

THE SPENCER'S GAMBIT

This easy-to-assemble paper chess set is part of the Spencer Museum's "Gaming the Winter" series of artful activities and games. "The Spencer's Gambit" features works of art from the Museum's collection as chess pieces.

BOARD SETUP

Chess is a board game for two players. It is played on a square board of 64 alternating or checkerboard squares. Each player starts with 16 pieces: 8 pawns, 2 rooks, 2 knights, 2 bishops, 1 queen, 1 king.

1. Assemble the two pieces of paper to form the board.
2. Assemble your individual pieces.
3. Each player, when facing the chessboard, should have a white square at the bottom right of the board.
4. In the second row of squares from where each player is sitting, assemble the row of eight pawns.
5. In the first row of squares nearest each player, place the two rooks in the corners, like castles protecting the most important pieces.
6. Place the two knights next to the rooks.
7. Place the two bishops next to the knights.
8. Place the queen on the square that matches its color.
9. Place the king in the remaining square.

HOW TO PLAY

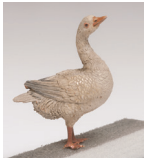

The object of the game is to capture your opponent's pieces, with the ultimate goal of placing their king in "checkmate," which ends the game. Checkmate occurs when a king cannot move in any direction to avoid capture.

1. Players take turns.
2. Pieces cannot move through other pieces (excluding a knight, which can jump over pieces).
3. Pieces cannot move onto a square that contains one of their own pieces.
4. The king is the most important piece, but also the weakest. The king can only move one square in any direction—up, down, sideways, or diagonally.
5. The queen is the most powerful piece. The queen can move in any one direction— forward, backward, sideways, or diagonally— as far as possible as long as it does not move through any of its own pieces.
6. The rook can move as far as it wants, but only forward, backward, and sideways.
7. The bishop can move as far as it wants, but only diagonally. Each bishop starts on one color (black or white) and always stays on that color.
8. Knights move two squares in one direction, followed by one square at a 90-degree angle forming the shape of an "L." They are the only piece that can move over other pieces, similar to a knight on horseback.
9. Pawns move and capture in different ways: they move forward but capture diagonally. Pawns can only move forward one square at a time, except for their very first move when they can move forward two squares. Pawns capture one square diagonally in front of them. They never move or capture backwards. If there is another piece directly in front of a pawn, it cannot move past or capture that piece.
