# 1-5 Using Formulas in Geometry

## Warm Up

Evaluate. Round to the nearest hundredth.

1.  $12^2$  144

2.  $7.6^2$  57.76

3.  $\sqrt{64}$  8

4.  $\sqrt{54}$  7.35

5.  $3^2(\pi)$  28.27

6.  $(3\pi)^2$  88.83

# 1-5 Using Formulas in Geometry

## *Objective*

Apply formulas for perimeter, area, and circumference.

# 1-5 Using Formulas in Geometry

## *Vocabulary*

perimeter

diameter

area

radius

base

circumference

height

pi

## 1-5 Using Formulas in Geometry

The **perimeter**  $P$  of a plane figure is the sum of the side lengths of the figure.

The **area**  $A$  of a plane figure is the number of non-overlapping square units of a given size that exactly cover the figure.

# 1-5 Using Formulas in Geometry

## Perimeter and Area

### RECTANGLE

$$P = 2l + 2w \text{ or } 2(l + w)$$
$$A = lw$$

### SQUARE

$$P = 4s$$
$$A = s^2$$

### TRIANGLE

$$P = a + b + c$$
$$A = \frac{1}{2}bh \text{ or } \frac{bh}{2}$$

## 1-5 Using Formulas in Geometry

The **base**  $b$  can be any side of a triangle. The **height**  $h$  is a segment from a vertex that forms a right angle with a line containing the base. The height may be a side of the triangle or in the interior or the exterior of the triangle.

# 1-5 Using Formulas in Geometry

## Remember!

Perimeter is expressed in linear units, such as inches (in.) or meters (m). Area is expressed in square units, such as square centimeters ( $\text{cm}^2$ ).

# 1-5 Using Formulas in Geometry

## Example 1A: Finding Perimeter and Area

Find the perimeter and area of each figure.

$$\begin{aligned}P &= 2\ell + 2w \\ &= 2(6) + 2(4) \\ &= 12 + 8 = 20 \text{ in.}\end{aligned}$$

$$\begin{aligned}A &= \ell w \\ &= (6)(4) = 24 \text{ in}^2\end{aligned}$$

# 1-5 Using Formulas in Geometry

## Example 1B: Finding Perimeter and Area

Find the perimeter and area of each figure.

$$\begin{aligned}P &= a + b + c \\&= (x + 4) + 6 + 5x \\&= 6x + 10\end{aligned}$$

$$\begin{aligned}A &= \frac{1}{2}bh \\&= \frac{1}{2}(6)(x + 4) \\&= 3x + 12\end{aligned}$$

# 1-5 Using Formulas in Geometry

## Check It Out! Example 1

Find the perimeter and area of a square with  $s = 3.5$  in.

$$P = 4s$$

$$A = s^2$$

$$P = 4(3.5)$$

$$A = (3.5)^2$$

$$P = 14 \text{ in.}$$

$$A = 12.25 \text{ in}^2$$

# 1-5 Using Formulas in Geometry

## Example 2: Crafts Application

The Queens Quilt block includes 12 blue triangles. The base and height of each triangle are about 4 in. Find the approximate amount of fabric used to make the 12 triangles.

The area of one triangle is

$$A = \frac{1}{2}bh = \frac{1}{2}(4)(4) = 8 \text{ in}^2.$$

The total area of the 12 triangles is  $12(8) = 96 \text{ in}^2$ .

# 1-5 Using Formulas in Geometry

## Check It Out! Example 2

Find the amount of fabric used to make four rectangles. Each rectangle has a length of  $6\frac{1}{2}$  in. and a width of  $2\frac{1}{2}$  in.

The area of one triangle is

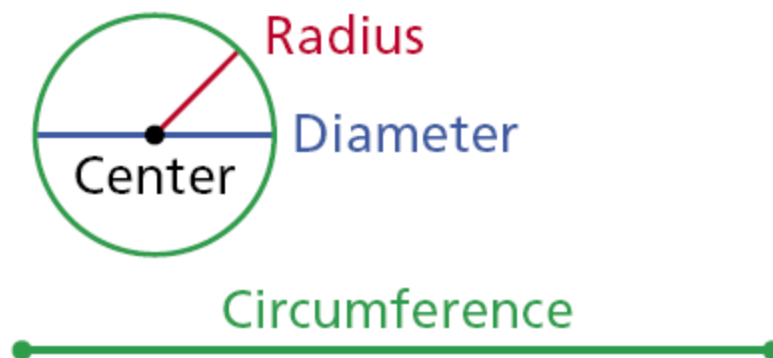

$$A = \ell w = \left(6\frac{1}{2}\right)\left(2\frac{1}{2}\right) = 16\frac{1}{4} \text{ in}^2.$$

The amount of fabric to make four rectangles is

$$4\left(16\frac{1}{4}\right) = 65 \text{ in}^2.$$

## 1-5 Using Formulas in Geometry

In a circle a **diameter** is a segment that passes through the center of the circle and whose endpoints are on a circle. A **radius** of a circle is a segment whose endpoints are the center of the circle and a point on the circle. The **circumference** of a circle is the distance around the circle.

# 1-5 Using Formulas in Geometry

## Circumference and Area of a Circle

The circumference  $C$  of a circle is given by the formula  $C = \pi d$  or  $C = 2\pi r$ .

The area  $A$  of a circle is given by the formula  $A = \pi r^2$ .

The ratio of a circle's circumference to its diameter is the same for all circles. This ratio is represented by the Greek letter  $\pi$  (pi). The value of  $\pi$  is irrational. Pi is often approximated as 3.14 or  $\frac{22}{7}$ .

# 1-5 Using Formulas in Geometry

## Example 3: Finding the Circumference and Area of a Circle

Find the circumference and area of a circle with radius 8 cm. Use the  $\pi$  key on your calculator. Then round the answer to the nearest tenth.

$$\begin{aligned}C &= 2\pi r \\ &= 2\pi (8) = 16\pi \\ &\approx 50.3 \text{ cm}\end{aligned}$$

$$\begin{aligned}A &= \pi r^2 \\ &= \pi (8)^2 = 64\pi \\ &\approx 201.1 \text{ cm}^2\end{aligned}$$

# 1-5 Using Formulas in Geometry

## Check It Out! Example 3

Find the circumference and area of a circle with radius 14m.

$$\begin{aligned}C &= 2\pi r \\ &= 2\pi (14) = 28\pi \\ &\approx 88.0 \text{ m}\end{aligned}$$

$$\begin{aligned}A &= \pi r^2 \\ &= \pi (14)^2 = 196\pi \\ &\approx 615.8 \text{ m}^2\end{aligned}$$

# 1-5 Using Formulas in Geometry

## Lesson Quiz: Part I

Find the area and perimeter of each figure.

# 1-5 Using Formulas in Geometry

## Lesson Quiz: Part II

**Find the circumference and area of each circle. Leave answers in terms of  $\pi$ .**

**4.** radius 2 cm  $4\pi^2$  cm;  $4\pi$  cm<sup>2</sup>

**5.** diameter 12 ft  $36\pi^2$  ft;  $12\pi$  ft<sup>2</sup>

**6.** The area of a rectangle is 74.82 in<sup>2</sup>, and the length is 12.9 in. Find the width.

**5.8 in**
