IN MECHANICAL ENGINEERING

Tribology and dynamics of engine and powertrain

Fundamentals, applications and
future trends

Edited by Homer Rahnejat

Contents

<i>Contributor contact details</i>	<i>xix</i>
<i>Preface</i>	<i>xxv</i>
<i>Foreword</i>	<i>xxvii</i>
D. DOWSON	
<i>Introduction</i>	
R. PARRY JONES	<i>xxix</i>
Part I Introduction to <i>dynamics</i> and tribology within the <i>multi-physics</i> environment	
1 An introduction to multi-physics multi-scale approach	3
H. RAHNEJAT, Loughborough University, UK	
1.1 Introduction	3
1.2 Newtonian mechanics	6
1.3 Lagrange's equation and reduced configuration space	9
1.4 Multi-body mechanical systems	12
1.5 Engine as a multi-body system	20
1.6 Elasto-multi-body dynamics analysis	22
1.7 References and further reading	26
1.8 Nomenclature	28
1.9 Appendix: multi-physics analysis for investigation of manual transmission gear rattle – drive/creep rattle	29
Section I.I Fundamentals of tribology and dynamics	
2 Mechanisms and laws of friction and wear	41
D. ARNELL, University of Central Lancashire, UK	
2.1 Introduction	41

vi	Contents	
2.2	The nature of engineering surfaces	41
2.3	Surface topography and contact	42
2.4	The contact of rough surfaces	48
2.5	Friction	50
2.6	Wear	60
2.7	Future trends	71
2.8	Sources of further information and advice	71
2.9	References	72
3	Surface phenomena in thin-film tribology	73
	P. PROKOPOVICH and H. RAHNEJAT, Loughborough University, UK and M. TEODORESCU, Cranfield University, UK	
3.1	Introduction	73
3.2	A question of wetness	75
3.3	Meniscus action: surface tension	77
3.4	Contact angle of liquids	79
3.5	Estimation of interfacial tension between a liquid and a solid	81
3.6	Adhesion of rough surfaces	84
3.7	Intermolecular interactions and near-surface effects	92
3.8	van der Waals forces	93
3.9	Other near-surface effects	99
3.10	Conclusion	100
3.11	References	100
3.12	Nomenclature	103
4	Fundamentals of impact dynamics of semi-infinite and layered solids	105
	M. TEODORESCU, Cranfield University, UK; V. VOTSIOS, Atos, Spain; P. M. JOHNS-RAHNEJAT, (formerly) Imperial College London, UK and H. RAHNEJAT, Loughborough University, UK	
4.1	Introduction	105
4.2	Basic aspects of contact mechanics for elastic solids	107
4.3	Hertzian theory	111
4.4	Analytical treatment of contact mechanics of layered solids	114
4.5	Impact dynamics	116
4.6	Contact mechanics based on action of deformation potential	123
4.7	References	129
4.8	Nomenclature	130
5	Fluid film lubrication	132
	R. GOHAR, Imperial College London, UK and M. M. A. SAFA, Kingston University, UK	
5.1	Lubricant properties	132

5.2	Reynolds equation	137
5.3	The energy equation	148
5.4	The Navier–Stokes equations	151
5.5	Free surface behaviour of lubricant films	153
5.6	Externally pressurised (EP) gas journal bearings	154
5.7	Approximate design of oil thrust bearings	157
5.8	Thermal design of finite length bearings	162
5.9	Review of some unusual and recent applications of fluid film lubrication	167
5.10	References	168
5.11	Appendix: Design coefficients for plane thrust bearing pairs	170
6	Elastohydrodynamic lubrication F. SADEGHI, Purdue University, USA	171
6.1	Introduction	171
6.2	Conformal and non-conformal contacts	175
6.3	Regimes of lubrication	176
6.4	Elastohydrodynamic lubrication (EHL) minimum film thickness equations	177
6.5	Experimental film thickness and corroboration with analytical results	182
6.6	Thermal effects in elastohydrodynamic lubrication (EHL) contacts	183
6.7	Non-Newtonian fluid model	184
6.8	Boundary lubrication	185
6.9	Mixed elastohydrodynamic lubrication (EHL)	185
6.10	Surface roughness	191
6.11	Contact and internal stress	192
6.12	Application of elastohydrodynamic lubrication (EHL) theory to machine components	201
6.13	References and further reading	213
6.14	Nomenclature	220
7	Measurement of contact pressure under elastohydrodynamic lubrication conditions R. GOHAR, Imperial College London, UK and M. M. A. SAFA, Kingston University, UK	222
7.1	Introduction	222
7.2	Gauge manufacturing process	223
7.3	Applications using pressure gauges	227
7.4	Alternative methods of measuring contact pressure	241
7.5	Conclusions	244
7.6	References	245

Part II Engine and powertrain technologies and applications

Section II.I Overview

8	Tribological considerations in internal combustion engines D. R. ADAMS, Ford Dagenham Development Centre, UK	251
8.1	Introduction	251
8.2	Issues of cost, competition, and reliability in internal combustion (IC) engine tribology	253
8.3	Drivers for tribological design and innovation	254
8.4	A systems view of the piston/ring/cylinder bore interface	255
8.5	The development process in internal combustion (IC) engines	258
8.6	The piston in internal combustion (IC) engines	264
8.7	Piston rings in internal combustion (IC) engines	270
8.8	The cylinder bore surface	274
8.9	Design validation of internal combustion (IC) engines	279
8.10	Future trends	281
8.11	References	282
9	Predictive methods for tribological performance in internal combustion engines I. McLUCKIE, AIES Ltd, UK	284
9.1	Introduction	284
9.2	Integrated knowledge-based tribology systems	285
9.3	Application of integrated knowledge-based systems (IKBS) and elasto-hydrodynamics (EHD) to a race engine crank pin	289
9.4	Application of integrated knowledge-based systems (IKBS) and right-hand drive (RHD) to piston and liner	302
9.5	Application of integrated knowledge-based systems (IKBS) and right-hand drive (RHD) to turbocharger bearings	313
9.6	Engine friction: building a better understanding	331
9.7	Conclusions	337
9.8	Acknowledgements	339
9.9	References	339

Section II.II Tribology of piston systems

10	Fundamentals of lubrication and friction of piston ring contact V. D'AGOSTINO and A. SENATORE, University of Salerno, Italy	343
10.1	Introduction	343

10.2	Piston ring: history and basics	344
10.3	Piston rings classification	347
10.4	Lubrication models	350
10.5	A brief analysis of the main assumptions on the boundary conditions	356
10.6	Simplified two-dimensional Reynolds equation for oil ring	359
10.7	The contact between the asperities: mixed-lubrication regime	361
10.8	The multi-physics approach to ring friction	371
10.9	Ring flutter and collapse	378
10.10	Bore distortion in lubrication models	380
10.11	Laser-textured surfaces	380
10.12	Warm-up effect	381
10.13	Future trends	381
10.14	References and further reading	382
10.15	Notation	385
11	Measurement techniques for piston-ring tribology I. SHERRINGTON, University of Central Lancashire, UK	387
11.1	Introduction	387
11.2	Measurement of lubricating film thickness	392
11.3	Measurement of piston-ring friction	401
11.4	Measurement of piston-ring movement	407
11.5	Measurement of piston-ring wear	409
11.6	Measurement of ring zone temperature	411
11.7	Observation and measurement of lubricant movement and consumption	413
11.8	Future trends	417
11.9	Sources of further information	421
11.10	References	422
12	An ultrasonic approach for the measurement of oil films in the piston zone R. S. DWYER-JOYCE, University of Sheffield, UK	426
12.1	Introduction	426
12.2	Ultrasonic measurement of oil film thickness	429
12.3	Ultrasonic measurement equipment	433
12.4	Case study: measurement from a piston skirt	437
12.5	Case study: piston rings in a test bench	445
12.6	Overview	452
12.7	Conclusions	454
12.8	Acknowledgements	455
12.9	References and further reading	455

x	Contents	
13	Surface texturing for in-cylinder friction reduction I. ETSION, Technion, Israel	458
13.1	Introduction	458
13.2	Laser surface texturing (LST) for friction reduction in engines	461
13.3	Summary	467
13.4	References	467
14	Optimised textured surfaces with application in piston ring/cylinder liner contact R. RAHMANI, Loughborough University, UK and A. SHIRVANI and H. SHIRVANI, Anglia Ruskin University, UK	470
14.1	Introduction	470
14.2	Surface texturing	472
14.3	Application of surface texturing in tribology	473
14.4	Surface texturing methods	474
14.5	The mechanisms behind tribological improvements through surface texturing	476
14.6	Debates surrounding surface texturing	478
14.7	Surface texturing technology and internal combustion (IC) engines	481
14.8	The basic equations of tribology	482
14.9	Modelling of the textured surfaces	485
14.10	Solution methods	490
14.11	Optimisation of textured surfaces	493
14.12	Application of the optimum results in the piston ring/cylinder liner contacts	504
14.13	Conclusions	508
14.14	References	509
14.15	Nomenclature	514
15	Transient thermo-elastohydrodynamics of rough piston ring conjunction P.C. Mishra, H. Rahnejat and P. King, Loughborough University, UK	518
15.1	Introduction	518
15.2	A brief review	521
15.3	Compression ring cylinder liner conformability	524
15.4	Tribology of ring–bore conjunction	526
15.5	Results and discussion	532
15.6	Future trends	538
15.7	Acknowledgements	539
15.8	References	539
15.9	Nomenclature	540

Section II.III Valve train systems

16	Tribological issues in cam–tappet contacts M. KUSHWAHU, Ford Motor Company, UK	545
16.1	Introduction	545
16.2	The cam geometric profile	546
16.3	Lubrication analysis of the cam and tappet conjunction	548
16.4	The solution procedure	556
16.5	Simulation conditions	558
16.6	Results	558
16.7	Conclusion	563
16.8	References	565
17	A multi-scale approach to analysis of valve train systems M. TEODORESCU, Cranfield University, UK	567
17.1	Background	567
17.2	Aspects of valve train geometry and construction	569
17.3	Valve train as an integrated problem	571
17.4	Valve train kinematics: cam-to-flat follower contact	573
17.5	Valve train dynamics	574
17.6	Valve lift and cam profile	576
17.7	Cam–tappet tribology: lubricant reaction	578
17.8	Tribology of rough surfaces	581
17.9	Applications	583
17.10	References	585
17.11	Nomenclature	586

Section II.IV Engine bearings

18	Fundamentals of hydrodynamic journal bearings: an analytical approach S. BALAKRISHNAN, Mercedes Benz High Performance Engines, UK; C. McMINN, Ford Motor Company, UK and C. E. BAKER and H. RAHNEJAT, Loughborough University, UK	591
18.1	Introduction	591
18.2	Bearing geometry	592
18.3	Simple analytical solutions for journal bearings	593
18.4	Simple bearing selection	595
18.5	Determination of bearing loads	597
18.6	Thin shell or soft overlay bearings	602
18.7	Thermo-hydrodynamics	608

xii	Contents	
18.8	Tribological conditions	610
18.9	Concluding remarks	612
18.10	References	613
18.11	Nomenclature	613
19	Practical tribological issues in big-end bearings S. BOEDO, Rochester Institute of Technology, USA	615
19.1	Introduction	615
19.2	Bearing duty for big-end bearings	616
19.3	Geometry of big-end bearings	619
19.4	Cyclic minimum film thickness	620
19.5	Oil flow in big-end bearings	624
19.6	Power loss in big-end bearings	626
19.7	Sample application of design charts: four-stroke automotive engine	627
19.8	Experimental results pertaining to big-end bearings	628
19.9	Future trends	630
19.10	References	631
19.11	Principal nomenclature	633
20	Tribology of big-end bearings P.C. MISHRA and H. RAHNEJAT, Loughborough University, UK	635
20.1	Introduction	635
20.2	Brief review of the literature	636
20.3	Bearing geometry	638
20.4	Lubricant rheology	639
20.5	Bearing load	645
20.6	Method of solution	646
20.7	A case study	648
20.8	Effect of surface roughness and pattern	650
20.9	Tribological problems in big-end bearing	652
20.10	References	657
20.11	Nomenclature	658

Section II.V Drivetrain systems

21	An introduction to noise and vibration issues in the automotive drivetrain and the role of tribology M. MENDAY, Loughborough University, UK	663
21.1	Introduction to drivetrain noise, vibration, harshness (NVH)	663
21.2	The application of multibody dynamics (MBD) analysis	664

21.3	Noise, vibration, harshness (NVH) characteristics	665
21.4	Summary of tribological contacts	666
21.5	Airborne and structure-borne noise	667
21.6	Noise and vibration paths from the driveline into the body	667
21.7	Signal analysis	668
21.8	Examples of high-energy impacts in the drivetrain	668
21.9	Shuffle	676
21.10	Whoop (clutch in-cycle vibration)	676
21.11	Summary of drivetrain noise, vibration, harshness (NVH) issues	678
21.12	Future trends	678
21.13	References	678
22	Friction lining characteristics and the clutch take-up judder phenomenon with manual transmission M. MENDAY and H. RAHNEJAT, Loughborough University, UK	680
22.1	Introduction	680
22.2	Background	680
22.3	Description of clutch take-up judder	681
22.4	Judder and shuffle	683
22.5	Multi-body dynamics analysis of judder	684
22.6	Results and discussion of numerical findings of multi-body dynamics analysis of judder	692
22.7	Vehicle studies and design of experiments for multi-body dynamics analysis of judder	696
22.8	Overall conclusions of multi-body dynamics analysis of judder	697
22.9	Considerations for judder elimination/resolution	700
22.10	Future trends	701
22.11	References	701
22.12	Nomenclature	702
23	Contact mechanics of tyre–road interactions and its role in vehicle shuffle G. MAVROS, Loughborough University, UK	703
23.1	Introduction	703
23.2	Shuffle as a drivetrain error state	704
23.3	Basic model of vehicular driveline	706
23.4	Results of driveline simulation	711
23.5	Tyre modelling for shuffle analysis	714
23.6	Steady state tyre modelling	715
23.7	A brush-type model for shuffle analysis	716
23.8	Relationship between the brush model and the magic formula	721

xiv	Contents	
23.9	Transient tyre response: a first approach	722
23.10	Further tyre modelling possibilities	726
23.11	Case study: the influence of transient tyre behaviour on shuffle	728
23.12	References	731
23.13	Notation	733
24	Tribology of differentials and traction control devices S. K. MOHAN, Magna Powertrain, USA	735
24.1	Introduction	735
24.2	Vehicle drivetrain architecture	736
24.3	The basics of vehicle propulsion and dynamics	738
24.4	The need for differentials and slip control devices	744
24.5	Types of slip control device	747
24.6	Advantages of electronically controllable ‘active’ slip control devices	758
24.7	Tribological considerations in the design and development of slip control devices	759
24.8	Modelling and simulation of traction control devices	764
24.9	Future trends	767
24.10	Sources of further information and advice	768
24.11	Acknowledgements	770
24.12	References	770
24.13	Notation	772
25	Non-linear dynamics of gear meshing and vibro-impact phenomenon S. NATSIAVAS and D. GIAGOPOULOS, Aristotle University, Greece	773
25.1	Introduction	773
25.2	Mechanical model and equations of motion of example gear pair	775
25.3	Typical numerical results from mechanical model and equations of motion of example gear pair	779
25.4	Future trends	787
25.5	Conclusions	788
25.6	References	789
25.7	Nomenclature	791
26	Rattle and clatter noise in powertrains – automotive transmissions S. N. DOĞAN, Daimler AG, USA	793
26.1	Introduction	793
26.2	Significant noises in automotive transmissions	794

26.3	Investigation strategy for rattling and clattering noises in automotive transmissions	800
26.4	Automotive transmission lubricants	806
26.5	Peripheral instruments for measuring drag torque	811
26.6	Automotive transmissions investigated	813
26.7	Automotive transmission lubricants studied	814
26.8	Automotive transmission measurement results	814
26.9	Parameter studies for rattle and clatter noises in automotive transmissions	820
26.10	Correlation of measurement and calculation results in automotive transmissions	824
