### Revision Control

Version	Date	Change Description	Author
1.00	4/04/08	Initial draft.	Jim Ostrognai
1.1	4/24/09	Cisco Fixed many Bugs. Re-verified with Version 12.4(22)T1, RELEASE SOFTWARE (fc5)	David Kriebel

## SRTP with Cisco Gateways

---

### Introduction

The configuration on the preceding pages is provided as a courtesy and should not be taken as exact representations of any customer environment. The configuration presented may not be the best solution for larger more complex networks. This document's purpose is to provide a resource for network engineers prior to implementation. Cisco Systems could change features and products at anytime without the knowledge of Interactive Intelligence.

Interaction Center 3.0 introduces the feature to secure calls. With industry standard Transport Layer Security (TLS) the signaling can be encrypted for endpoint authentication. Interaction Center uses RFC 2246 TLS Version 1.0, RFC 3268 AES for TLS, and RFC 4568 Security Descriptions in SDP (SDS).

Interaction Center can easily use Secure Real-time Transport Protocol (SRTP) **RFC 3711** to secure and encrypt the audio packets. Using these two methods together can eliminate problems with interception, modification and fabrication. Be sure to read ***Interaction Center Security Concepts*** at [www.inin.com](http://www.inin.com) for the detail on Interaction Center Security features and configuration options.

## S RTP with Cisco Gateways

---

### Gateway Configuration

We were able to successfully integrate using the following Cisco IOS version and hardware.

```
Cisco IOS Software, 2800 Software (C2800NM-ADVENTERPRISEK9_IVS-M), Version
12.4(15)T3, RELEASE SOFTWARE (fc1)
Technical Support: http://www.cisco.com/techsupport
Copyright (c) 1986-2008 by Cisco Systems, Inc.
Compiled Thu 24-Jan-08 15:26 by prod_rel_team
```

```
ROM: System Bootstrap, Version 12.4(13r)T5, RELEASE SOFTWARE (fc1)
```

```
Delta uptime is 17 hours, 0 minutes
System returned to ROM by reload at 16:34:16 east Thu Apr 3 2008
System restarted at 16:35:40 east Thu Apr 3 2008
System image file is "flash:c2800nm-adventerprisek9_ivs-mz.124-15.T3.bin"
```

This product contains cryptographic features and is subject to United States and local country laws governing import, export, transfer and use. Delivery of Cisco cryptographic products does not imply third-party authority to import, export, distribute or use encryption. Importers, exporters, distributors and users are responsible for compliance with U.S. and local country laws. By using this product you agree to comply with applicable laws and regulations. If you are unable to comply with U.S. and local laws, return this product immediately.

A summary of U.S. laws governing Cisco cryptographic products may be found at:

<http://www.cisco.com/wwl/export/crypto/tool/stqrg.html>

If you require further assistance please contact us by sending email to [export@cisco.com](mailto:export@cisco.com).

```
Cisco 2811 (revision 53.50) with 247808K/14336K bytes of memory.
Processor board ID FTX1019A372
2 FastEthernet interfaces
5 Serial interfaces
1 Serial(sync/async) interface
1 Channelized T1/PRI port
1 Virtual Private Network (VPN) Module
DRAM configuration is 64 bits wide with parity enabled.
239K bytes of non-volatile configuration memory.
1000944K bytes of ATA CompactFlash (Read/Write)
```

```
Configuration register is 0x2102
```

## SRTP with Cisco Gateways

---

### Hardware Configuration

The use of SRTP on a Cisco gateway carries a hefty cost. Using the codec complexity of secure will use more DSP resources than using a codec without this added security. With a NM-HDV module, we could only get 12 channels of SRTP on a PRI. Consult [www.cisco.com](http://www.cisco.com) for details on the supported hardware and loading characteristics. In this example we are setting up a simple ISDN PRI with NI2 and DSP security.

```
Delta(config)#voice-card 1
Delta(config-voicecard)#codec complexity secure
Delta(config)#controller t1 1/0/0
Delta(config-controller)#pri-group timeslots 1-12
Delta(config-controller)#framing esf
Delta(config-controller)#linecode b8zs
Delta(config-controller)#no shutdown
Delta(config-controller)#exit
Delta(config)#voice-port 1/0/0:23
Delta(config-voiceport)#no shutdown
Delta(config)#interface Serial1/0/0:23
Delta(config-if)#isdn switch-type primary-ni
Delta(config-if)#isdn incoming-voice voice
```

### Global Configuration

You can configure TLS and SRTP at the global or dial-peer level. These examples shows configuration at the global level and at the dial-peer level. Even though the Cisco doc claims to support SRTP fallback it was not tested.

```
Delta(config)#voice service voip
Delta(conf-voi-serv)#srtp
Delta(conf-voi-serv)#sip
Delta(conf-serv-sip)#url sips
Delta(conf-serv-sip)#session transport tcp tls
```

### Certificate Configuration

In this example the Gateway needs to generate a certificate to be signed by Interaction Center. Interaction Center is the Certificate Authority.

1. Generate the Key Pair that will be signed by the IC Server

```
Delta#config t
Enter configuration commands, one per line. End with CNTL/Z.

Delta(config)#crypto key generate rsa general-keys label ININ-Key exportable
The name for the keys will be: ININ-Key
```

## S RTP with Cisco Gateways

---

Choose the size of the key modulus in the range of 360 to 2048 for your General Purpose Keys. Choosing a key modulus greater than 512 may take a few minutes.

```
How many bits in the modulus [512]: 1024
% Generating 1024 bit RSA keys, keys will be exportable...[OK]
```

2. Now you must create a "Trustpoint". The Trustpoint is a marker to your Certificates on the Gateway. You must provide info about your site for the Certificate Signing Request.

```
Delta(config)#crypto ca trustpoint INDY
Delta(ca-trustpoint)#enrollment terminal pem
Delta(ca-trustpoint)#crl optional
Delta(ca-trustpoint)#subject-name C=US, ST=Indiana, L=Indianapolis,
O=InteractiveIntelligence, OU=Testing, CN=www.inin.com
Delta(ca-trustpoint)#fqdn www.inin.com
Delta(ca-trustpoint)#rsakeypair ININ-Key
Delta(ca-trustpoint)#exit
```

3. Now we are ready to Generate the Certificate Signing Request

```
Delta(config)#crypto ca enroll INDY
% Start certificate enrollment ..

% The subject name in the certificate will include: C=US, ST=Indiana,
L=Indianapolis, O=InteractiveIntelligence, OU=Testing, CN=www.inin.com
% The subject name in the certificate will include: www.inin.com
% Include the router serial number in the subject name? [yes/no]: no
% Include an IP address in the subject name? [no]: no
Display Certificate Request to terminal? [yes/no]: yes
```

Certificate Request follows:

```
-----BEGIN CERTIFICATE REQUEST-----
MIICADCCAWkCAQAwZ4xFTATBgNVBAMTDHd3dy5pbmluLmNvbTEQMA4GA1UECzMH
VGVzdGluZzEgMB4GA1UEChMXSW50ZXJhY3RpdmVJbnRlbGxpZ2VuY2UxFTATBgNV
BACtDEluZGhbmFwb2xpczEQMA4GA1UECBMHSW5kaWFuYTELMAkGA1UEBhMVCVVMx
GzAZBgkqhkiG9w0BCQIWDHd3dy5pbmluLmNvbTCBnzANBgkqhkiG9w0BAQEFAAOB
jQAwYkCgYEAspy6AK2baQErA/sBW9KMBY21GeTpw0JzbPzRqKq5ynUzeK2BuPqn
nw/HTd/c9em8Ck+vg4KePqR9sJNHVJTuwIZVPlW5PSnZp84wrqd5wZAm2DL4k4XT
1aYkwSkC+QvCUNrjRGCBA1c1G0jpfmFEMLH1zKLVtsqKXwjh6TZirsMCAwEAAAh
MB8GCSqGSIb3DQEJdJESMBAwDgYDVDR0PAQH/BAQDAgWgMA0GCSqGSIb3DQEBAUA
A4GBAHimjLwfOYrz+GEUXd02pzPtlyCwWh2vT4bQBbuUdz4Y0AsLYc7ZP+4lWBR6Y
I3zRMOrcnkthCSi/oahNiIvJ6S6XhXjwlt6wH+ReA0mJIKFZRdVchOPbnE7xOEs1
NoJcRDDgAg+50tDAFxl0Dee27/NvRh87px6s6Ku43UyJ7M99
-----END CERTIFICATE REQUEST-----
```

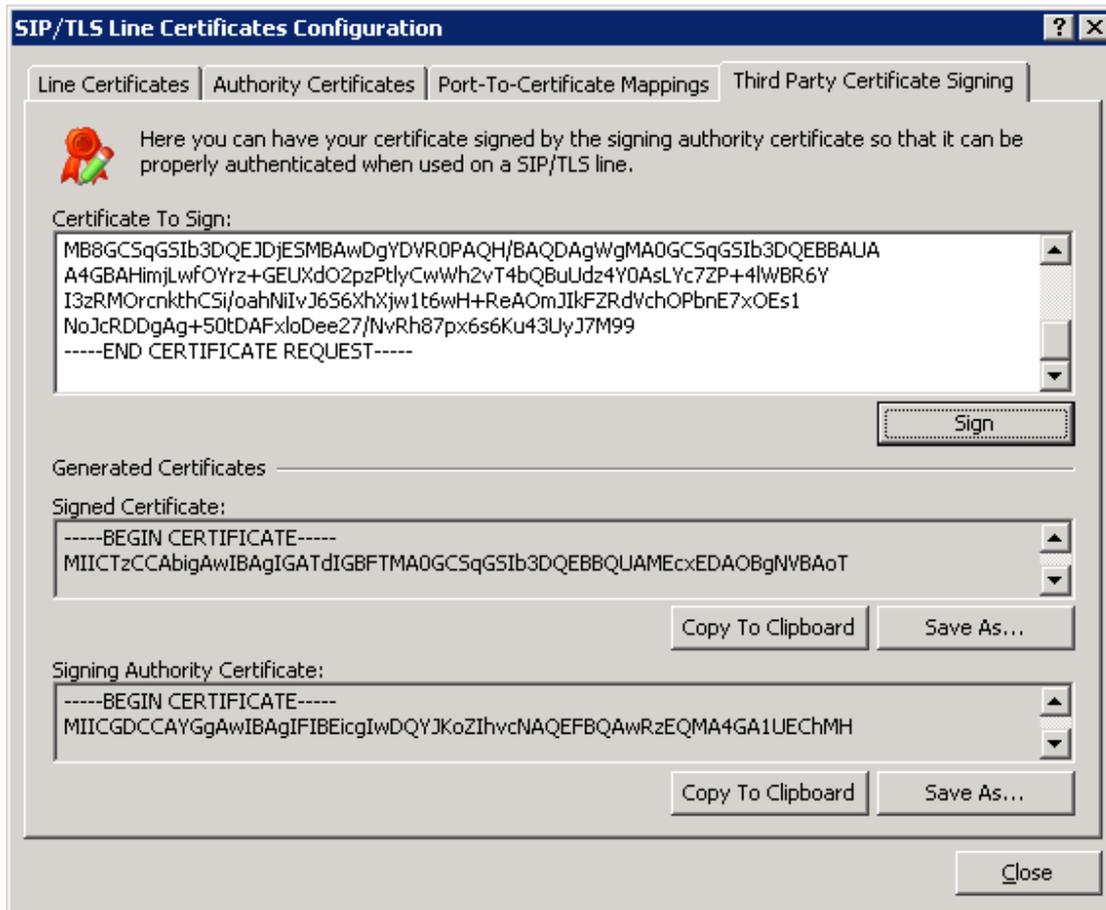

---End - This line not part of the certificate request---

```
Redisplay enrollment request? [yes/no]:no
Delta(config)#
```

## SRTP with Cisco Gateways

- Now we can take this to Interaction Administrator to be signed.  
You must Copy and Paste all of the ----BEGIN CERTIFICATE REQUEST down to -----END CERTIFICATE REQUEST-----  
This is found under System Configuration – Certificate Management – SIP/TLS Line Cert Config - Modify...

You will want to save the Top Certificate as "CiscoRouterSignedCertificate" and the bottom Certificate as "CiscoRouteri3AuthorityCertificate". **Be sure to save these to a safe and secure location.**

## SRTP with Cisco Gateways

---

```
% Router Certificate successfully imported
```

7. If this is the only Certificate that this Router will be using, it would be wise to make the Trustpoint the Default whenever crypto signaling is required. You can do this with the following commands in the SIP-UA.

```
Delta(config)#sip-ua  
Delta(config-sip-ua)#crypto signaling default trustpoint INDY
```

## SRTP with Cisco Gateways

---

### Dial-peer Configuration

Now we must make changes to the dial peers so they use TLS/SRTP. The example below creates a default IP and POTS peer for simplification in the troubleshooting process, but many other layouts and options are available. Some examples are shown below:

This peer is a catch all inbound pots peer

```
Delta(config)#dial-peer voice 9 pots
Delta(config-dial-peer)#service session
Delta(config-dial-peer)#incoming called-number .T
Delta(config-dial-peer)#direct-inward-dial
```

This peer will be matched on an outbound pots call

```
Delta(config)#dial-peer voice 99 pots
Delta(config-dial-peer)#service session
Delta(config-dial-peer)#destination-pattern .T
Delta(config-dial-peer)#direct-inward-dial
Delta(config-dial-peer)#port 1/0/0:23
```

An inbound voip TSL/SRTP peer

```
Delta(config)#dial-peer voice 301 voip
Delta(config-dial-peer)#voice-class sip url sips
Delta(config-dial-peer)#session protocol sipv2
Delta(config-dial-peer)#session transport tcp tls
Delta(config-dial-peer)#incoming called-number .
Delta(config-dial-peer)#dtmf-relay rtp-nte
Delta(config-dial-peer)#codec g711ulaw
Delta(config-dial-peer)#no vad
```

This peer will be matched on an outbound voip call

```
Delta(config)#dial-peer voice 305 voip
Delta(config-dial-peer)#preference 1
Delta(config-dial-peer)#destination-pattern 560....
Delta(config-dial-peer)#voice-class sip url sips
Delta(config-dial-peer)#session protocol sipv2
Delta(config-dial-peer)#session target ipv4:10.70.0.123
Delta(config-dial-peer)#dtmf-relay rtp-nte
Delta(config-dial-peer)#codec g711ulaw
Delta(config-dial-peer)#no vad
```

## SRTP with Cisco Gateways

### Interaction Center Configuration

Create your line. Notice that the Phone number is preceded by sips: this is a requirement for the Cisco Gateway. The from address must contain sips: for the gateway to treat the incoming call as a secure connection. Without this the call will be rejected. In SU4 and greater the Phone Number field will need to be created like the following example.

Example: sips:5151111@10.70.0.50:5061

Line Configuration - Cisco

SIP Line Configuration | Call Putback | Custom Attributes | History

Line

- Audio
- Transport
- Session
- Authentication
- Proxy
- Registrar
- Access
- Region
- TLS Security

Active

Phone Number:

Domain Name:

Maximum Number of Calls

Combined  Inbound/Outbound

Inbound:   No Limit

Outbound:   No Limit

Disable T.38 Faxing

Auto Disconnect when Silence Detected in

Confirm auto-save

OK Cancel Apply

## SRTP with Cisco Gateways

Be sure to set the Transport to TLS and the Audio Protocol to STRP

The screenshot shows the 'Line Configuration - Cisco' dialog box with the 'SIP Line Configuration' tab selected. The 'Transport' option is highlighted in the left-hand menu. The configuration settings are as follows:

Transport Protocol:	TLS
Audio Protocol:	SRTP
Security:	End-to-Edge
Address to use:	Local Area Connection
HP NC7782 Gigabit Server Adapter	
Receive Port:	5061
Connect Timer (ms):	3500
Maximum Packet Retry:	10
T1 Timer (ms):	500
Maximum Invite Retry:	6
T2 Timer (ms):	4000
Reinvite Delay (ms):	750
Retryable Reason Codes:	480, 500-599

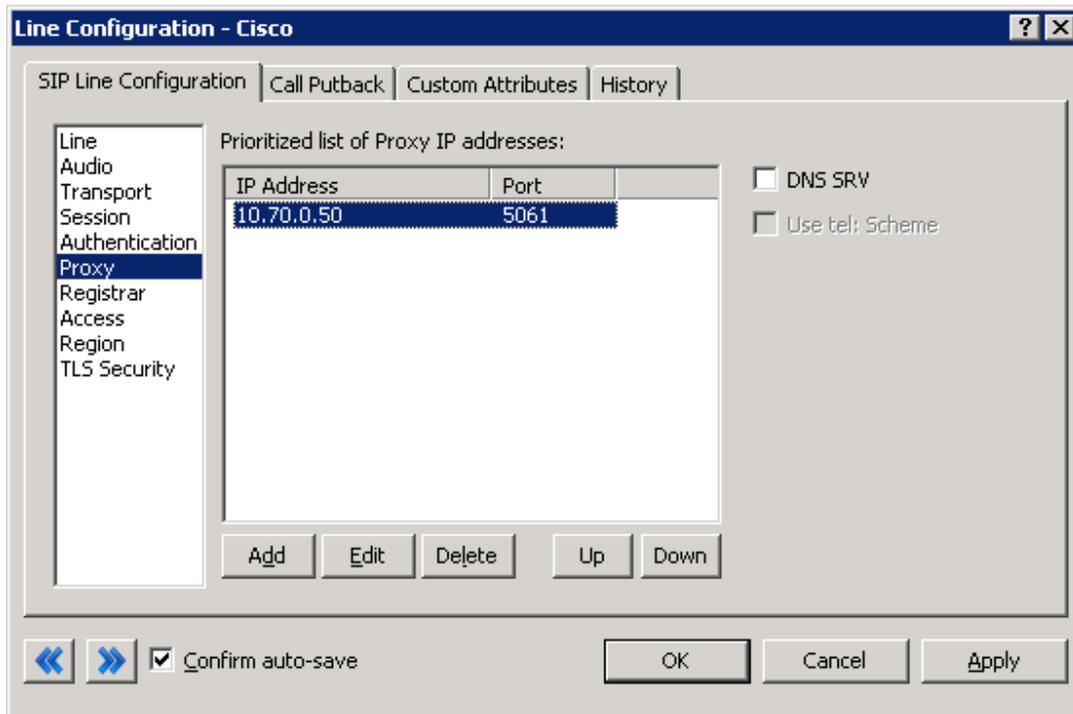

At the bottom of the dialog, there are navigation arrows, a checked 'Confirm auto-save' checkbox, and 'OK', 'Cancel', and 'Apply' buttons.

## SRTP with Cisco Gateways

---

Set the Proxy on the line to point to your Cisco Gateway with port 5061

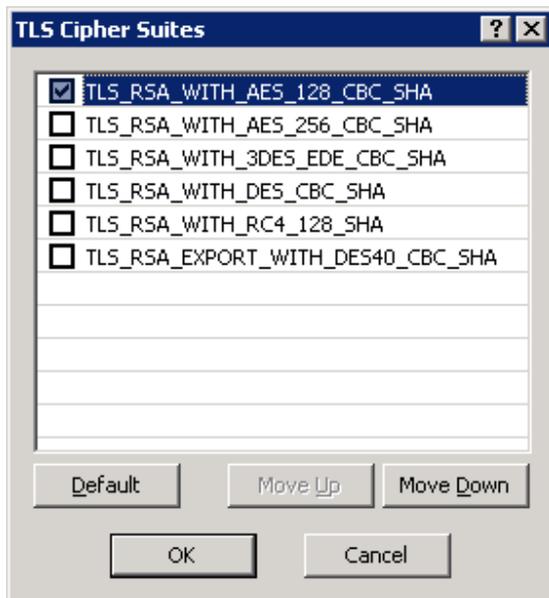

## SRTP with Cisco Gateways

---

The TLS Cipher Suite supported by Cisco is TLS\_RSA\_WITH\_AES\_128\_CBC\_SHA. Not setting this correctly will result in a “SIP – Remote System not responding” when an outbound call is placed. This can be found under the SIP Line Configuration – TLS Security.

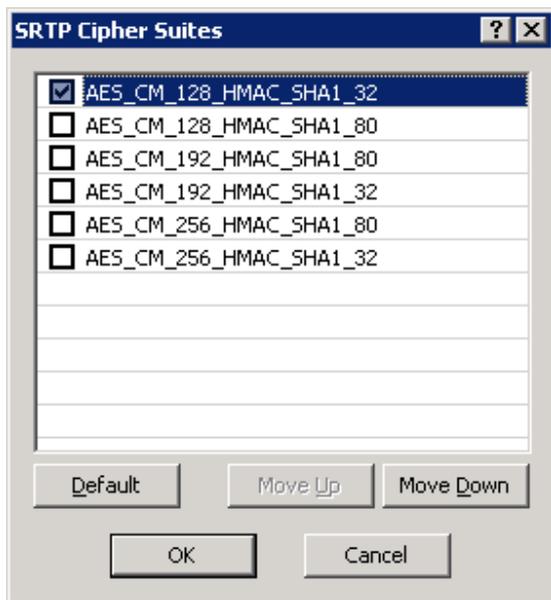

## SRTP with Cisco Gateways

---

The default SRTP Cipher Suite needs to be changed to AES\_CM\_128\_HMAC\_SHA1\_32, because this is what the Cisco Gateway supports. Not setting this correctly will result in a “488 not supported Media” returned from the Cisco Gateway. This can be found at Regionalization – Locations – Communications - Modify – SRTP Cipher Suites - Modify...

## S RTP with Cisco Gateways

The dial plan must now be modified to format the dial string for easy dialing from the phone or the client.

**Regional Dial Plan - Edit Pattern**

Input Pattern:  -> Standardized Number:  {}

Location Filter:  Default Dial String:  {}

List Name:  Display String:  {}

Classification:  Edit Base:  {}

Account Code Verification

Buttons: Add Group, Edit, Remove, Up, Down, <<, >>, OK, Cancel, Help

**Dial Group - Edit Entry**

The following Dial Line Groups are being modified.

Dial Group	Private Line Assignment
CISCO	

Input Pattern:

Location Filter:

Classification:

Dial String:  {}

Buttons: OK, Cancel, Help

## SRTP with Cisco Gateways

---

### Redundancy

Here is an example on using two dial-peers for inbound calls to Interaction Center. When Interaction Center is using a switchover pair, this allows the Gateway to send the calls to the active server.

```
Delta(config)#dial-peer voice 305 voip
Delta(config-dial-peer)#preference 1
Delta(config-dial-peer)#destination-pattern 560....
Delta(config-dial-peer)#voice-class sip url sips
Delta(config-dial-peer)#session protocol sipv2
Delta(config-dial-peer)#session target ipv4:10.70.0.123
Delta(config-dial-peer)#dtmf-relay rtp-nte
Delta(config-dial-peer)#codec g711ulaw
Delta(config-dial-peer)#no vad
```

```
Delta(config)#dial-peer voice 306 voip
Delta(config-dial-peer)#preference 2
Delta(config-dial-peer)#destination-pattern 560....
Delta(config-dial-peer)#voice-class sip url sips
Delta(config-dial-peer)#session protocol sipv2
Delta(config-dial-peer)#session target ipv4:10.70.0.122
Delta(config-dial-peer)#dtmf-relay rtp-nte
Delta(config-dial-peer)#codec g711ulaw
Delta(config-dial-peer)#no vad
```

Since the Server Certificates that are used during switchover are the same, there is nothing that needs to be done for outbound calls from Interaction Center.

## SRTP with Cisco Gateways

---

### Functional Tests

#### Inbound and Outbound with Cisco 2811 and xIC 3.0 SU1

- Test scenario:
1. Place an outbound call through the gateway and verify audio
    - a. Place this call on hold and then off hold and verify audio
    - b. Record a section of the call
    - c. Transfer the call to another station configured with TLS/SRTP and verify audio
  2. Place outbound call and transfer to a station configured with TLS/RTP and verify audio
  3. Repeat step 1 but with an inbound call

In our test environment the outbound calls were placed to analog phones off of a channel bank, which was connected to the gateway via a PSTN connection.

### Specific Test Cases

Test Case	Title
5163	TLS/sRTP Gateway Configuration
5572	Gateway SIP Security – Hold
5573	Gateway SIP Security - Inbound Call
5574	Gateway SIP Security - Outbound Call
5576	Gateway SIP Security – Conference
5577	Gateway SIP Security - Transfer (Blind)
5578	Gateway SIP Security - Transfer (Consult)
5579	Gateway SIP Security – Recording
5580	Gateway SIP Security - G.711 and G.729 With SRTP

## SRTP with Cisco Gateways

---

### Faxing Support

Note that *only the initial tones* would be secure before the gateway flips to T.38.

To allow faxing with xIC the T.38 protocol must be enabled within the gateway. This can be done either at the global level or within a dial-peer.

### Global Configuration

```
Delta(config)#voice service voip
Delta(conf-voi-serv)#fax protocol t38
```

### Dial-peer Configuration

An inbound fax peer

```
Delta(config)#dial-peer voice 301 voip
Delta(config-dial-peer)#fax protocol t38
```

This peer will be matched on an outbound fax

```
Delta(config)#dial-peer voice 305 voip
Delta(config-dial-peer)#fax protocol t38
```

## SRTP with Cisco Gateways

---

### Functional Tests

To test faxing functionality simply try to send and receive faxes by using Interaction Fax.

200 faxes were sent at a rate of 1 fax every 35 seconds between two separate servers. This resulted in 200 inbound faxes and 200 outbound faxes with 95% accuracy.

### Specific Test Cases

Test Case	Title
4417	SIP - T.38 Inbound/G.711
4418	SIP - T.38 Outbound/G.711
4419	SIP - T.38 Inbound/G.729
4420	SIP - T.38 Outbound/G.729

## SRTP with Cisco Gateways

---

### Troubleshooting

The documentation that could be found on [www.cisco.com](http://www.cisco.com) for TLS SRTP configuration was outdated and the commands were no longer in the IOS in the locations indicated. Becoming familiar with the following debug statements will be invaluable for determining when things are failing.

```
Delta#debug ccsip all
Delta#debug voice ccapi inout
```

Working calls are extremely valuable, so this will show 1 for each direction.

#### A working inbound call (PSTN to SIP):

```
