

Thermal Temperature Monitoring Solution

Complete Solution to Detect and Monitor Temperatures

Required Components (sold separately)

- DH-TPC-BF5421-T Thermal Hybrid Network Camera
- JQ-D70Z Blackbody
- DHI-NVR5216-16P-I 16-channel NVR with Face Recognition

Recommended Accessories (sold separately)

- VCT-999 Tripod (x2)
- RQW026-00 Bracket (x2)

Solution Features

- · Safe, Efficient, and Accurate Temperature Monitoring
- ±0.3° C Temperature Measurement (with blackbody)
- Contactless and Fast Multi-person Screening
- Enhanced Power and Data Transmission Distances (ePoE)
- Recommended for Use in Commercial Buildings, Healthcare Facilities, Airports, Metro Stations, and Public Gathering Locations

Solution Overview

The Dahua Thermal Temperature Monitoring Solution offers the latest hybrid thermal network camera that combines a Vanadium Oxide (VOX) sensor with a 2 MP visible-light sensor. The solution also provides a blackbody calibration device that maintains a customizable constant temperature as a reference point for the thermal camera. The thermal camera coupled with the blackbody calibration device and a feature-rich 4 TB Network Video Recorder delivers a contactless solution for continuous and non-invasive comparison of human skin temperature compared to the blackbody device. Thermal Temperature Monitoring technology enables quick detection of elevated skin temperatures compared to the customizable blackbody calibration device. Thermal imaging equipment can easily be installed and implemented to detect elevated skin temperature in environments such as airports, hospitals, clinics, office buildings, cruise ships, and any large public gathering location.

The Dahua Thermal Temperature Monitoring Solution is not a medical device and is not designed or intended for diagnosis, prevention, or treatment of any disease or condition. The solution is a screening tool that businesses and households can use to identify individuals with elevated skin temperature compared to a customizable reference temperature on or entering their premises.

Thermal Camera Functions

High Thermal Sensitivity

The VOx detector offers high thermal sensitivity (\leq 50 mK) that allows Dahua thermal cameras to distinguish objects in a scene with minimal temperature differences. The camera captures detailed images where thermal contrast between object and background is minimal.

Smart Alarm

The camera is equipped with a white-light illuminator and an external speaker that can be triggered when the camera detects an abnormal event (which relies on user-defined parameters) either via the thermal or the visible-light sensor. The camera also takes a snapshot of the scene and can record the snapshot.

NVR Functions

The Dahua DHI-NVR5216-16P-I combines Analytics+ algorithms with Dahua's ePoE technology into an all-in-one network video recorder. This NVR uses a powerful multi-core processor to provide 4K resolution processing for applications where impeccable image details are required. In addition, the NVR can be employed as edge storage, central storage, or backup storage with an intuitive shortcut operation menu for remote management and control. The Dahua Analytics+ algorithms significantly improve accuracy and reliability, as compared to standard intelligent features, to achieve precision human facial analysis. The NVR processes 24 facial images per second on up to four (4) channels of video stream face recognition and supports 20 face databases that can store up to 100,000 total face images. The Analytics+ facial recognition extracts facial metadata, including detecting a human wearing a mask. The system can identify and account for certain interference, including when a human wears a surgical-type face mask, and still provide a skin temperature measurement.

Real-time Face Recognition

Analytics+ performs real-time facial recognition on up to four (4) streaming video channels simultaneously. The server captures and analyzes facial features to determine gender, age, expression, glasses, moustache, and mask, and then can record the faces and store the associated structured data. The server also filters incoming video to display faces that match target features.

Please note that the use of facial recognition technology is restricted or prohibited in some jurisdictions. Users are responsible for ensuring that their usage of the solution complies with applicable law, and Dahua disclaims all liability with respect to any legally non-compliant usage of the solution.
