

Tigernuts and Carp Fishing

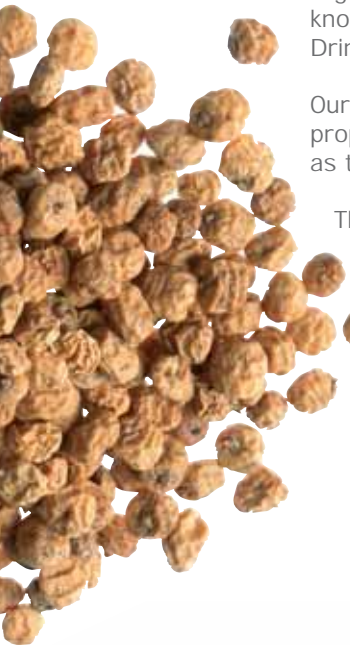

TIGERNUTS TRADERS, S.L is the world leader in Tigernuts and its derivatives

The Tigernut is a tuber that has been traditionally cultivated in the region around Valencia (Spain). Until recently, Tigernuts were only known for being the main ingredient for the famous Horchata Drink (Tigernut milk).

Our company has been the pioneer in the investigation of Tigernut properties, developing various applications in different fields such as the food industry and the cosmetics industry.

These years of investment, investigation, innovation and development by TIGERNUT TRADERS has had only one target in mind: To Guarantee the best quality and variety of products related to this exotic tuber, to assure that our customers have the best product and stock all the year round, being able to satisfy all their needs whenever our customers require them.

Why carp worldwide love our product!

Its high content in natural sugars makes it a “naturally irresistible” product for carp, being considered a selective bait all over the world. Even in lakes and rivers with a high crayfish concentration.

The Tigernut

The Tigernut (*Cyperus Esculentus*) is a tuber that has been used for centuries in an important part of Africa.

Ancient Egyptians, one of the most important civilizations in the past, used this product for its magnificent regenerative and healing properties. A proof of this value was that Tigernut's have been found in sarcophagus and burial chambers, were Egyptians have been buried with their most valuable belongings.

The most important product of our catalogue is winning awards day by day because of its efficacy and effectiveness.

Tigernuts are a recommended product for being used all season, but its efficiency increases as the climate becomes warmer.

Packaging
25 Kgs. bags

Qualities:

Black
(10-25mm.)

XXL
(10-25mm.)

Large
(12-15mm.)

Skinned
(12-15mm.)

Standard
(8-11mm.)

Micro
(6-7mm.)

Tigernuts Flour

This amazing natural product, after many years of investigation and investment, due to the fact that, grinding such a product with such a high content of natural fats, is not easy, without affecting its properties. So much so that it has become a very popular product for those fishermen that are looking for a smooth and creamy texture in their creations, taking complete advantage of the Tigernut characteristic aroma, that drive carp crazy.

Tigernuts Flour can be used perfectly as a base ingredient for different mixes, thanks to its high fat content it permits keeping other products moist, making them seem fresh even after a long period of time.

Tigernuts Flour is probably the most efficient and effective way to introduce into places where the grain itself is not very well known, as it's easier to consume by carp and could be mixed with different ingredients enhancing its attracting power.

Packaging
15 Kgs. boxes

Tigernuts Oil

All the Tigernut quality concentrated into an oil.
Its strong and intense flavour, being nut oil, enhances its attracting power.

Highly recommended for boilies and the preparation of; this oil has almost the same properties as the Tigernut Extract can offer, but in a more intense form. The Tigernut oil is not hydro soluble so it concentrates all its attracting power in the boilie.

Mix recommended dose 15-30 ml./Kg.

Packaging
250 ml & 1.000 ml plastic bottles
Exists the possibility of acquiring this product in drums (contact us)

Tigernuts Extract (Tigernuts Milk)

Tigernut milk is probably the most typical and traditional drink in around Valencia, and also one of the best baits available for Carp Fishing.

Tigernuts Extract makes an extremely sweet milk containing over a 22% of natural sugars and 30% of fats, allowing the use of this product in many different ways for Carp Fishing purposes.

It can be used directly on the lake as an initial attraction, creating a white cloud that once diluted into the water, the carp however far away they are from your fishing spot, they will come.

It's a perfect product for getting carp to your spot, and directly to your hook.

Perfect for using with PVA bags, as the extract does not dilute this kind of bag, it will only dilute with water contact, where the product will hit with all of its effectiveness.

Highly recommended for the preparation of boilies due to its sticky texture we can reduce the use of eggs in the mixes, and we will get the recommended consistency for the boilie with a high sugar concentration.

Packaging
500 ml & 1.000 ml. glass
bottles

Other Particles:

Hemp

Hemp is a little black seed approximately 5 mm length. It requires a previous preparation and there are several ways to do it, depending on the angler's choice

Giant Maize

Just like we previously explained, it is very important to cook the grains properly before using them as bait, because a non correctly cooked grain or a raw one could be especially harmful to the carps. Maize is one of the products which requires the most rigorous preparation, but then it becomes probably one of the most effective baits. This kind of maize is not a genetically modified product, but comes from the Andin region of Peru and its size can be from 18mm up to 24mm.

Beans

A grain specially recommended for fishing due to its large size and to its fantastic properties, very appreciated by the carp. Its size can be from 21 mm up to 26 mm

Chickpeas

Just like the maize, chickpea's are one of the grains (not nuts) most appreciated by anglers. It is a perfect bait with which we can start fishing from the ground up, but we have to be carefully with it because it is a grain that attracts some other fish like tench. Its size is about 10 mm.

Peanuts

Peanuts are a legume that are very much valued for human consumption. Its size can be from 18 mm up to 20 mm, and it is a product prone to decay if it is not of the best quality, so it is very important to get a product with human consumption quality, like the one's offered by our company, in order to avoid it to become indigestible for carps.

Lupin

Lupins were very known in the ancient World, and we are now talking about a very useful grain these days, depending on the situation. It is perfect to bait lakes and very valid to use as hook bait. After being soaked for some time its natural sour flavour disappears.

Mapple Peas

Just like the maize or chickpeas, maple peas make an instant bait. One of the most usual mistakes is to use too many grains for fishing, which limites the catches. Probably this is the reason why the maple peas have been forgotten by anglers, but even like this, they are still an excellent grain. It's size is about 7mm diameter.

Prepared products ready-to-use

Particles are probably one of the most effective baits used for Carp Fishing. Also these are the products with the least environmental impact on our fishing waters.

At Tigernuts Traders, S.L we have developed some prepared products with our special recipes that preserve every single property of the raw material, but ready-to-use. These products have been developed for those anglers who don't have time, or space, enough to cook their own particles or for those anglers which are in a hurry and need fishing NOW!. In these prepared products we offer our combined knowledge, looking after the carp's health and the anglers benefit.

You just have to add to the product, if you want to increase its power, some other products or colouring agents to get the perfect bait... Let's go fishing!

Packaging 400 grs. glass bottles

Possibility of acquiring this product in plastic bags (contact us)

Through our exclusive particle cooking system we preserve all product qualities without losing any of its effectiveness, with the advantage of preserving them for longer periods, instead of those particles prepared at your own home.

We can offer the following prepared particles:

- Tigernuts
- Maize
- Lupin
- Hemp
- Chickpeas
- Beans

Do it yourself

The main part of particles and grains used for Carp Fishing require a previous preparation, specially Tigernuts, to reach its optimal point of use

For Tigernut preparation we must follow these steps:

(1) We must soak the Tigernuts in water to recuperate its natural moisture level, softening a little their hard skin. We have to cover the Tigernut with enough water because they absorb a large amount of water.

(2) Recommended soaking time is 36 hours.

36:00_{h.}

(3) Next, we add some more water into the receptacle and then we pour it all into a pot to start the boiling process, which depends on the type of receptacle. It is usual to add some sugar during the cooking process to boost the Tigernut flavour and to get a quicker fermentation.

(4) Recommended cooking time in a pressure cooker is 45 minutes.

(5) Once boiled, let the Tigernuts cool down in the water where they have been cooked, because it contains a high level of glucose which comes from the Tigernuts during the cooking, this is the best stock to help the fermentation process. We introduce them into a hermetic container where we will leave them to settle between 3 and 5 days.

(6) During these days, the liquid will convert into a viscous gel which is delicious for the carp

Tigernuts... A nut for the Crafty Carper!

Warning:

Raw particles should not be used without a proper previous preparation. Non cooked particles can be very harmful for carp as they can not digest them properly.

We know exactly how carps are driven crazy
