1 Introduction

The UPort 1110 and the UPort 1130 are USB-to-serial adaptors, an easy way to add a COM port to your system. The UPort 1110 provides one RS-232 port and the UPort 1130 provides one RS-422/RS-485 port. As a plug and play USB device, the adaptors are perfect for mobile, instrumentation, and point-of sale applications.

The following topics are covered in this chapter:

- **Overview**
- **D** Package Checklist
- **Product Features**
- **Product Specifications**
- **LED** Indicators

Overview

The UPort 1110 and UPort 1130 are part of Moxa's UPort line of USB-to-serial adaptors. The UPort line provides a range of easy-to-use solutions for adding COM ports through a PC's USB port. Simply install the drivers, connect the UPort to your computer, plug in your serial devices, and you're ready to go. Programming is not required, and you do not need to worry about IRQs, configuring a board, power requirements, or connection schemes.

The UPort 1110 and UPort 1130 provide single COM port expansion. The UPort 1110 adds one RS-232 port to your computer, which is the same type of COM port that is built into most PC motherboards. The UPort 1130 adds one port that is configurable for RS-422, 2-wire RS-485, and 4-wire RS-485 modes. Both models can operate at speeds of up to 12 Mbps, which is much faster than the current maximum serial transfer rate.

The adaptor is bus-powered, so no external power supply is required.

Package Checklist

The following items are included in your UPort package:

- UPort 1110 or UPort 1130 USB-to-Serial Adaptor
- UPort Documentation and Software CD
- UPort 1110/1130 Quick Installation Guide
- 5-year Warranty Statement

The UPort 1130 also comes with the following item:

• Mini DB9F-to-Terminal-Block Converter

NOTE: Notify your sales representative if any of the above items is missing or damaged.

Product Features

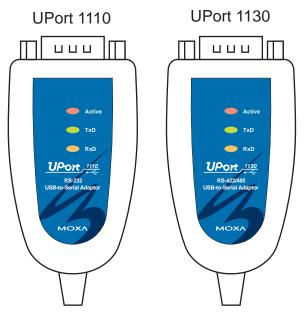

The UPort adaptor has the following features:

- Full-Speed USB operation at up to 12 Mbps
- Additional I/O or IRQ not required
- Serial transmission speed up to 921.6 Kbps
- 64-byte FIFO and built-in hardware and software flow control
- Built-in 15 KV ESD protection
- Support for RS-422, 2-wire RS-485, and 4-wire RS-485 (UPort 1130 only)
- Terminal block adaptor (UPort 1130 only)

LED Indicators

Name	Description
Active	This LED indicates normal operation. If the driver is installed correctly and the adaptor is plugged into a functioning USB port, the Active LED will light up and remain on. If the LED does not light up, there may be a problem with the adaptor, the driver installation, or PC configuration.
TxD	This LED blinks when the adaptor transmits data through its COM port.
RxD	This LED blinks when the adaptor receives data through its COM port.

Installation and Configuration

Installation of the adaptor is a simple process. First install the driver, then plug the adaptor into a USB port. When the adaptor is plugged in, Windows will load the correct drivers for the adaptor and the new COM port. In this chapter, basic installation and configuration procedures are explained. Although the installation screens will be for Windows 2000, the procedures are essentially the same for Windows 98 and later versions.

The following topics are covered in this chapter:

- □ Initial Driver Installation
- □ Hardware Installation
 - ➢ Windows 98 and Windows 2000
 - ➢ Windows XP and Windows 2003
- **Configuring the COM Port**
- **Configuring the Adaptor**
- **Removing the Adaptor**
- **Uninstalling the Driver**

Initial Driver Installation

The Documentation and Software CD will contain the drivers for the adaptor. You may also download the drivers at <u>www.moxa.com</u>. The installation procedure is the same for all Windows operating systems.

Use Windows Explorer to locate the driver installation file, which will be **Setup** or **Install**. On the Documentation and Software CD, this file will be located in the **UPort 1100/Software** folder, filed by operating system. Double-click the **Setup** or **Install** file.

1. The Setup Wizard will open. Click **Next** to begin installing the driver.

Hardware Installation

After installing the driver, plug the adaptor into any upstream USB port, such as a USB port on your computer. Windows will automatically detect the adaptor and begin installing the driver. When the Windows finishes installing the driver for the adaptor, it will then detect a new COM port, and will then install another driver for the new COM port.

ATTENTION

For best results, we recommend that you install the driver before plugging the adaptor into the USB port. Please refer to the previous section on Initial Driver Installation for instructions.

Windows 98 and Windows 2000

The following instructions are for Windows 98 and Windows 2000 systems:

1. After plugging the adaptor into a USB port, the **Found New Hardware** window should open automatically. The USB icon indicates that the USB port is being installed. No action is required.

2. Windows 98 users may skip to the next step. On Windows 2000 systems, a window will pop up cautioning you that this software has not passed Windows logo testing. This is a standard warning, and Moxa has thoroughly tested the driver for safe Windows operation. Please click **Yes** to proceed.

3. Windows will automatically detect and install the new serial port. No further action is required

Configuring the COM Port

After the driver and hardware have been successfully installed, the new COM port will have a COM number and can be accessed and controlled just like your PC's built-in COM ports. If you need to change the baud rate, parity, or other COM port settings, you may use your serial communication application to make those changes. You may also go to Device Manager and right-click the **MOXA USB Serial Port**, which will be listed under **Ports** along with your PC's built-in COM ports. In the context menu that pops up, you may select **Properties** in order to modify the COM port settings.

Configuring the Adaptor

If you need to change the COM number that the adaptor assigns to the COM port, or adjust other advanced settings, you may go to Device Manager and right-click the UPort adaptor, which will be listed under **Multi-port serial adaptors**. In the context menu that pops up, you may select **Properties** in order to modify the COM port settings.

In the **Port Configuration** tab, you will see the new COM port listed. Click **Port Setting** to modify the COM number and other parameters.

ATTENTION

Before modifying these settings, make sure that you have closed any applications that may be accessing the COM port, such as HyperTerminal.

You may change the Port Number and enable or disable the Fast Flush function. For the UPort 1130, you may also select between RS-422, 2-wire RS-485, and 4-wire RS-485 modes. Please note that **Auto Enumerating COM Number** and **Set the change to all ports** are not available for this model of UPort.

The Fast Flush function is specifically designed to handle Win32 PurgeComm() function calls and is enabled by default. When Fast Flush is enabled, the driver will automatically clear the local buffer when it receives a PurgeComm() command. When Fast Flush is disabled, the driver will repeatedly query the adaptor until it verifies that there is no more data in the buffer. Disabling this function can cause lower throughput for applications that use PurgeComm() heavily.

Removing the Adaptor

The adaptor is a plug and play device. No special procedures are required to remove the adaptor; you may simply pull the adaptor out of the USB port. You should verify that no data is being transmitted before removing the adaptor.

Removing the adaptor does not remove the drivers. The drivers remain in place so that the adaptor can be automatically detected and installed if it is pluged back into the USB port.

The adaptor can also be uninstalled through the Device Manager, the same as other Windows devices. Right-click the adaptor, which will be found under **Multi-port serial adaptors**, then select **Uninstall** from the context menu.

Uninstalling the Driver

The UPort driver may be removed through Add/Remove Programs in the Windows Control Panel. Click **Remove** next to **MOXA UPort 1110/1130 Windows Driver Ver1.3**.

A Pin Assignments

UPort DB9 Pin Assignments

The UPort 1110 and UPort 1130 use male DB9 connectors. Pin assignments are shown in the following diagram:

		UPort 1110	UPort 1130	
DB9 (male)	Pin	RS-232	RS-422 4-wire RS-485	2-wire RS-485

	5	GND	GND	GND
	6	DSR (in)	-	-
	7	RTS (out)	-	-
	8	CTS (in)	_	_

Terminal Block Pin Assignments

The UPort 1130 comes with a DB9 to terminal block converter, with pin assignments as shown below:

Terminal Block	Pin	RS-422 4-wire RS-485	2-wire RS-485
	1	TxD+(B)	-
	2	TxD-(A)	-
	3	RxD+(B)	Data+(B)
	4	RxD-(A)	Data-(A)

Problem Description

Please describe the symptoms of the problem as clearly as possible, including any error messages you see. A clearly written description of the problem will allow us to reproduce the symptoms and expedite the repair of your product.

Product Return Procedure

For product repair, exchange, or refund, the customer must:

- Provide evidence of original purchase.
- Obtain a Product Return Agreement (PRA) from the sales representative or dealer.
- Fill out the Problem Report Form (PRF). Include as much detail as possible for a shorter product repair time.
- Carefully pack the product in an anti-static package and send it, pre-paid, to the dealer. The PRA should be visible on the outside of the package and should include a description of the problem along with the return address and telephone number.
