

The Rosetta Stone

Languages: Egyptian and Greek,
Using three scripts -- Hieroglyphic, Demotic Egyptian, and Greek.
Found 1799 by the French in Egypt
Originally from 196 B.C.

The Rosetta Stone, British Museum, London

Examples of Hieroglyphics					grain
	king		boat, ship navigation		vine, fruit, garden
	eat, drink speak, think, feel		air, wind, sail		fire, heat, cook
	mummy, likeness, shape		in, from, as with (of instrument)		live, life
	move backwards		goddess, queen		calf
	snake, worm		enemy, death		envelop, embrace

Hieroglyphic, [from the Greek=priestly carving], type of writing used in ancient Egypt. Similar pictographic styles of Crete, Asia Minor, and Central America and Mexico are also called hieroglyphics. Interpretation of Egyptian hieroglyphics, begun by Thomas Young and J. F. Champollion and others, is virtually complete. The meanings of hieroglyphics often seem arbitrary and are seldom obvious. Egyptian hieroglyphics were already perfected in the first dynasty (3110-2884 B.C.), but they began to go out of use in the

Middle Kingdom and after 500 B.C. were virtually unused. There were basically 604 symbols that might be put to three types of uses (although few were used for all three purposes).

- 1) They could be used as ideograms, as when a sign resembling a snake meant "snake." [See chart above.]
- 2) They could be used as a phonogram (or a phonetic letter similar to our alphabet), as when the pictogram of an owl represented the sign or letter "m," because the word for owl had "m" as its principal consonant sound. [It would be like us using a picture of a snake for the letter "s."]
- 3) They could be used as a determinative, an unpronounced symbol placed after an ambiguous sign to indicate its classification (e.g., an eye to indicate that the preceding word has to do with looking or seeing). The phonograms provided a basis for the development of the alphabet.

Left - Demotic Egyptian detail

Demotic refers to both the ancient Egyptian script (derived from northern forms of hieratic used in the Delta) as well as the stage of the Egyptian language following Late Egyptian and preceding Coptic. (There is also a Demotic Greek, just to make things more confusing.) This language and script were well understood in the 19th century.

Α α ... Ω ω

Greek alphabet

Α α Alpha	Β β Beta
Γ γ Gamma	Δ δ Delta
Ε ε Epsilon	Ζ ζ Zeta
Η η Eta	Θ θ Theta
Ι ι Iota	Κ κ Kappa
Λ λ Lambda	Μ μ Mu
Ν ν Nu	Ξ ξ Xi
Ο ο Omicron	Π π Pi

Ptolemy's
name is
men-
tioned

Copyright 2000 by Joel A. Freeman, Ph.D.

Here are some of his translations.

A God	𐀀, 𐀁, 𐀂	Specimens		
A Goddess	𐀃, 𐀄	King	𐀅	One
Thoth, or Vulcan	𐀆, 𐀇	Son	𐀈	Two
Phoe, or the Sun	𐀉	Life	𐀊	Ten
Thoth, or Hermes	𐀋	Eternity	𐀌	9
Osiris	𐀍	Immortal	𐀎	7
Isis	𐀏	Day	𐀐	Applur
Americus, or Apollo	𐀑, 𐀒	Month	𐀓	of, or to
Stephanus, or Aphrodite	𐀔	Year	𐀕	When
		Temple	𐀖	And

He found the hieroglyphic symbols for Ptolemy's name, but couldn't figure out how to read it phonetically.

Ptolemy	𐀀𐀁𐀂𐀃𐀄
Berenice	𐀅𐀆𐀇𐀈𐀉
Amnephis or Amenem	𐀊𐀋𐀌𐀍
Mesphoras	𐀎𐀏𐀐
Pramnis, or Panseltes	𐀑𐀒𐀓𐀔
Soter	𐀕
Epiphaneus	𐀖𐀗
Eucbaristus	𐀘𐀙𐀚
Philometor, or possibly Philopater	𐀛

Here is a detail from the stone itself... Ptolemy's name is shown here twice.

Ptolemy's name, which appears in the Rosetta Stone's Greek text as *Ptolemaios*, was the first word recognized in hieroglyphics (see above). But early attempts to interpret its eight symbols were stymied by the traditional belief that all hieroglyphics could be translated as pictures of words. Even after Thomas Young assigned sound values to several symbols, Champollion held to the belief that the lion (one of the symbols in the word) symbolized the Greek word for war.

Champollion eventually worked on the idea that Ptolemy might be read phonetically. He reconstructed the name, sound by sound, from the Greek and Coptic into demotic, then into an earlier hieratic script and finally into hieroglyphics. The sound he arrived at was “p-t-o-l-m-y-s,” or “Ptolmis,” and could be spelled both right-to-left or in other directions. This discovery paved the way for deciphering the rest of the hieroglyphic text on the Rosetta Stone.

In 1822, a copy of the inscription from an obelisk at Philae, excavated seven years earlier, was made available to Champollion. He was stunned to see confirmed in its hieroglyphics a name he had reconstructed many times from a demotic papyrus: the cartouche of Cleopatra.

- Left - Autographed copy of the *Lettre a M. Dacier*, Paris, 1822

The young French scholar Jean-Francois Champollion (1790-1832) made a crucial step in understanding ancient Egyptian writing when he pieced together the alphabet of hieroglyphs that was used to write the names of non-Egyptian rulers. He announced his discovery, which had been based on analysis of the Rosetta Stone and other texts, in a paper at the *Academie des Inscriptions et Belles Lettres* at Paris on Friday, 27 September, 1822. The audience included his English rival Thomas Young (1773-1829), who was also trying to decipher Egyptian hieroglyphs. Champollion inscribed this copy of the published paper with alphabetic hieroglyphs meaning 'mon ami Dubois' ('to my friend Dubois'). Champollion made a second crucial breakthrough in 1824, realizing that the alphabetic signs were used not only for foreign names, but also for the Egyptian language and names. Together with his

knowledge of the Coptic language, which derived from ancient Egyptian, this allowed him to begin reading hieroglyphic inscriptions fully.

The picture to the left is Ptolemy's name extracted from Champollion's notes. On the far left, running vertically is PTOLMEES in our Latin alphabet. Next to that is the Greek. In the next column is the Demotic and in the last column are the Egyptian Hieroglyphics. As you can see, one letter in our alphabet may have several equivalent symbols in the Demotic script or the Hieroglyphics.

Hieroglyphics can be written in any number of directions, not just left to right or right to left.

The following hieroglyphic has been reversed to accommodate Left-to-Right reading.

The word 'Ptolemy' is written in hieroglyphs thus:

The letters in the above cartouche are:

P	O	L	E	E	S
T	M				

FIGURE 3. Count Rumford with Thomas Young and Humphry Davy lecturing at the Royal Institution, by James Gillray. Cartoon No. 520 in *The Works of Gillray from the Original Plates*, London: Printed for Henry G. Bohn, York Street, Covent Garden, by Charles Whitting, 1851. (Is it possible that the man writing, in the foreground, could be Coleridge?)

Forensic Tut Reconstruction

Nebkheperre **Tutankhamun** (alternate transcription **Tutankhamen**), named **Tutankhaten** early in his life, was Pharaoh of the Eighteenth dynasty of Egypt (ruled 1334 BC - 1325 BC), during the period of Egyptian history known as the New Kingdom.

The 1922 discovery by Howard Carter of his nearly intact tomb received worldwide press coverage and sparked a renewed public interest in Ancient Egypt, of which Tutankhamun remains the popular face.

In 2005, three teams of scientists (Egyptian, French and American), in partnership with the National Geographic Society, developed a new facial likeness of Tutankhamun. The Egyptian team worked from 1,700 three-dimensional CT scans of the pharaoh's skull. The French and American teams worked plastic molds created from these -- but the Americans were never told whom they were reconstructing. All three teams created silicon molds which are the most accurate replications of Tutankhamun's features since his royal artisans prepared the splendors of his tomb.
