

Cummins

Maintenance and Operation

September 2018

Cummins Inc.

- Sales of \$20.4 billion in 2017
- Over 1,300,000 engines built in 2017
- 56,000 global employees
- Headquarters in Columbus, Indiana
- 100 year anniversary next year

CMI
LISTED
NYSE

Summary of diesel benefits

- **Premium driving experience with less fatigue**
 - Much lower noise levels, less downshifting in rolling terrain
 - 50% more torque, where you drive
 - Supplemental engine braking for downhill grades
 - Air suspension and air brakes for better ride and handling
- **Cost of ownership**
 - Up to 50% better fuel economy for lower operational cost
 - Longer warranty period
- **Convenience and Support**
 - Longer range for fuel stops
 - Less maintenance visits – annual vs. semi-annual
 - 3500 service locations – engine and generator with 40 RV focused coach care locations
 - 800-CUMMINS, Shows/Rallies, PowerClub

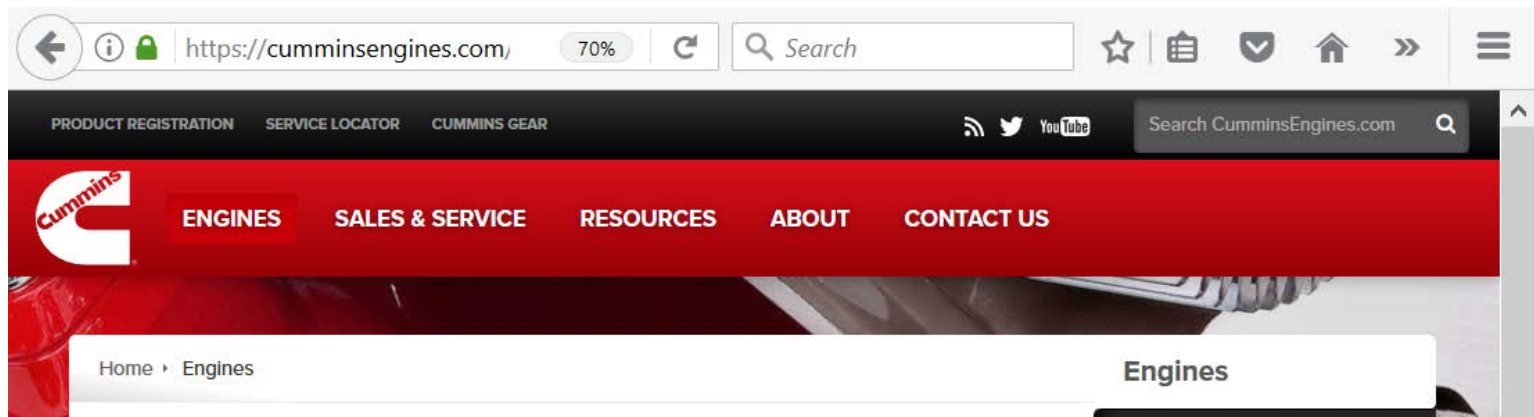

Agenda

- Product Information
 - Emissions history and technology
- Operation
 - Pre-Trip, Dash Lamps, Fuel Economy
- Maintenance
 - Fluids – Fuel, Coolant, Oil, DEF
 - Maintenance intervals
- Support
 - Cummins Care, Cummins Power Club

Handouts

- Presentation is available online
- www.cumminsengines.com
 - Search for FMCA

EPA Emissions – Clean Diesel

NOx / NOx+HC

Particulate

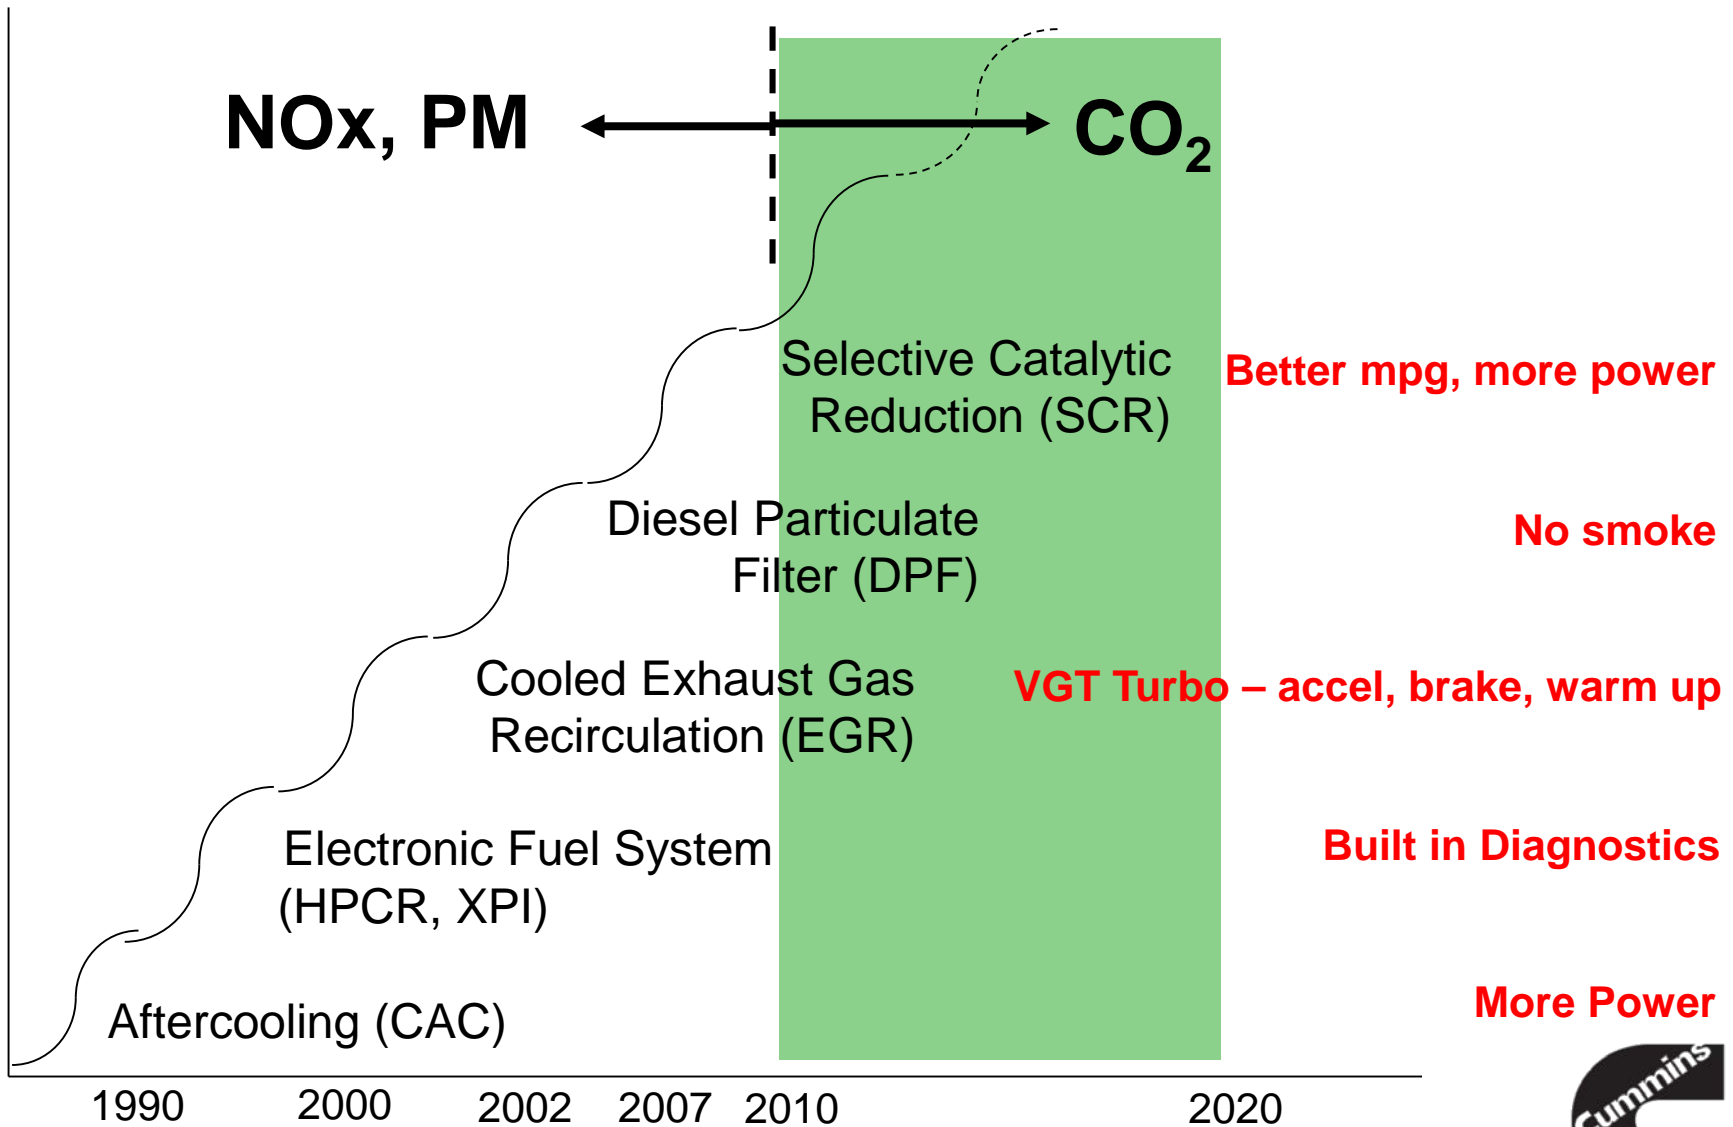

* Phase-In Average

Near Zero Emissions

Technology for Emissions Helps Customers

Cummins Owns its Technology

Filters and fluids

Electronic Controls

SCR catalyst and DPF

Combustion Technology

Variable Geometry Turbo (VGT)

Fuel Systems (XPI, HPCR)

Operation

Pre Trip Inspection

Before Starting

- **Check fluid levels – Oil, Coolant**
 - Level surface, wait 15 minutes for oil to drain to pan
 - Never remove radiator cap if coolant is hot (>120 degrees)
- **Air Intake**
 - Check Restriction indicator

After Starting – **walk around coach**

- **Check gage levels** (DEF, fuel, air pressure)
- **Water in Fuel lamp?**
- **Check for leaks under coach**
- **Look for smoke**
 - Should be no smoke from exhaust on 2007 and newer
- **Listen for air leaks or other unusual noises**

Operation – Dash Lamps

HEST (High Exhaust System Temperature) lamp
Elevated exhaust temperature. **Don't drive over leaf pile.**

DPF (Diesel Particulate Filter) lamp – soot is present in exhaust filter. **Increase system temperature by doing a highway drive for 30-40 minutes.**

Check Engine Lamp – check fluid levels, gages, sounds, and smells – **make a plan to get service.** Can be coupled with De-Rate

Stop Engine Lamp – **pull over as soon as it is safely possible.** This will require a visit to a Cummins service center.

Diesel Exhaust Fluid (DEF) lamp – indicates when DEF level in tank is low. **Correct with refilling DEF tank.**

Malfunction Indicator Lamp (MIL) – OBD and emissions control system related – **make a plan to get service.**

Do you speak engine?

- Cummins Guidanz – 2007 and newer
 - Read your check engine light from your smart phone
 - App is free

- Inline Mini adapter (part number 5299909)
 - Bluetooth datalink adapter
 - Plugs under dash near steering wheel
 - For you and your travel partners

- Process
 - If CEL comes on, plug in and read code
 - Call local Cummins service location
 - Click “share” to open email to send your ECM data

Fuel Economy

- What consumes horsepower?
 - **Aerodynamics (>50 mph)**
 - Air drag is a function of speed (10 mph = 1 mpg)
 - Customer control – **slow down**
 - **Rolling Resistance (<50 mph)**
 - Function of weight, road surface, and tires
 - Tires (0.3 mpg) and tire pressure (10 psi = 1%)
 - Customer control – **proper inflation and tire selection**
 - **Accessories**
 - cooling fan/alternator/freon compressor (40-60 hp)
 - Customer control - **clean radiator and keep dash a/c system charged**

Engine braking

- Two types of auxiliary brakes
 - Engine brake – restricts exhaust
 - Compression brake – releases compression
- Benefits
 - Longer service brake life
 - Better vehicle control – eliminates brake fade downhill
- More braking horsepower with higher engine rpm
- Transmission controls shifting
- Don't use when road conditions are slippery

Other operating tips

- **Warm-up** – operate with light throttle until coolant temperature reaches 150 degrees
- **Cooldown** – light load – idle for 3-5 minutes
- **Monthly engine exercise**
 - You are exercising the generator monthly, why not the engine?
 - Good – run engine at high idle (use the cruise set switch) until reaching operating temperature
 - Better – run engine at high idle and move coach forward and back
 - Best – go for a 20-30 minute drive at highway speed
- **Idle Speed** - Engine may automatically increase speed to warm up or reduce soot in DPF

Maintenance

Maintenance Intervals

	ISV5.0 (275hp)	ISB6.7 (200-360hp)	ISC8.3/ISL9 (330-450hp)	ISX15/X15 (550-600hp)
Coolant testing	6 months	6 months	6 months	6 months
Oil and oil filter*	12 months 10,000 miles	12 months 15,000 miles	12 months 20,000 miles	12 months 30,000 miles
Fuel filter*	12 months 10,000 miles	12 months 15,000 miles	12 months 20,000 miles	12 months 30,000 miles
Coolant Filter*	n/a	n/a	n/a (optional)	12 months 50,000 miles
Overhead* Adjustment	n/a	48 months 150,000 miles	48 months 150,000 miles	60 months 500,000 miles
Crankcase Breather Element	70,000 miles	Every 3rd or 4th oil change	Every 3rd or 4th oil change	125,000 miles
DEF filter	n/a	200,000 miles	300,000 miles	300,000 miles
DPF cleaning	150,000 miles	200,000 miles	200,000 miles	200,000 miles

*Whichever occurs first

Belts – 5 year inspection

Air System

- The most expensive mistake you can make
 - Only takes a teaspoon of dust to create major damage
 - Dirt can damage turbo, cylinder head, power cylinder
- Engine needs cool, clean, dry air
- Maintenance
 - Check restriction indicator when fueling
 - Check for loose or broken clamps
 - Follow chassis manufacturer recommendation
 - Generally change every 12-24 months

Fluids – Fuel

- Buy from high volume location (truck stop)
- Cummins does not require fuel additives
 - Two special cases where fuel additives are recommended:
 - Black “slime” in fuel filter
 - Biocide and fuel filters
 - Cold weather operation
 - Fuel can gel at temperatures below 15 degrees
 - Cummins Filtration™ Winter Conditioner Base
 - pint - CC2591, quart - CC2592
- Biodiesel
 - Suggest not storing long term with Biodiesel
 - EPA2002 and later – OK to B20; All OK up to B5

Fluids - Oil

■ API Classification

- Preferred: CJ-4 – Cummins CES 20081
 - Example – Valvoline Premium Blue
- Optional: CI-4 – Cummins CES20078 – more ash in DPF
- NEW OILS – **CK-4**, ~~FA-4~~ (don't use FA-4)

■ Synthetic Oils

- Do NOT extend oil drain intervals
- Can be used after first oil drain
- Main benefit – very low temperatures (-13 deg F)

■ Oil analysis

- Can be useful to detect contaminants
- Should not be used to extend drain intervals

Fluids – Coolant

- Decided by chassis manufacturer – MANY types
- Know what brand you have (don't just match colors)
- Top off only with the same brand
- Tell your service provider what coolant you want
- Generally drain and refill after 5 years

Long term storage (6 months) suggestions

- Better to change oil/filters before storage than after
- Fill fuel tank (prevent condensation)
- Do NOT store with Biodiesel
- A monthly exercise program is good
 - Operating temperature, lubricate parts, charge batteries
- Tighten DEF cap
- Check coolant freeze protection (northern states)

RV Maintenance and Operation ISL Electronic Diesel

Quick Reference Guide

Cooling

Routine Maintenance Recommendations

The ISL was designed to utilize supplemental coolant. The coolant level should be checked routinely. A good practice is to be observant of liquids that may have leaked on the ground while the motorhome is stopped.

Coolant level should be checked routinely. A good practice is to be observant of liquids that may have leaked on the ground while the motorhome is stopped.

Check coolant level routinely. Annually check coolant level. If coolant level is low, top up with coolant. If coolant level is low, top up with coolant. If coolant level is low, top up with coolant. If coolant level is low, top up with coolant.

Definition of Heavy-Duty Coolant

A combination of 50:50 water and low silicate antifreeze (ethylene glycol or propylene glycol) is suitable down to -34°F. Freeze protection decreases as the concentration of antifreeze increases. In addition to freeze protection, antifreeze is essential for overheat and corrosion protection.

Antifreeze must meet ASTM D4985 (GM6038M) specs.

Water Quality Requirements

Calcium/Magnesium Max: 170 ppm as CaCO₃
Chloride Max: 40 ppm as Cl⁻
Sulfur Max: 100 ppm as SO₄

A conservative approach to cooling system maintenance would include an analysis of your water supply. Your Cummins distributor can provide you with sample bottles and other information. Consider using pre-formulated antifreeze when on the road or when water quality is unknown. The use of distilled water is also acceptable.

Fully Formulated Coolant

Fully formulated coolant, such as Coolant, is recommended by Cummins and offers a vehicle owner the convenience of a pre-mixed antifreeze solution containing high quality water and antifreeze.

Ether

Ether MUST NOT be used for ISL engines. The ISL comes equipped from the factory with an integrated grid heater for cold starting.

Information

Cummins 1-800-DIESELS (1-800-345-7357)
Cummins Website: everytime.cummins.com

Consult Owners Manual or a Cummins Distributor for additional details.

Lubricating Oil

Routine Maintenance Recommendations

A good general practice is to check oil level as part of the daily pre-trip procedure.

Check oil level routinely. Annually check oil level. If oil level is low, top up with oil. If oil level is low, top up with oil. If oil level is low, top up with oil.

CAP Fuel System: 18,000 mile or 1 year, whichever comes first.

Lube Oil Specifications

The primary Cummins recommendation is to use SAE 15W-40 oil for normal operation at ambient temperatures above 5°F (-15°C). Consult the Owner's Manual or a Cummins Distributor for recommendations concerning colder operating temperatures.

ISL CM2150 Use high quality SAE 15W-40 heavy duty oil which meets or exceeds CES 20081.

Cummins Engineering Standard (CES) 20081 represents a low ash oil that will maximize the efficiency of the Cummins Particulate Filter (CPF) and extend the CPF service interval. A non-low ash oil meeting CES 20075 (CI-4/SK) can be used with no change to the oil change interval, but will reduce the service interval of the CPF.

High-Pressure Common Rail Fuel System (Pre ISL CM2150) Use high quality SAE 15W-40 heavy duty oil which meets or exceeds CES 20075 (API CI-4/SK).

CAP Fuel System Use high quality SAE 15W-40 heavy duty oil which meets or exceeds CH-4/CI-4 oil.

Synthetic Oils

Use of synthetic engine oil made with API group 3 or 4 base stocks is permitted subject to the same performance and viscosity limitations of petroleum (mineral) based engine oils. The same oil change intervals as petroleum based engine oil must be applied.

Supplemental Oil Additives

Cummins does not recommend the use of aftermarket oil additives. Current high quality engine oils are very sophisticated, with precise amounts of additives blended into the lubricating oil to meet stringent requirements. Aftermarket oil additives are not necessary to enhance engine oil performance and in some cases can reduce the engine oil's capability to protect the engine.

Oil Analysis

Oil analysis, as a method to extend drain intervals, is NOT recommended. Different methods of measuring soot, lack of correlation among testing labs, and differing driving patterns and idle time are the basis of right recommendation.

Regeneration Lamp Sequence

Operation: What is Regeneration?

- Soot accumulates in the DPF
- Without regeneration, DPF can plug
- We oxidize the soot by regeneration
 - Passive – any time exhaust system is hot
 - Active – extra fuel creates extra heat
- All that is left is ash (minerals)

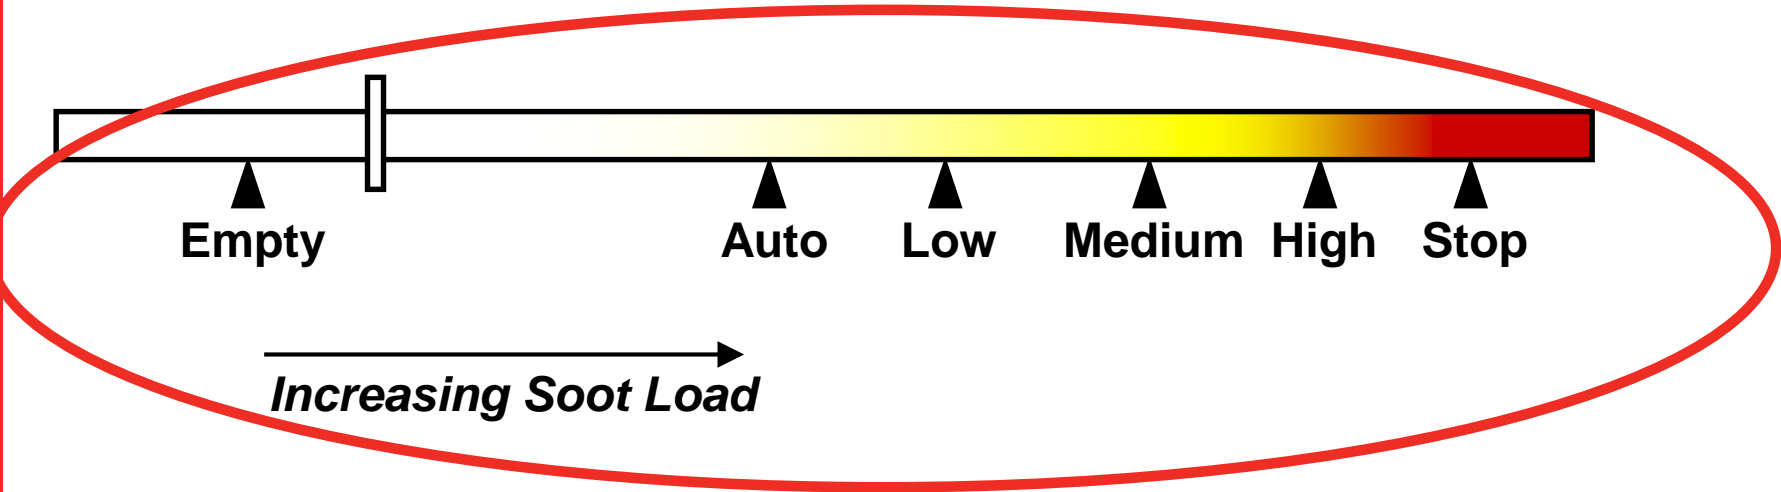

**Similar to how your
self cleaning oven works**

Wall-flow

No lamps on
System is filtering exhaust
Soot is collecting in the DPF
Enjoy the ride

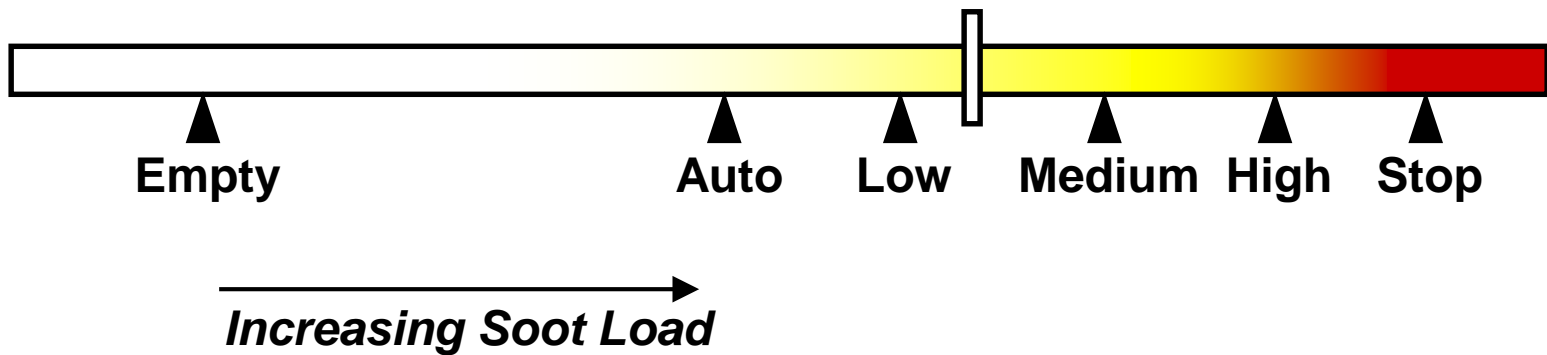

No lamps on
Passive regen is occurring
System may actively regenerate
Might hear different noise from turbo
Enjoy the ride

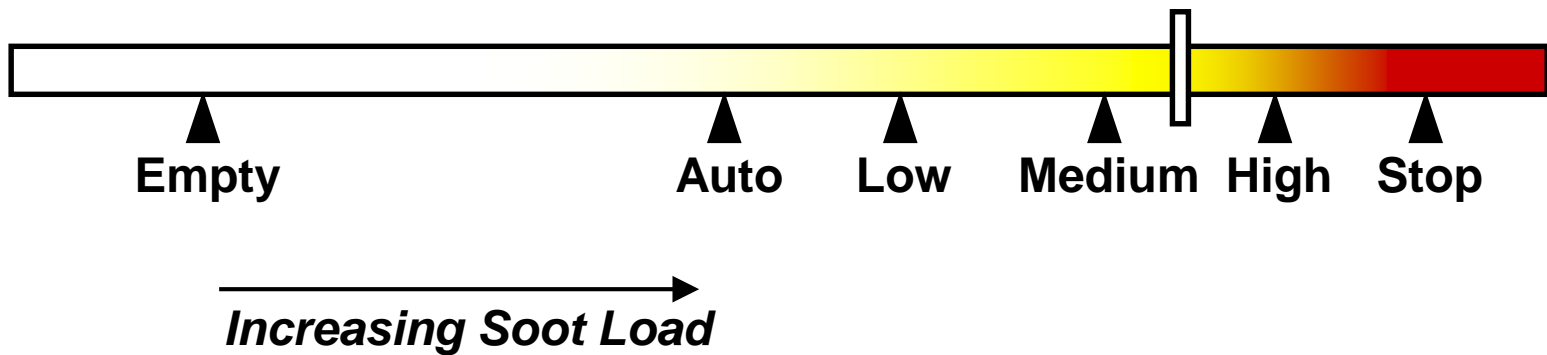

Exhaust temperatures are high
Don't drive over a dry leaf pile

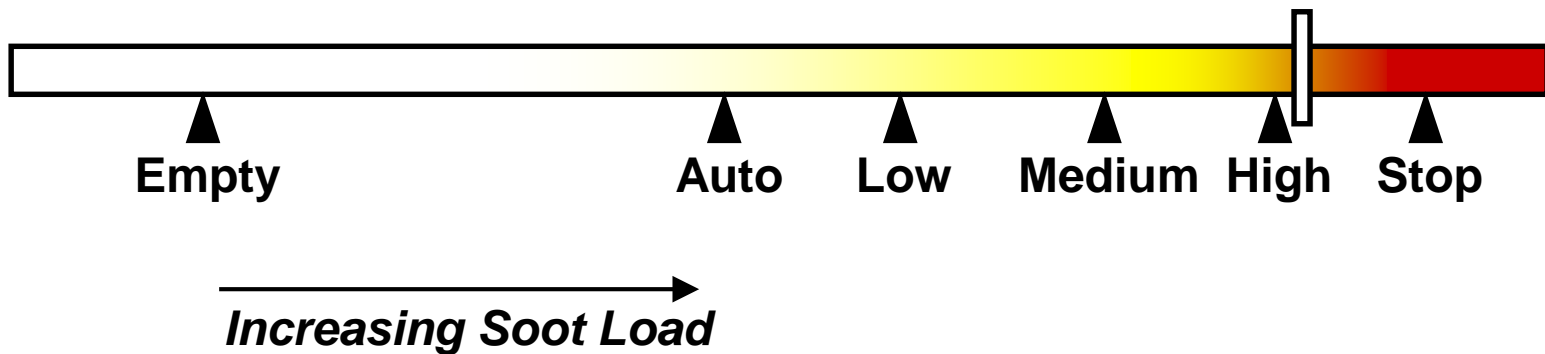

DPF lamp on solid
Low level of soot in DPF
Go for a highway speed drive

DPF lamp flashing
Medium level of soot in DPF
Go for a highway speed drive

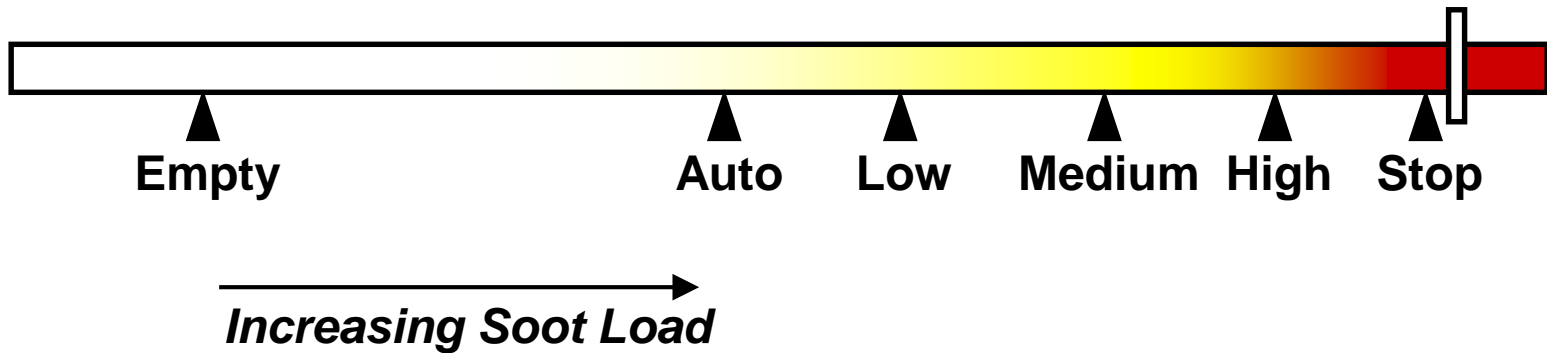

DPF lamp flashing – Check Engine Light on High level of soot in DPF

Go for a highway speed drive

Or make plans to visit Cummins shop

**DPF lamp flashing – STOP Engine Light on
Stop operation as soon as it is safely possible
Will require a visit to Cummins shop**

2010 - SCR

- **SCR** – Selective Catalytic Reduction
- DEF (urea) is injected to make ammonia
- Ammonia + NO_x react to form nitrogen and water
- Allows better engine tuning – mpg, power, maintenance

Fluids - DEF

- Freezes at 11°F (does not degrade)
- ISO spec 22241-1 – 32% Urea, 68% deionized water
- Shelf life 1 – 2 years depending on temperature
 - Avoid direct sunlight and temperature above 78°F
- Non-toxic, non-polluting, non-flammable
- 2-6 gallons DEF for 100 gallons of diesel
 - Most motorhome DEF tanks are 10-15 gallons
 - Sized for about 2-3 complete fuel tank fill ups

DEF Lamp Sequence

- Just like your car
 - There is a DEF level gage
 - Lamp comes on if you don't pay attention to gage
- Lamp sequence

1. Solid

2. Blinking

**3. Blinking
and CEL**

**4. Blinking and
Stop Engine**

- If you ignore the lamps, there are consequences
 - Torque derate
 - Eventually limited to 5 mph – “inducement”
 - If you run out, don't idle >1 hour, don't fill fuel without DEF, don't key off

Customer Support

Types of Cummins service locations

- Cummins Coach Care locations (40)
 - RV friendly repair locations
 - Meet certain criteria (tools, facilities, amenities)
 - **Top of the line locations**
- Cummins Distributor locations (220)
 - Names start with Cummins (e.g. Cummins Sales & Service, etc)
 - Parts and service for both engines and generators
 - **Specialists**
- Cummins Dealer locations (3500)
 - Have a Cummins sign
 - Typically dealers of a truck OEM (Navistar, Freightliner, etc)
 - Parts and service for chassis and engine
 - **General Practitioners**

Cummins Care

- Customer assistance program

- 1-800-CUMMINS™
 - Assistance in finding Service Location
 - Engines, generators, parts, service – “One Cummins”

- Cummins Care representative
 - Will ask for information (Engine s/n and location)
 - Can help locate closest authorized repair location
 - Can assist you with scheduling the unit into the repair location
 - Can answer questions you might have

Cummins Power Club

- Receive newsletters
- Website access with reference information
 - Online literature
 - Access to QuickServe Online
- Engines and Generators
 - Parts and Service Support
 - Cummins distributor discount – 10%
- Annual Fee
- www.cumminspowerclub.com

Diagnostics

Tools – retrieving fault codes

- Read faults without a lamp
 - Many have SPN/FMI on dash now
 - Pedal Dance: Key On, Throttle Pedal 3x to floor
- New: Cummins Guidanz and Inline Mini
 - App is free; Inline Mini part number 5299909
 - Works on 2007 and newer
 - Also reads public J1939 codes

Service Information

- Cummins QuickServe Online
 - Quickservice.cummins.com
 - Free for up to 5 ESNs (limited owners plan)
 - Fleet version may be best for a non-Cummins sales dealer

The screenshot displays the Cummins QuickServe Online web application. The main content area is titled "Service Information (ISX15 CM2350 X101)". Below the title, there is a navigation menu with options like "Manuals", "Campaigns", "TRPs", "ATCs", "Service Bulletins", "TSBs", "What's New", and "Service Tools". A sub-menu is open for "Engine Fault Code Analyzer", showing options for "Engine Fault Code Search" and "SPN/FMI To Fault Codes". The main section contains a form for entering active fault codes, with a table that has columns for "FAULT CODE" and "DESCRIPTION". The table is currently empty, with "Remove" links next to numbers 1 through 5. Below the table are buttons for "Add More Fault Codes" and "Analyze".

- QuickServe Mobile – for your handheld device

Diagnostic Steps

1. Read fault code
2. Quickserve.cummins.com
3. Enter ESN (filters information to that ESN)
4. Service Tab
 - Manuals: Fault Code Troubleshooting Manual
 - Fault Code Search: Fault Code Analyzer
 - (can use SPN/FMI to Fault Code convertor)
5. Click on Fault Code
 - Shop talk is helpful
 - Has wiring diagram and info about fault
