Sherwin-Automotive.com)

### FASTLINE™ Masking Tapes

FASTLINE™ Masking Tapes have been specifically developed to meet the needs of today's professional body shop. The Commercial Masking Tape provides excellent adhesive to a wide variety of substrates with medium crepe paper backing for conformability with sharp paint lines. The Performance Masking Tape also provides excellent adhesion to pre-painted substrates while maintaining a clean removal in either hot or cold condition. The fine crepe paper backing delivers great conformability with sharp paint lines.

MGD10805 – 5 gal – **\$79.95** was \$114.95

### Meguiar's® Hyper Wash

This wash is a biodegradable formula that safely and effectively lifts dirt and grime off all surfaces.

Hyper Wash

MGD11001 – 1 gal – **\$23.99** was \$32.36

MGD11005 – 5 gal – **\$114.95** was \$162.65

### Meguiar's® Shampoo Plus

Gently clean and condition even the most delicate clear coat surfaces without scratching. This shampoo deepens gloss, boosts shine, and leaves a highly reflective and slick surface.

Shampoo Plus

MGD11101 – 1 gal – **\$15.99** was \$21.33

MGD11105 – 5 gal – **\$65.95** was \$97.05

### Meguiar's® Silicone-Free Dressing

Provides an even, high-gloss shine that is ideal for any silicone sensitive environment.

Silicone-Free Dressing

MGD16101 – 1 gal – **\$29.99** was \$40.40

MGD16105 – 5 gal – **\$129.95** was \$190.45

### Meguiar's® Microfiber Wash Mitt

Meguiar's extra thick Microfiber Wash Mitt is the ultimate choice for show car perfect finishes. This wash mitt is clear coat safe and lifts dirt and grime for a swirl-free finish.

Microfiber Wash Mitt

MGX3002 – **\$4.99** was \$6.76

## HP Express Repair: Allowing shops to go Lean... One Bite at a Time

No one knows better than Lee V. Rush just how challenging it is to implement Lean Manufacturing in auto body shops. As Manager of Business Development for Sherwin-Williams Automotive Finishes, he prefers a more real world, shop floor “boots to the ground” approach when it comes to improving the operational process of a collision repair facility and coming up with a strategy to execute.

“After 15 years of ‘Lean,’ we continue to struggle with damage analysis/ blueprinting, parts correctness/mirror matching, in-process quality assurance, and the list goes on and on,” says Rush. The experts say ‘If you go Lean you must go all in!’ But, isn’t a little lean better than no lean?”

Rush believes it’s time for shops to take a different approach. That’s why he advocates “Sherwin-Williams® HP Express Repair Process (ERP),” a system that allows shops to become Lean “One Bite at a Time.”

ERP allows the “process” to manage both the urgency and the vehicle repair with little oversight, while allowing shops to become “Lean” in this revenue segment. The ERP workshop is designed to help collision facilities take advantage of cycle time absolutes and strategically formulate them into a sustainable program to drive cycle time improvements through CAT 1 vehicles.

ERP as a repair process provides a safe, clean, and complete repair of CAT 1 damaged vehicles within 0-2 days. “Today, most shops are accomplishing this, however it is not consistent, predictable, nor with little effort,” says Rush. “Our intent is to identify and define all the critical procedures and requirements to process a repair through the ERP in the most manageable and cost effective manner.”

By identifying the “absolutes” of the ERP, shops can begin to develop their strategic plans.

“First, we must identify the opportunities (CAT 1 repairs),” says Rush. “As we write estimates, schedule repair, and receive vehicles in our shop, we must identify the ERP vehicles. This is not hard to do with our simple definition of CAT 1s and a check-in process.”

### 3M® Perfect-It™ Compounding & Polishing Pads

3M® Perfect-It™ Foam Compounding & Polishing Pads are double-sided and specifically designed for unique applications. The 8” Foam Compounding Pad (3M05706) removes sand scratches and the 9” 100% Wool Compounding Pad (3M05753) is used to refine 1,200 grade sanding scratches or finer. The 8” Foam Polishing Pad (3M05707) polishing pad provides a nice, high-gloss shine. The 8” Ultra-Fine Foam Polishing Pad (3M05708) provides a swirl-free finish. All pads require the Quick-Connect Adaptor (3M05752) which makes it easy to change between compound and polishing pads.

8” Foam Compounding Pad

3M05706 – **\$25.99** was \$34.78

8” Foam Polishing Quick Connect Pad

### TECH TIP

Ask the Sherwin-Williams  
Automotive Finishes Expert

One of the most challenging jobs in any body shop is color matching—the number one major concern of customers when pulling into and out of a body repair shop. Sure, you can punch in factory paint codes to match the color—that will get you most of the way there—but we all know there are more critical steps that need to be followed by technicians who really know what they’re doing.

Variables such as manufacturing locations, metallic color applications, temperature, paint film thickness, flash off time between coats, fluid tip sizes, speed of the spray gun, surface type and humidity and drying time can all add changes to the color of the same paint.

Brian Stebbins, Manager of Sherwin-Williams Automotive Finishes’ Atlanta Regional Training Center, has been around long enough to know what trips up technicians when it comes to color matching. The most common mishaps include: automatically choosing the standard formula which can lead to unnecessary tinting and time wasted; waiting to verify the color of the vehicle in the spray booth because the vehicle is too far into the repair process to make the best decisions on color; using solvent cleaners on vehicles or spray-outs to obtain gloss; over pouring toners and moving to the next without recalculating; and over wetting the finesse coat of metallic and pearl formulas.

### Do's and Don'ts for the Sherwin-Williams Automotive Finishes Color Verification Process

“There’s a process for doing everything in this business,” says Stebbins. “Cutting corners is not going to work. And doing everything in a consistent fashion is key.” The process and consistent steps are brought to the forefront in a multitude of training classes available throughout the year from Sherwin-Williams Automotive Finishes. One of the most popular and important classes involves the Color Verification Process with AWP Performance Plus™.

This training is approved for I-CAR Gold Class points through the I-CAR Industry Training Alliance Program and qualifies each participant to apply for 4.75-CAR Gold Class points.

# Partnering up for Worker Safety

3M™ recommends a basic method for body shops to choose the right kind of safety equipment and respirators for its workers in a 5-Step process:

1. **IDENTIFY** the hazards (dusts, metal fumes, vapors, gases) and types of contaminants for which the respirator is being selected and exposure time.
2. **ASSESS** the risks (assess the hazardous levels against safety standards and consider other protection--skin, eye, body)
3. **SELECT** the right respirator and cartridge filter. 3M offers Respirator Selection Software and Respirator Selection Guide that assists with determining which respirator is suggested for a given exposure situation including data on 800+ chemicals, including gases, vapors and particulates.
4. **TRAIN** in fitting and use to optimize respiratory protection. Determine whether the respirator can be properly fitted to the wearer's face (for example, beards and other facial hair may prevent a good seal between the face and the sealing surface of the respirator).
5. **DEVELOP** cartridge/replacement plan: The cartridge and filter replacement plan implements a process that helps employees replace their cartridges and filters at the appropriate time. To help establish how frequently cartridges should be replaced, visit 3M™ Service Life Software.

## 3M™ Professional Series Half Facepiece Respirators

Breathe a little easier with the 3M™ Professional Series Half Facepiece Respirators. They're all about respirator comfort, durability, and stability in order to protect you from airborne contaminants in the workplace.

### 3M™ Body Tools

3M™ Body Tools are specifically designed for the best results. The Belt Sander Tool (3M28366) is ideally suited for use with 3M™ Abrasive Belts and Scotch-Brite™ Belts for a variety of metalworking applications. The Cut-Off Wheel Tool (3M20233) delivers fast, smooth performance with the power to cut through carbon steel, stainless steel, and other materials. The Sun Gun™ II Light Kit (3M16550) replicates natural sunlight helping to reduce the chance of costly re-work or comebacks related to color mismatch, lack of coverage, uneven metallic layout, and prepaint imperfections.
