Address Management Support Analyst
USPS® Enterprise Analytics and Geospatial Technology
National Customer Support Center - Memphis TN

Mail owners and mail service providers may use Address Management pre-mailing products and services to validate, standardize, and update addresses for their customers.

- **DSF²®** – assists in obtaining accurate delivery address information and identify erroneous addresses contained in an address file. It provides additional information such as type of delivery and LACSLink[®] information.
- **AMS API** – used to develop address matching software and provides access to USPS[®] matching logic. Used to verify the accuracy of ZIP+4[®].
- **CASS[™] / MASS[™]** – validates and standardizes addresses to the 11-Digit DPV[®] (Delivery Point Validated) ZIP Code[™]. Includes LACS^{Link}[®] and Suite^{Link}[®]. CASS and MASS are Certification Programs.
- **NCOA^{Link}®** – validates, standardizes and looks for change-of-address information for those customers that have moved. NCOALink is only available through licenses from the USPS[®].
- **AEC & AECII[®]** – helps to correct addresses that cannot be validated or standardized using other methods.

Addressing Requirements

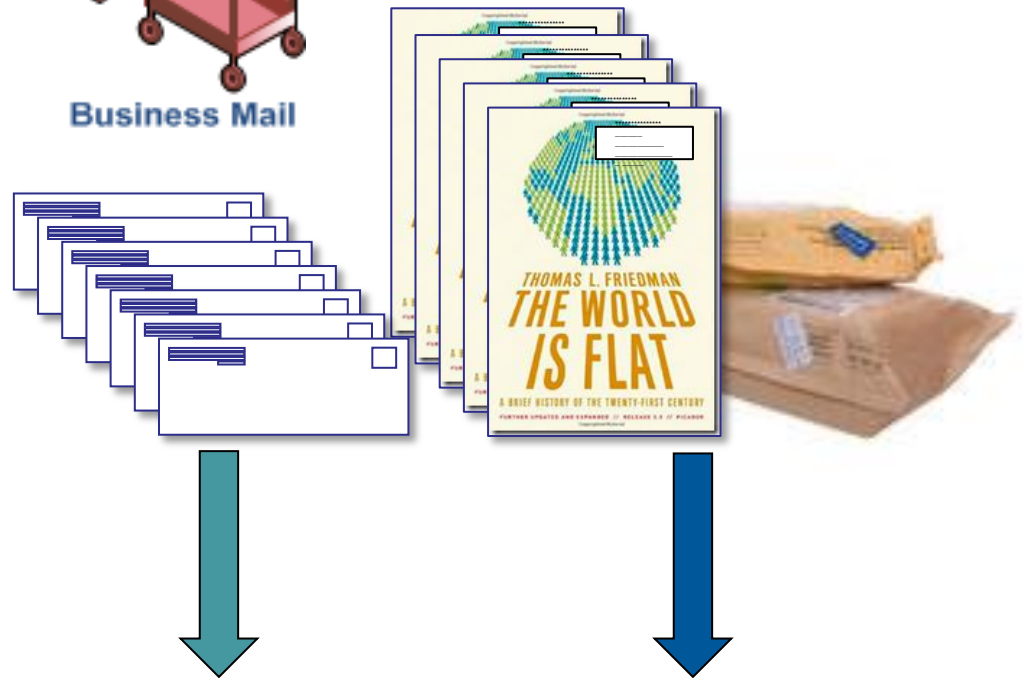

Find Certified Vendors and Providers

<http://beta.postalpro.usps.com/>

- **Sender applies the name and address, ancillary endorsements to request address corrections (if desired), and the postage to their mail.**
- **Business mailers apply the Intelligent Mail® barcode (IMb®) to qualify for postage discounts and to request ACS™ and IMb Tracing®.**
 - **No Address Corrections**
 - **Manual Address Corrections**
 - **Ancillary endorsements:**
 - **Change Service Requested**
 - **Address Service Requested**
 - **Return Service Requested**
 - **Temp – Return Service Requested (First-Class Mail Only)**
 - **Forwarding Service Requested (Does not provide address corrections & does not meet Move Update requirements)**
 - **Ancillary endorsements are *restricted when Alternative Addressing is used (Or Current Resident, Postal Customer, etc).**

* First-Class Mail® with Alternative Addressing may request ACS with Change Service Requested Opt 1. Mail is not forwarded. ACS Nixie notice is provided if UAA. The mail is discarded.

- Mail is presented to a BMEU, drop-shipped to a Post Office™, or dropped into a collection box

- The mail is processed on Postal automated equipment to sort it to the Delivery Unit and Carrier using the ZIP Code™.

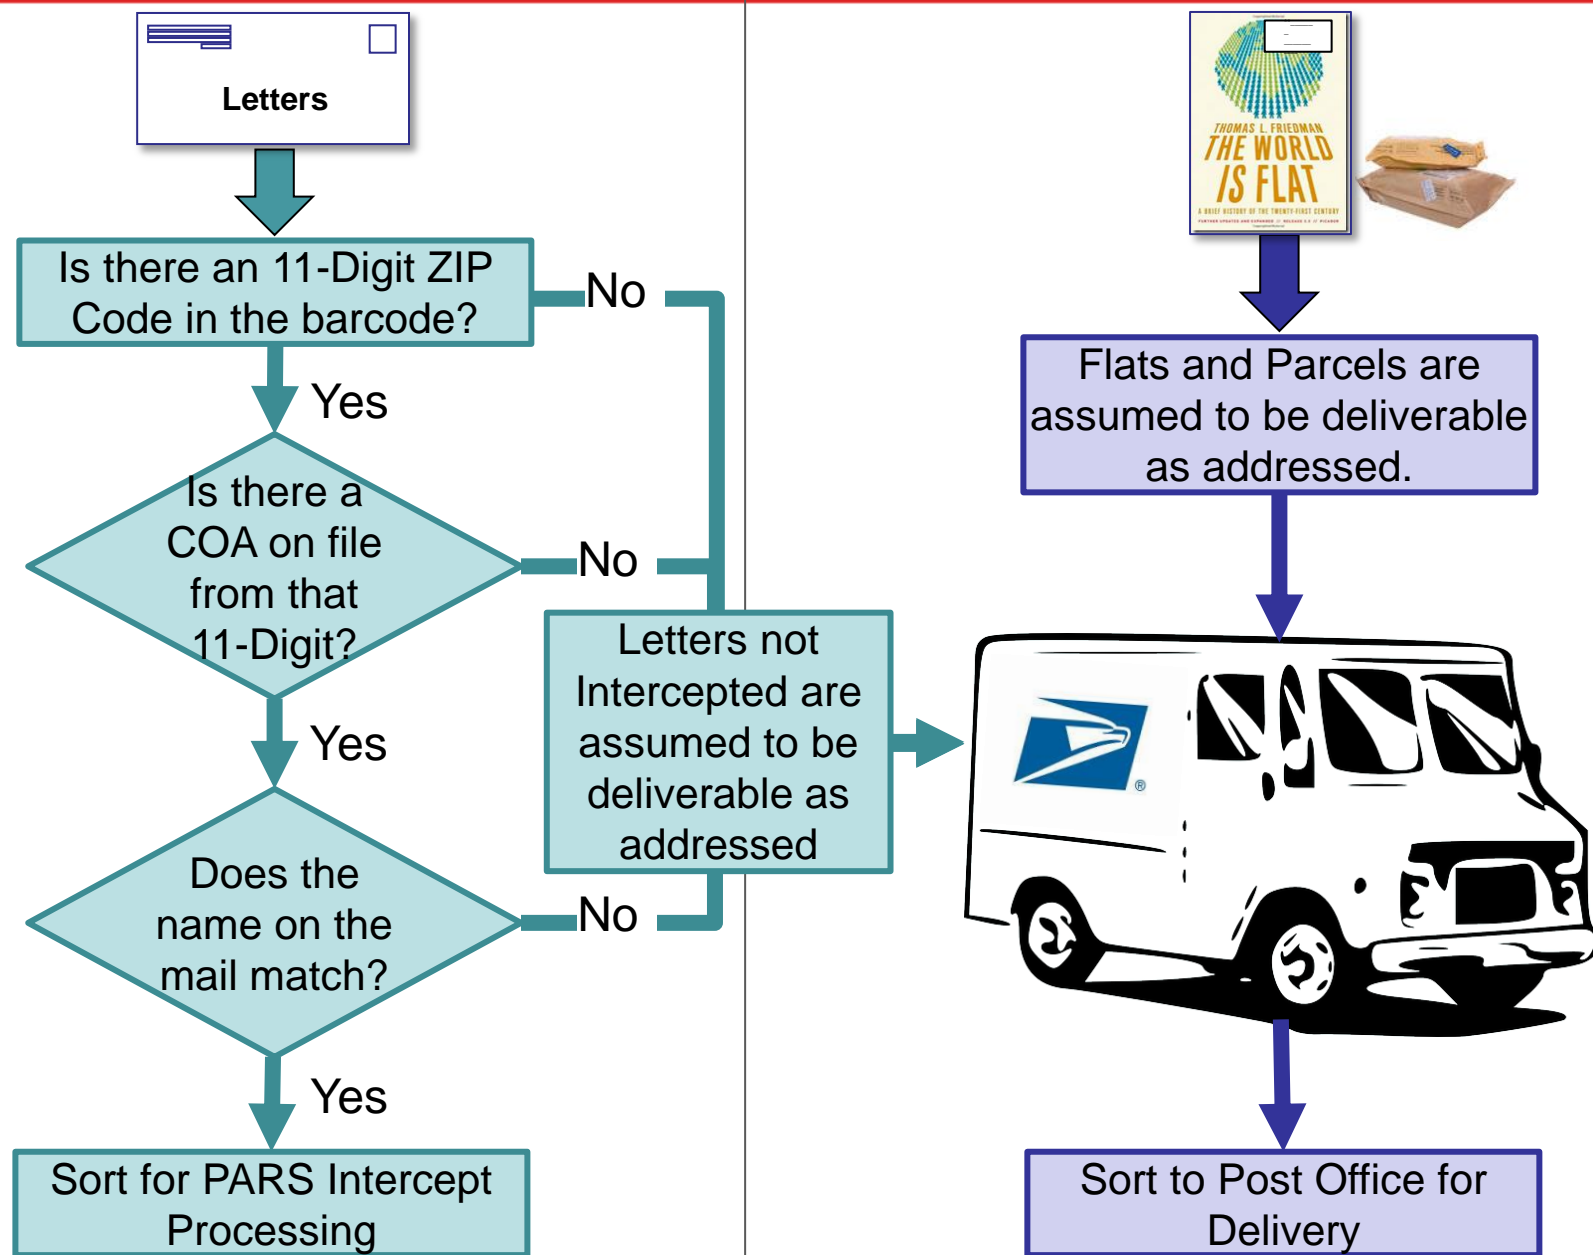

Letters are processed on Letter
Sorting Equipment

Flats & Parcels are processed on
Flats & Parcel sorting equipment

- The Postal Automated Redirection System (PARS) is available on most letter automation equipment in USPS Mail Processing facilities.

Letters

This branch describes

PARS Intercept

Letter mail that is redirected by
Letter Automation to the new
address due to a COA

Intercepted mail is sent to the
P&DC that has a PARS CIOSS*

* Combined Input/Output Sub System. There are 61 USPS facilities that have CIOSS machines. The CIOSS may not be in the same facility as the one that Intercepted the letter.

Flats & Parcels Letters not Intercepted

This branch describes

Delivery Unit, PARS & CFS Processing

Carrier ID Forward (CIF)

& RTS (Nixie)

Flats, Parcels & Letter mail not Intercepted.
(There is no Intercept for Flats & Parcels. They
always sort to the old address)

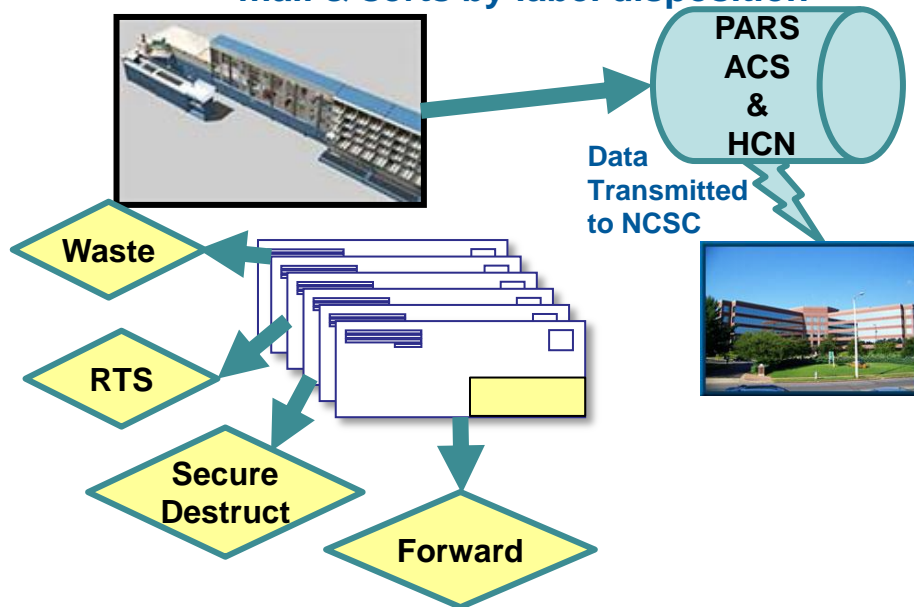

Delivery Employee

PARS Intercept Letters

An image of the letter is used by PARS to verify the COA Match. The CLOSS machine applies the label to the COA mail & sorts by label disposition

- Name and address matching rules for PARS Intercepted mail is very strict. The address must match exactly, and the Name match allows for limited variations.
- The mail is treated based on the mail class, the age of the COA, and ancillary endorsement requests:
 - Forwarded – R-IMb (aka 93 R-IMb) for NEW address
 - Returned To Sender – R-IMb for Return Address
 - Waste – No IMb or IMb for Secure Destruction
- ACS & Hard Copy address correction PS Form 3547/3579 data is generated and transmitted to the NCSC.

Flats & Parcels Letters not Intercepted

**Delivery Employee

Separate COA
Letters, Flats, &
Parcels

Separate Letters, Flats,
& Parcels, then sort by
UAA Reason:

- Attempted Not Known
- In Dispute
- Insufficient Address
- Illegible
- No Mail Receptacle
- Deceased
- Unable to Forward
- Refused
- No Such Number
- No Such Street
- Unclaimed
- Vacant

PARS Intercept Letters

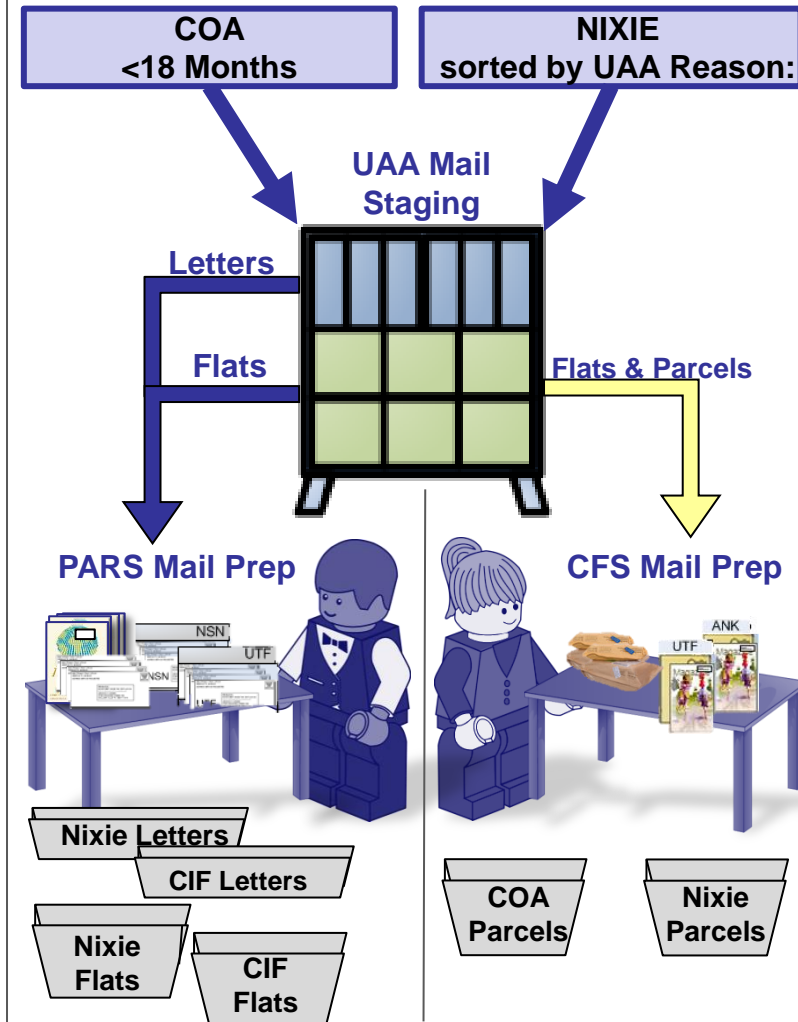

National Customer Support Center

ACS & HCN Data from PARS Intercepted Mail is processed & distributed by the NCSC

Flats & Parcels Letters not Intercepted

UAA Separator Cards are used to identify the UAA Reason for NIXIE mail in both PARS and CFS

Flats & Parcels and Letters not Intercepted

**Carrier ID Fwd & RTS
Nixie Letters are sent
to PARS CIOSS Site**

There are 61 USPS facilities that have CIOSS machines.

**Carrier ID Fwd & RTS
Nixie Flats are sent to
FPARS *AFSM100 Site**

* Advanced Flats Sorting Machine. There are 17 USPS facilities that have FPARS enabled flat sorters.

**COA & Nixie parcels &
PARS/FPARS Rejects
are sent to **CFS Site**

** Computerized Forwarding System. There are 22 CFS sites.

UAA Mail Processing PARS FPARS & CFS

PARS CIF & RTS

FPARS CIF & RTS

CFS

- Name and address matching rules are more relaxed in CIF, allowing for some limited variations.
- The mail is treated based on the mail class, the age of the COA, and ancillary endorsement requests:
 - Forwarded – R-IMb (aka 93 R-IMb) for NEW address
 - Returned To Sender – R-IMb for Return Address
 - Waste – No IMb or IMb for Secure Destruction (not available in CFS or FPARS)
 - Return to Carrier – R-IMb on the label is for Carrier Route of address
- PARS and FPARS labels are applied by the machine. ACS & Hard Copy address correction data (Forms 3547/3579) is generated and transmitted to the NCSC.
- CFS applies the labels by hand. ACS data is generated and transmitted to the NCSC. Hard Copy Notices are sent directly from the CFS unit.

PARS CIF & RTS Letters and FPARS CIF & RTS Flats

PARS CIOSS applies the label to the mail & sorts by label disposition or IMb

Business Customer Gateway or PostalOne! Push/Pull Service

...and that's now the United States Postal Service processes Undeliverable-As-Addressed Mail.

The default (no endorsement) treatment for:

- **First-Class Mail®** is forwarded or returned at no additional charge.
- **Periodicals** are forwarded for 60 days and a manual address correction is sent after 60 days (PS Form 3579). Any further pieces received are discarded. If Nixie*, a notice is sent every time.
- **Standard Mail® & Bound Printed Matter** is discarded with no notice to the mailer.
- **Package Service® & Parcel Select®** is forwarded to the addressee as postage due. Nixies* are returned, forwarding (if appropriate) and return postage is charged. **NOTE: The IMb is not used on parcels.**

*Nixie – mail undeliverable for reasons other than a change-of-address.

Address Corrections & Disposition Options:

- Return it
- Discard it
- Forward or Return it
- Forward or Discard it
- Forward or Securely Destroy it
- Periodicals that use ACS™ can schedule their address corrections and receive follow-up notices

Ask yourself:

- ✓ Do you need the undeliverable mail piece back?
- ✓ Does it contain PII (Personally Identifiable Information)?
- ✓ If so what does it cost you to shred it?
- ✓ Will you let the USPS® shred your undeliverable mail?

Secure Destruction was created in response to mailers asking to reduce handling costs for “Return to Sender” mail with Privacy Protected Information (PPI)

Applies only to letter-sized First-Class Mail®

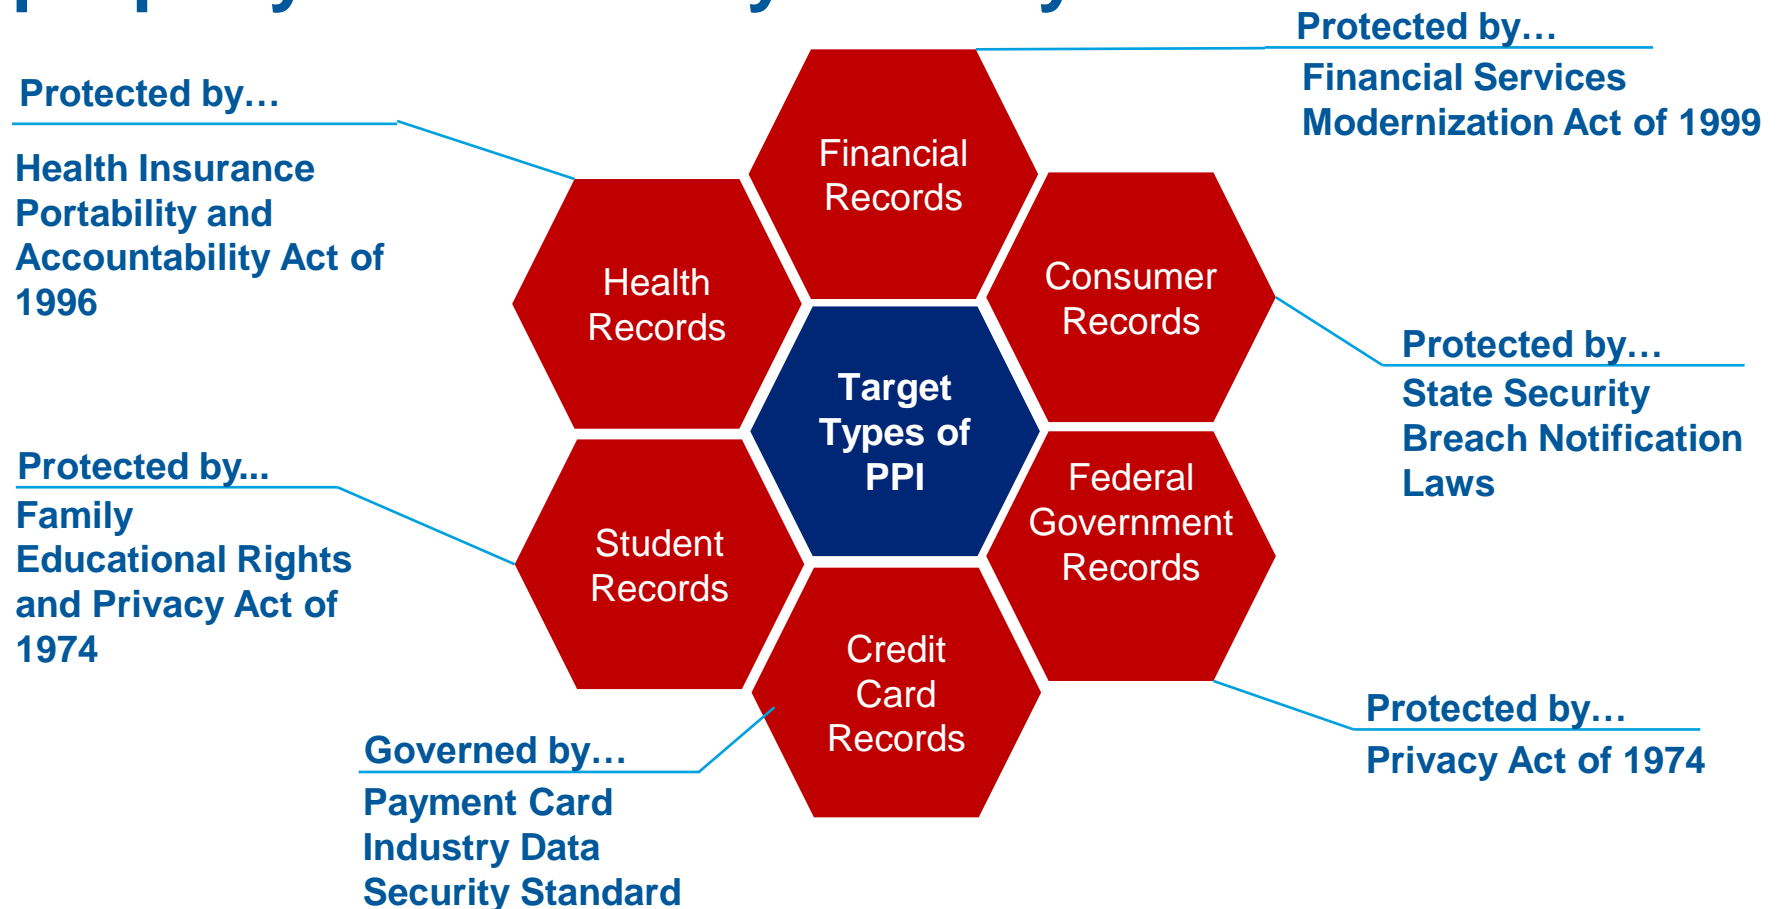

Performed by USPS® employees in USPS® facilities

An opt-in service for mailers provided at no additional fee

Secure Destruction minimizes UAA Return to Sender mail for the USPS® facility and the mailer.

Secure Destruction may be of interest to mailers who face the risk of liabilities if they don't properly and securely destroy PPI

What additional in-house quality controls are used to ensure undeliverable SD mail is securely destroyed ?

Mail Verification - All SD mail generated undergoes individual mailpiece verification prior to destruction

Standard Handling Procedures - Mail that is not eligible or that could not be processed is handled per standard procedures

Postal Inspection Service - Periodic security assessments of Secure Destruction processes and procedures are conducted

Office of the Inspector General - Per Title 18, United States Code, investigations will occur for any allegations of mail theft by individuals and entities under contract with the Postal Service

The Postal Service has a long history of protecting the sanctity of the mail.

Securely destroying mail within USPS® processing facilities provides three types of benefits:

Environmental - Reduces the carbon footprint of UAA mail through recycling and eliminating unnecessary reverse logistics associated with returning mailpieces to the sender

Economic - Reduces the costs for mailers for handling and destroying RTS mail in-house or through third party contactors

Security - Strengthens mailers' information security programs, processes, and procedures

Secure Destruction shreds to a smaller size than NAID standard

*Excerpt from the NAID
Auditing Criteria June 2014*

NAID maximum shred size:

- Width: 0.75 inch
- Length 2.5 inches
- Surface Area: 1210 mm²

USPS® maximum shred size:

- Width: 0.24 inch (6mm)
- Length: 1 inch (25.4mm)
- Surface Area: 152 mm²

MEDIA ENDORSEMENT

PAPER or PRINTED MEDIA is destroyed by commercial grade destruction equipment with the following OEM specifications or produces particle sizes no larger than those listed below (applicant to check and complete details for all equipment used):

- ☐ Continuous Shred:
Width (max): 5/8 inch & Length: Indefinite
- ☐ Cross Cut or Pierce & Tear:
Width (max): 3/4 inch & Length (max): 2.5 inches
- ☐ Pulverizer, Disintegrator or Hammermill*
Screen Size (max): 2-inch diameter holes
- ☐ Unspecified Equipment
Please describe the type of equipment and cutting mechanism specifications (screen hole size*, blade width, etc.): _____

USPS uses industrial cross-cut shredders

International Standard DIN 66399 has seven levels for paper data destruction

P-1: General Data
Surface Area: \leq to 2000mm²
or strip width: \leq 12mm
(unlimited length)

P-4: Particularly Sensitive & Confidential Data
Surface Area: \leq 160mm² and
Strip width: \leq 6mm

P-Level 5: Secret Data
Surface Area: \leq 30mm² and
strip width: \leq 2mm

P-2: Internal Data Surface
Area: \leq 800mm²
or Strip width: \leq 6mm
(unlimited length)

P-Level 6: Highly Secret Data
Surface Area: \leq 10mm² and strip
width: \leq 1mm

P-3: Sensitive & Confidential Data
Surface Area: \leq 320mm²
or Strip width: \leq 2mm
(unlimited length)

P-Level 7: Top Secret Data
Surface Area: \leq 5mm² and
strip width: \leq 1mm

USPS® Secure Destruction shred size is more stringent than NAID, DIN, and common US industry practice for documents with sensitive and/or confidential information

NAID

Surface Area: 1210 mm²

Dimension: 0.75" x 2.5"

DIN Standards Level P-3
Surface Area: ≤ 320 mm² or
Strip width: ≤ 2mm

Common Industry Practice
Surface Area: 252 mm²
Dimension: 0.63" x 0.63"
(5/8" x 5/8")

DIN Standards Level P-4
Surface Area: ≤ 160 mm² and
Strip width: ≤ 6mm (0.24")

USPS SD Standard
Surface Area: 152 mm²
Dimension: 0.24" x 1"

A USPS® Secure Destruction industrial cross-cut shredder and paper shred size is pictured below
