

# Tizen SDK Annual Report – Key Improvements

Changseok Oh (Samsung),  
Yeongkyoon Lee (S-Core)

The image features a white background with a large, faint blue circle on the right side. On the left, there are several blue and white striped ribbons that appear to be falling or cascading downwards. Interspersed among these ribbons and continuing down the page are numerous small, colorful dots in shades of blue, green, and dark blue. The overall aesthetic is clean and modern.

# Introduction

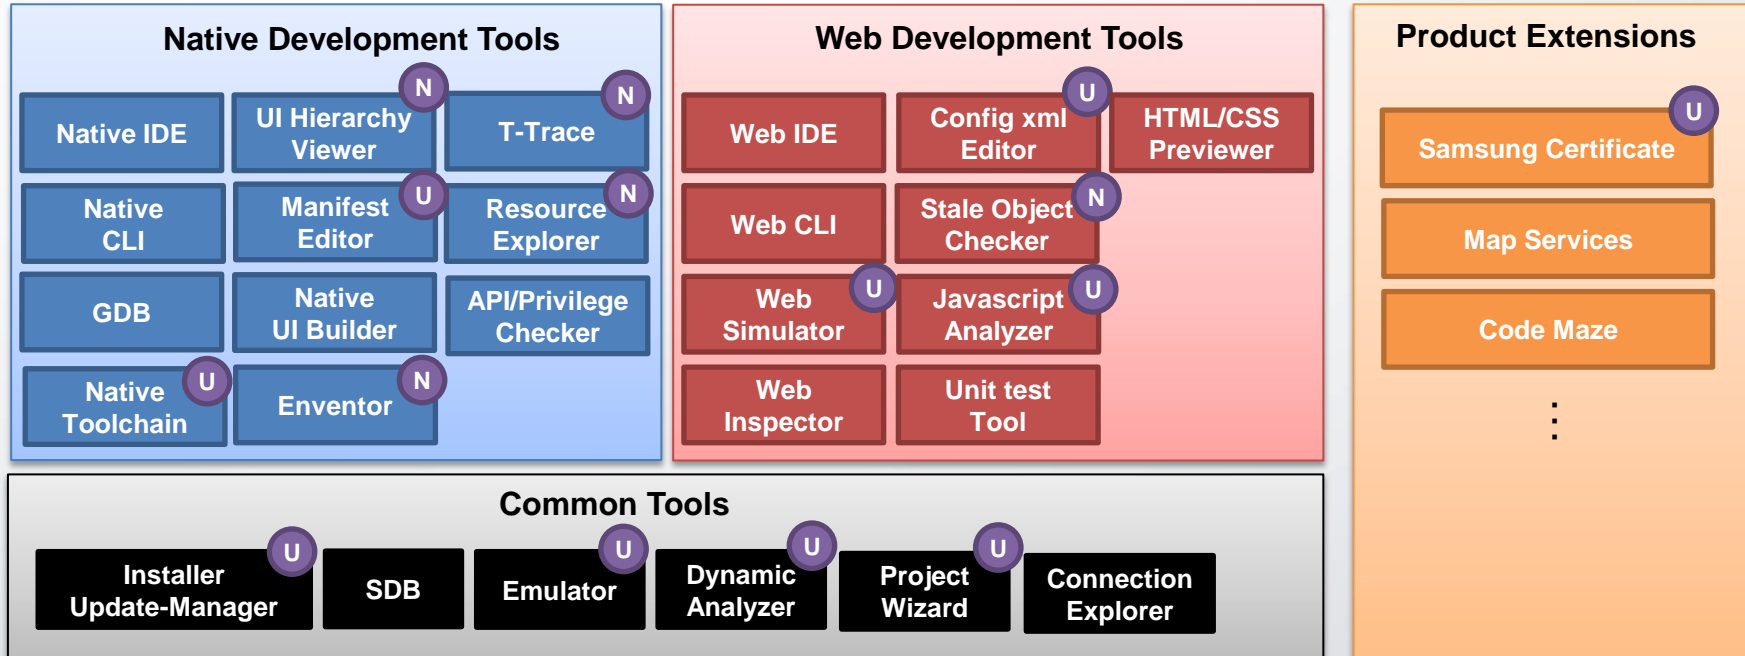

# Tizen SDK Release History

# Tizen SDK Architectural Overview

- Tools of Tizen SDK have updated and extended to increase developer's efficiency and usability

**N** New components      **U** Updated Components

# Updated Features

---

- **Common Features**

- Multiple Platform Version Support
- SDK Install / Update
- Install add-on SDK
- Setup Developer Certificate (Only [Samsung Devices](#) for Security Purpose)
- Online Documents

- **Application Development Features**

- Application Model & Programming
- Run, Debug and Profile

A decorative graphic on the left side of the slide. It features several pieces of blue and white striped paper, some of which are curled or folded. Scattered around and below the paper are numerous small, colorful dots in shades of blue, green, and dark blue. The background of the slide is a light gray with a subtle, wavy pattern.

# Updated Features – Common

# One SDK supporting Multiple Platform Version

- SDK tools and Platforms were tightly coupled
  - App Developers should use the proper SDK supporting required platform version

**AS-IS**  
<Tizen 2.4>

- An Integrated SDK will support multiple platform version (Planned within 2015).
  - App Developers can select the platform version by their attention.

**TO-BE**  
<Next SDK>

# Installer & Update Manager Newly Updated (1/2)

## Install Manager of Tizen 2.3

- Heavy SDK Image Size (≒ 2.5 GB)
  - Tools and Platforms are in one image
- Uninstall all of packages only
- Not easy to check packages to be updated

**AS-IS**  
<Tizen 2.3>

## Installer & Update Manager of Tizen 2.4

- Reduces Initial Install Size ( ≤ 400MB)
  - Tools and Platform are separated.
- Can uninstall selected packages
- Easy to check packages to be updated from download server

**TO-BE**  
<Tizen 2.4>

# Installer & Update Manager Newly Updated (1/2)

- **Separate The Installation Step into 2 parts**
  - Initial Installation – Common IDE, CLI and Can develop web application
  - Update Manager After Installation
    - Can install Platform Binaries, Emulator and Simulator by selecting versions and profiles
    - Can develop Native Application

**AS-IS**  
<Tizen 2.3>

**TO-BE**  
<Tizen 2.4>

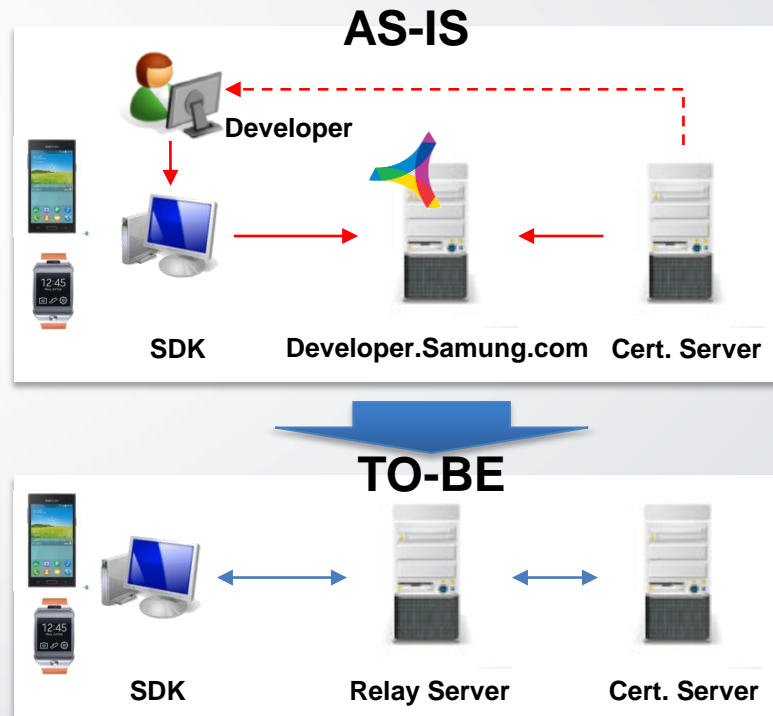

# Improved Developer's Certification

## • Certification Process for *Samsung Devices*

- Request in Web site & Receive by e-mail
- Register process is *NOT* simple
- Make developer's VOC on registering in SDK

## • Improvement on Issuing process

- Register immediately with add-on SDK
- Opening service at the end of 2015

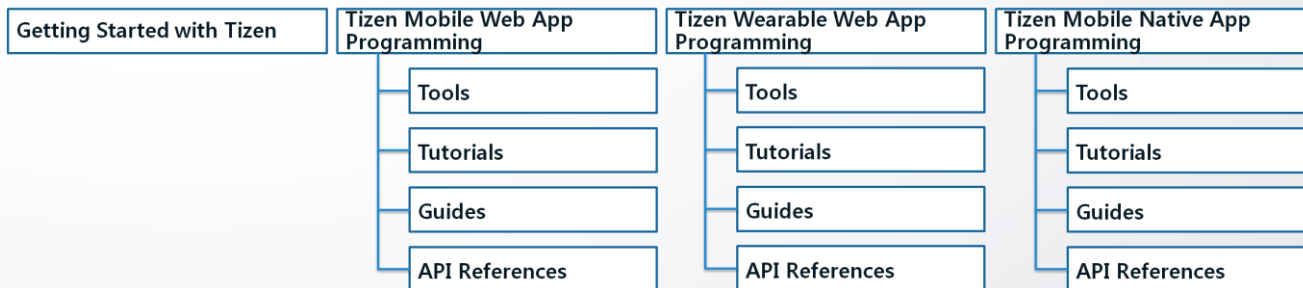

# Documentation – Dev Guides

- **Restructured & Go to online**

- Dev Guides are restructured for reducing duplication and maintenance
- Developers can navigate Dev guides easily through [developer.tizen.org](http://developer.tizen.org)

**AS-IS**  
<Tizen 2.3>

**TO-BE**  
<Tizen 2.4>

# Updated Features

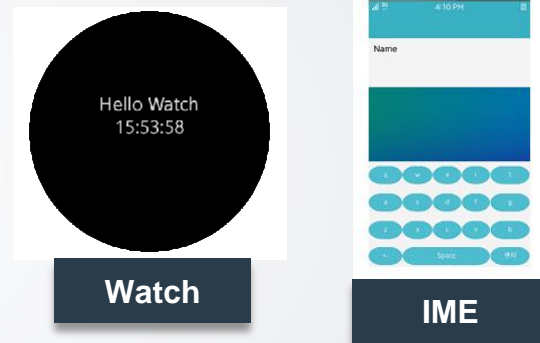

## – Application Model & Programming

# Enhanced Programming Model for Native Application (1/3)

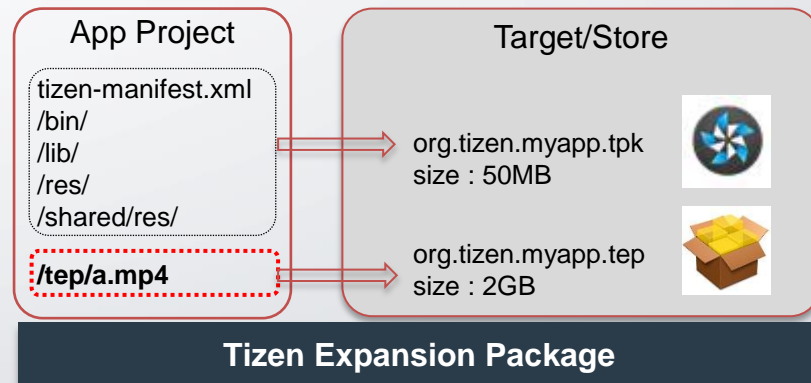

- **New application models for more real world**

- Watch (for wearable only)
- IME
- Widget (on home screen)

- **TEP for rapid test and update**

- A new separate package to contain large files
- No repeated installation of unchanged files
- TEP: Tizen Expansion Package
- TPK: Tizen Package

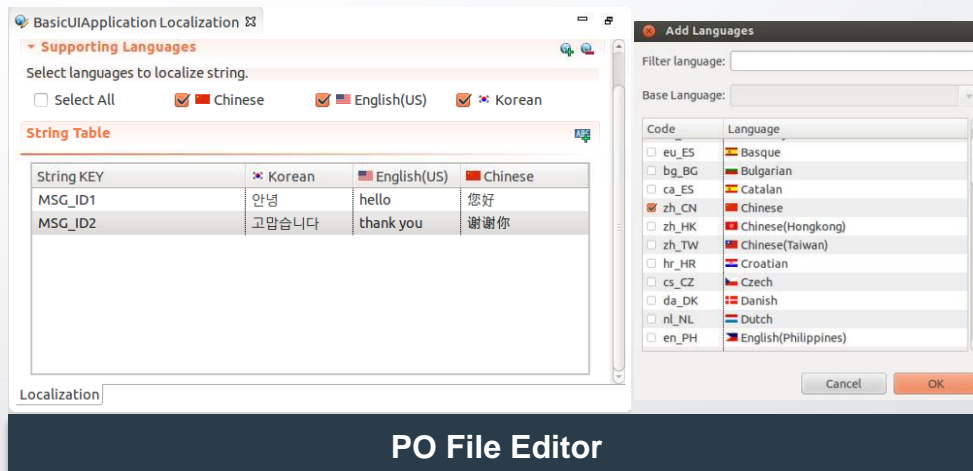

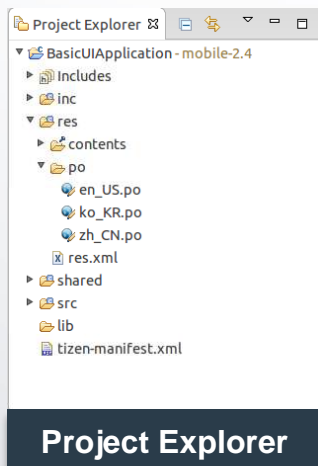

# Enhanced Programming Model for Native Application (2/3)

## ✓ How to support multi-devices?

### • PO File Editor to write multilingual programs

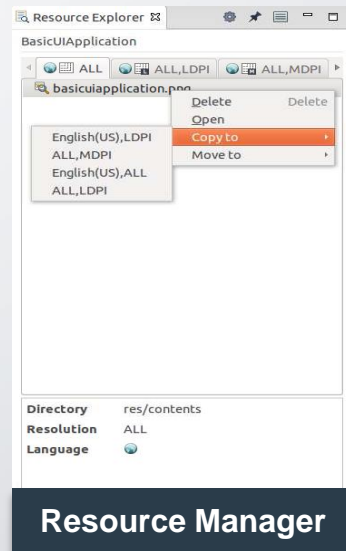

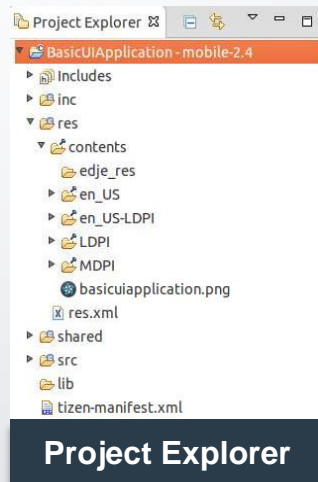

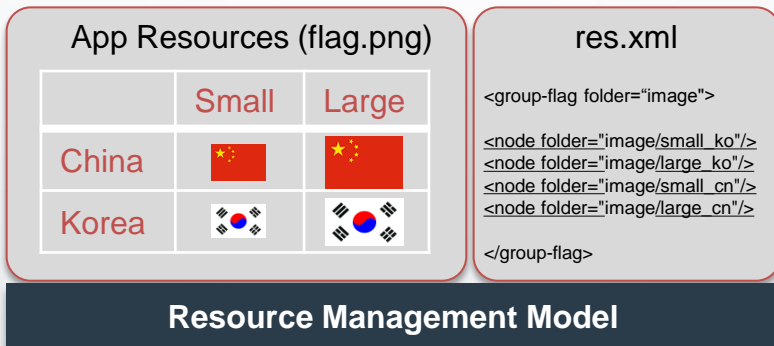

- Easily edits multilingual messages applied to .po files for GNU gettext

# Enhanced Programming Model for Native Application (3/3)

- **Efficient Resource Management**

- Supports multiple devices without re-packaging
  - Resources under res/contents according to locale and screen density
  - All-in-one packaging with res.xml
- Resource Manager (planned in 2.4)
  - Shows all resource configurations
  - Easily edits the resources in drag/drop way

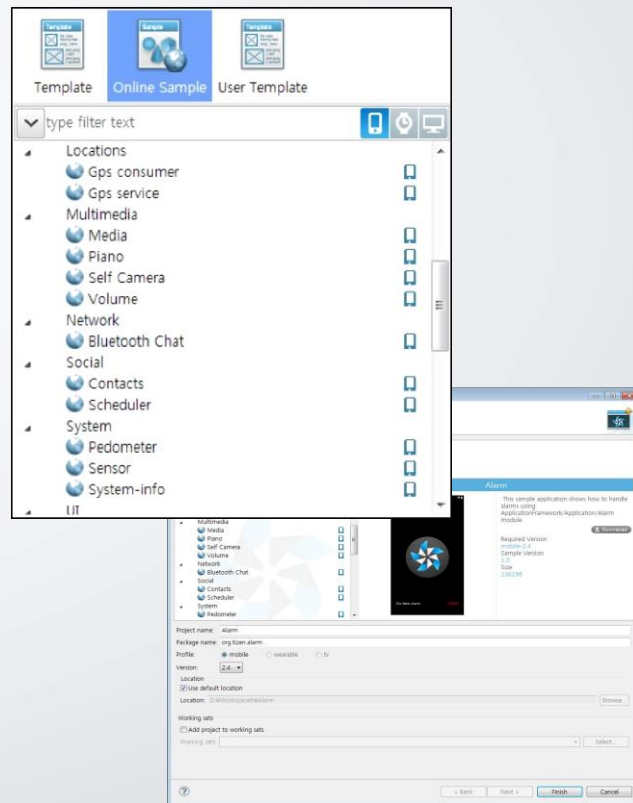

# Online Sample

## ✓ Problems in offline sample

- Lazy update depending on SDK release
- Unclear classification of sample types
- No search or filter

## • Online sample

- Up-to-date samples available without SDK update
- Useful search and profile filter
- Plenty of well-categorized samples
  - Web: Application, Communication, Contents, General, Graphics, Hybrid, Multimedia, Sensor, Social, Storage, System, UI
  - Native: AppFW, Base, Graphics, Locations, Multimedia, Network, Social, System, UI

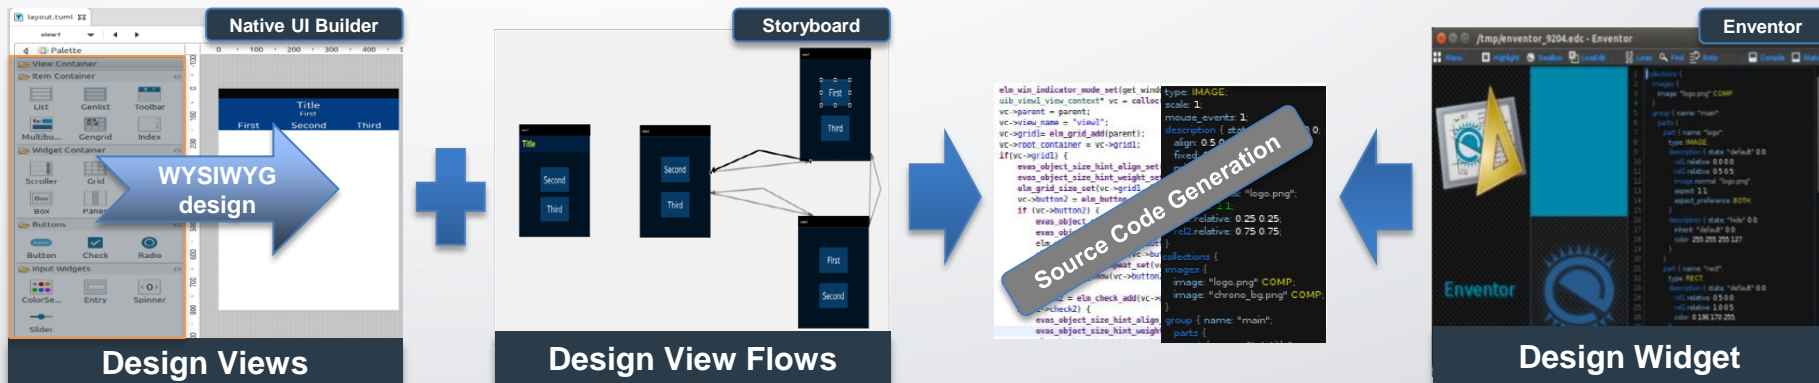

# Easy UI Programming for Native Application (1/2)

## ✓ UI authoring tool vs. text editor?

### • UI Builder: Easy and fast way to develop UI application

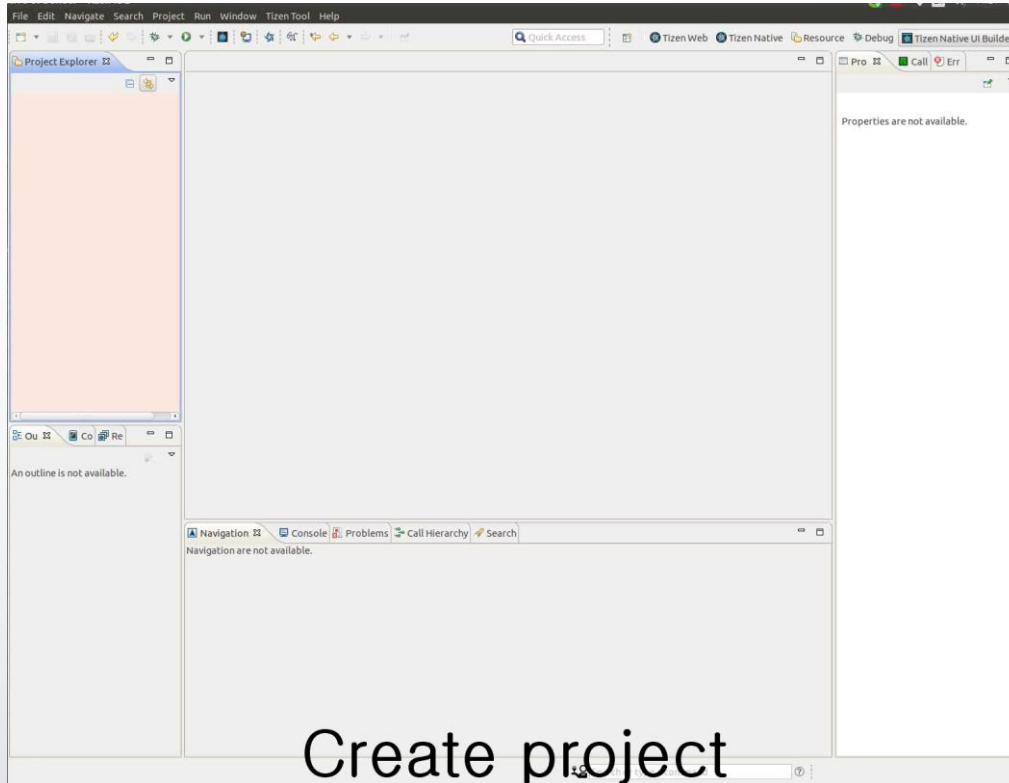

- Designs views by drag and dropping in WYSIWYG editor
- Easily binds logic programming by code generation of event handler stubs
- Storyboard to design view and event flows in visual way

### • Inventor to design UI widget

# Easy UI Programming for Native Application (2/2)

- A short clip of UI Builder (application making in 2m30s )

# JavaScript Analyzer (JSA) for Web Application

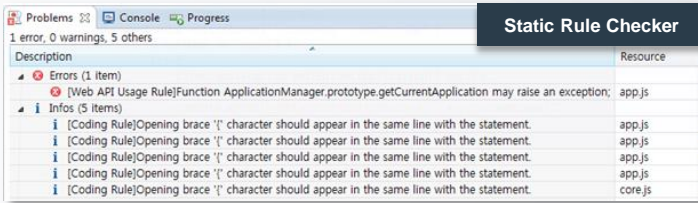

## ✓ How to write more stable web application?

### • Rule Checker of static analysis

- Detects potential errors
  - Web API misuse
  - API version compatibility & missing API privilege
- Checks compliance to coding guides

### • Stale Object Checker of dynamic analysis

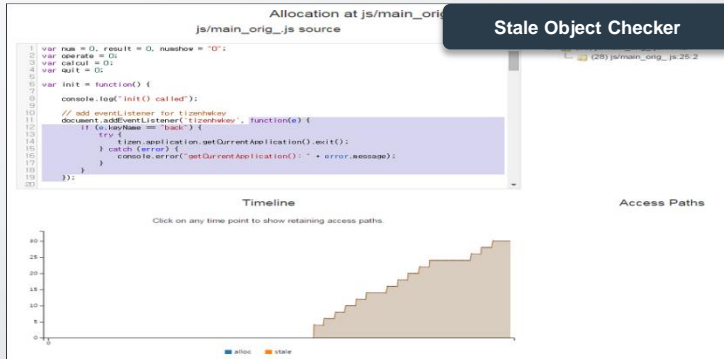

- Dynamically detects possible memory leaks
- Finds the problematic JavaScript objects
- Locates the site creating problematic objects

The screenshot shows the 'Static Rule Checker' window with a table of violations. The table has two columns: 'Description' and 'Resource'. There is one error and five info items.

Description	Resource
[Web API Usage Rule]Function ApplicationManager.prototype.getCurrentApplication may raise an exception;	app.js
[Coding Rule]Opening brace '{' character should appear in the same line with the statement.	app.js
[Coding Rule]Opening brace '{' character should appear in the same line with the statement.	app.js
[Coding Rule]Opening brace '{' character should appear in the same line with the statement.	app.js
[Coding Rule]Opening brace '{' character should appear in the same line with the statement.	app.js
[Coding Rule]Opening brace '{' character should appear in the same line with the statement.	core.js

**Coding Rule Violations**

The screenshot shows the 'Stale Object Checker' window. It displays a code snippet with a highlighted section. Below the code is a 'Timeline' graph showing memory allocation over time. The graph has a y-axis from 0 to 80 and an x-axis from 0 to 20. A blue bar labeled 'alloc' and an orange bar labeled 'state' are shown at the bottom. The graph shows a series of steps increasing in height, representing memory allocation. To the right of the graph is an 'Access Paths' section.

**Staleness Monitoring**

A decorative graphic on the left side of the slide. It features several pieces of blue and white striped paper, some of which are curled or folded. Scattered around and below the paper are numerous small, colorful dots in shades of blue, green, and dark blue. The background of the slide is a light gray with a subtle, wavy pattern.

## Updated Features

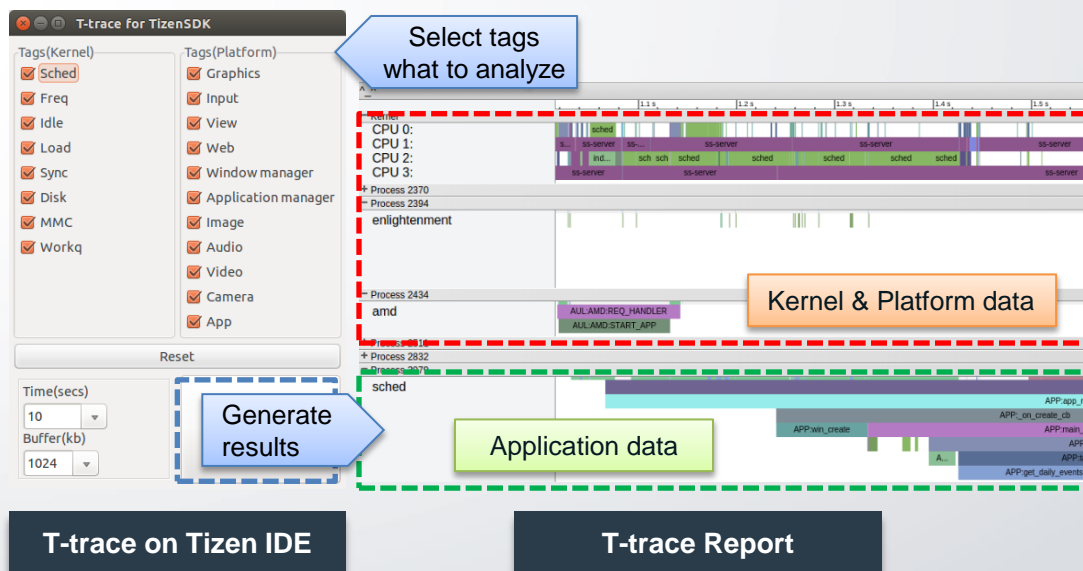

- Run, Debug and Profile

# T-trace: New Profiling Tool for Platform and Native Application

- A profiling tool for Tizen platform and native application

- Provides various data from

- Tizen Platform (pre-defined)
  - Graphics, Input, Multimedia, ...
  - Application/Windows manger, ...
- Kernel (pre-defined)
  - Scheduling,
  - CPU Load/Frequency ...
- Application (user-defined)

# Enhanced Emulator (1/2)

✓ **Don't you have Tizen devices?**

- **Circular wearable emulator**

- Shows circular display
- Supports rotary input using mouse

- **TV emulator (planned)**

- Enables TV application development without heavy TV devices
- Provides full-featured remote controller

# Enhanced Emulator (2/2)

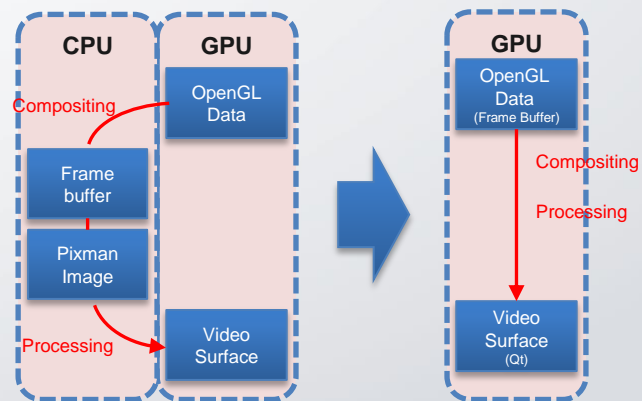

✓ Still hungry for emulator performance?

- **SMP acceleration**

- Fully utilizes host PC's multi-cores by the aid of KVM and HAXM
- Dramatically improves performance up to 3 times when running on quad cores

- **Direct rendering to relax host CPU**

- Only uses GPU to remove CPU-GPU transition overhead
- Allows to use more host CPU resources for other programs, such as, IDE

# Wrap-up

# New Benefits from the Latest Tizen SDK

---

- **Common**
  - Multi-platform support
  - Easy but powerful installation
  - Up-to-date online documentation and samples
  - Simplified developer's certification
  
- **Tools**
  - Enhanced native programming model and tools
  - Powerful analysis tools
  - State-of-the-art Emulator of high performance

**Thank you**
