# UV/EB CURABLE RESINS INDUSTRIAL COATINGS

### About allnex

## Facts & Figures

- Global company with €2.2 bn in sales
- Broad Technology portfolio: liquid coating resins, energy curable resins, powder coating resins, crosslinkers and additives, composites and construction materials

  • Approximately 4000 employees

  • Customers in more than 100 countries

- 33 manufacturing facilities
- 23 research and technology centers
- 6 joint ventures
- Extensive range of solutions for key coating segments: automotive, industrial, packaging coating and inks, protective, industrial plastics and specialty architectural

With manufacturing, R&D and technical facilities located throughout Europe, North America, Asia Pacific and Latin America, allnex offers global and reliable supply of resins and additives combined with local, responsive customer support.

### Introduction

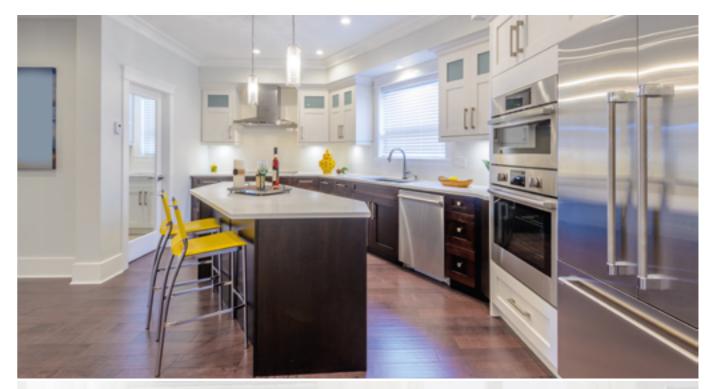

#### UV/EB Curable Resins (Radcure)

Ultraviolet (UV) and electron beam (EB) energy-cured coatings have excellent appearance, durability, and little or no VOC emissions, while enabling increased productivity and lower overall costs per cured part. allnex is the pioneer in UV resin / Radcure technology and applications development. We are the world's leading producer of energy-curable resins for the industrial and plastic coatings as well as the packaging coatings and inks applications, driving market growth and end-user acceptance of this unique technology.

Our customers have come to rely on our broad range of innovative EBECRYL® and UCECOAT® resins including:

- 100% solids UV curable resins and oligomers
- Waterborne UV curable resins
- UV curable resins derived from renewable raw materials
- Low Extractables and Odor (LEO) resins specifically formulated for use in low odor, low migration inks and coatings applied to food and pharmaceutical packaging
- A wide range of urethane acrylates, polyester acrylates, amino acrylates and epoxy acrylates
- Specially-designed photo initiators and additives that enhance the performance of energy-cured coatings.

### **Product Families**

#### Diluting acrylates

As RADCURE™ formulations are normally solvent-free, diluting acrylates can be added to reduce the viscosity for better processing and to improve crosslinking. Reactivity, mechanical and chemical resistance and shrinkage increase with increasing functionality of the diluting acrylate, while the flexibility and adhesion decrease.

#### Polyester acrylates

Polyester acrylates cover a wide range of viscosities (low to high) and cure speeds and show a moderate to high shrinkage.

#### **Epoxy acrylates**

Epoxy acrylates are typically characterized by very fast cure, good hardness and excellent chemical resistance. In general they tend to be low in flexibility, with little elongation but they provide high gloss to the coating. A few exceptions show a good compromise flexibility/reactivity.

#### Acrylic acrylates

Acrylic acrylates provide a good adhesion to various substrates with a moderate cure speed and moderate to good flexibility. They are characterized by a low shrinkage and can give coatings excellent weatherability.

#### RAYLOK® performance products

RAYLOK performance products is an original line of high performance systems specifically designed by allnex to achieve superior results for dedicated applications.

#### Radiation curable additives

allnex reactive additives were specifically developed for radiation curing applications to improve specific properties (adhesion, wetting, slip) while they become part of the network after curing.

#### **Urethane acrylates**

Urethane acrylates from allnex are the most versatile products able to provide a wide range of performance characteristics. Depending on the specific product

chemistry, virtually any performance level can be achieved in terms of softness/hardness, flexibility, non-yellowing, cure speeds selecting products in a wide range of viscosities. Aliphatic urethane acrylates are, in comparison to aromatic urethane acrylates, known for their non-yellowing and outdoor performances.

#### Waterbased and water-compatible resins

Reasons for the success of UV waterborne radiation curing technology include outstanding performance of the coatings, very fast curing, low process costs per square metre of surface, and environmental compliance. The very low viscosity of the UCECOAT® range enables their application by different coating techniques (roller, spray, curtain and vacuum coating) and together with a low-solids content, allows a nice open-pore finish applied by spraying.

#### Cationic UV curable resins

Cationic UV cure technology is used to produce solvent-free, lacquers, inks, coatings and adhesives, offering unique film properties. Typical applications for cationic UV cure technology are metal, adhesives and coatings onto difficult plastic substrates. As the ionic polymerization reaction continues during the post curing process (also called dark cure effect) pratically all of the reactive species are incorporated into the final polymer matrix.

#### **Dual Cure Resins**

Dual cure resins offer unique properties as adhesion promotion on difficult substrates and curing in non-irradiated areas. allnex provides a full range of dual cure resins, including isocyanate bearing urethane acrylates as well as their hydroxy bearing combination partners.

#### Amine Modified Polyether Acrylates, Amine Synergists

Amine modified polyether acrylates are known for their low viscosity and good reactivity. Reactive amine synergists promote fast UV cure with less residual odour, particularly when combined with polymeric photoinitiators.

#### Definitions

Acid value Color

Expressed in mg per KOH per g

Maximum values in:

- Gardner scale when no units are specified range from light yellow to red defined by the chromaticities of glass standards numbered from 1 for the lightest to 18 for the darkest
- Pt/Co or APHA-Hazen (A) scale defined by specified dilutions of a platinum-cobalt stock solution, ranging from 1 at the light end of the scale to 500 at the darkest
- lodine scale defined by specified dilutions of an iodine solution, ranging from 1 for the lightest colour to 500 for the darkest

Density Expressed in g/cm<sup>3</sup>

Dilution Parts of diluent in 100 parts of product

Functionality Theoretical value, expressed as number of double bonds per molecule

Film form. temp. Expressed in °C

Theoretical molecular weight

Measured by gravimetry and expressed as the percentage of solid residue remaining

after complete drying of the waterborne dispersion for 2 hours at 120°C

Particle size Expressed in nm

H Measured using a conventional glass electrode equipment

Viscosity in milliPascal-seconds (mPa·s) at the specified temperature.

Note: mPa·s = centiPoise (cP)

### Polyesters in diluting monomers

Products	Description	Dilution	Viscosity mPa·s, 25°C	Color	Molecular Weight (Mn)	Acid Value	Density	Market Segment (W, P, M, R)	Properties	Reactivity	Hardness	Flexibility	Chemical resistance	Adhesion
Unsaturated polyest	ters in diluting monomers													
EBECRYL®* 4175	Polyester resin	25 DPGDA	15000	2,0 (lodine)	2300	<20	1,20	W	Hard, high gloss. For clear and pigmented primers and topcoats; good sandability, adhesion and intercoat adhesion; improves scratch resistance of UV topcoats.	••	•••	•	•••	•••
EBECRYL 4381	Polyester resin	30 DPGDA	10000	3,0 (lodine)	2200	<14	1,19	W	Hard, reactive. For clear and pigmented primers and topcoats; improved in reactivity, good adhesion and sandability.	••	••	••	•••	•••
Saturated polyesters	s in diluting monomers													
EBECRYL 524	Polyester resin	30 HDDA	60000	250A	1000		1,22	Р	Used as adhesion primer and binder on difficult substrates.	•	•••	•••	•	•••
EBECRYL 525	Polyester resin	40 TPGDA	40000	200A	1000	25	1,21	Р	Used as adhesion primer and binder on difficult substrates.	•	••	•••	•	•••

### Epoxy acrylates

Products	Description	Dilution	Viscosity mPa·s, 25°C	Viscosity mPa·s, 60°C	Color	Density	Acid value	Functionality	Market Segment (W, P, M, R)	Key Features	Reactivity	Hardness	Flexibility	Chemical resistance	Adhesion
Epoxy acrylates															
EBECRYL®* 600	Epoxy acrylate			3000	2	1,13		2	W, P, M, R	Good boiling water resistance.	•••	••••	•	•••	•
EBECRYL 600/30DP	Epoxy acrylate	30 DPGDA	3900		1	1,13	2	2	W, P, M, R	General purpose epoxy resin.	••	••	• •	• •	•••
EBECRYL 600/35OT	Epoxy acrylate	35 OTA 480	11500		2	1,15		2	W, P, M, R	Good pigment wetting.	•••	•••	•	•••	••
EBECRYL 604	Epoxy acrylate	20 HDDA	8500		2	1,13	2	2	W, P, M, R	Outstanding water resistance.	• •	••	•	•••	•••
EBECRYL 605	Epoxy acrylate	25 TPGDA	7500		2	1,17	2	2	W, P, M, R	General purpose – epoxy resin.	• •	••	• •	• •	••
EBECRYL 605/20	Epoxy acrylate	20 TPGDA	18000		2	1,17		2	W, P, M, R	General purpose – epoxy resin.	• •	••	• •	• •	••
EBECRYL 605/40	Epoxy acrylate	40 TPGDA	1650		2	1,11		2	W, P, M, R	General purpose – epoxy resin.	••	••	• •	• •	••
EBECRYL 609	Epoxy acrylate	25 BuAc	3250		2	0,99	2	2	W, P, M, R	Resin for solvent based applications.	•••	••••	•	••••	••
EBECRYL 648	Epoxy acrylate	25 OTA 480	47500		3	1,14	2	2	W, P, M, R	Excellent pigment wetting.	•••	•••	•	•••	••
EBECRYL 1608	Epoxy acrylate	16 OTA 480		1000	2	1,17	2	2	W, P, M, R	Deodorized product for printing inks.	•••	•••	•	•••	••
EBECRYL 3105	Epoxy acrylate			600	5	1,18	5	2	W, P, M, R	Excellent adhesion.	•	••	••••	• •	••••
EBECRYL 3300	Epoxy acrylate	35 DPGDA	1100		7	1,14	3	2	W, P, M, R	Outstanding adhesion to metal, good compromise hardness/flexibility and excellent corrosion resistance.	••••	•••	••	••	•••
EBECRYL 3416	Modified epoxy acrylate	35 TPGDA	18000		3	1,12	15	4	W, P, M, R	Reactivity, hardness and corrosion resistance.	••••	•••	•	••••	••
EBECRYL 3639	Modified epoxy acrylate	30 DPGDA	16500		3	1,15	2	2	W, P, M, R	High flexibility - high reactivity.	••••	•••	••••	•••	•••
EBECRYL 3700/30TP	Epoxy acrylate	30 TPGDA	5700		3	1,17	3	2	W, P, M, R	General pupose epoxy resin - improved adhesion when adding isocyanates.	••	••	••	••	••
EBECRYL 3701	Epoxy acrylate			7000	3	1,14	6	2	W, P, M, R	Enhanced adhesion to plastics.	••	••	••••	• •	••••
EBECRYL 3703	Epoxy acrylate			4250	6	1,14	5	2	W, P, M, R	Enhanced adhesion to plastics. Fast UV cure response.	••••	••••	••••	•••	••••
EBECRYL 3708	Epoxy acrylate			3500	4	1,17	4	2	W, P, M, R	High flexibility, elongation and impact resistance.	•	•••	••••	•••	••••
EBECRYL 3740/TP20	Epoxy acrylate	20 TPGDA		600	2	1,16		2	W, P, M, R	Good pigment wetting.	• •	••	••	• •	••
EBECRYL 5848	Epoxidized soya bean oil acrylate		2500		8	1,03	15	3	W, P, M, R	Good pigment wetting - high renewable content.	•	•	•••	•	•
EBECRYL 6040	Epoxy acrylate	25 OTA 480	25000		2	1,14	2	2	W, P, M, R	General purpose.	•••	•••	•	•••	• •

### Waterbased and water-compatible resins

Products	Description	Solid content	Viscosity mPa·s, 25°C	рН	Max. average particle Size	Molecular Weight (Mn)	Tack-free before cure	Market Segment (W, P, M, R)	Key Features
Waterbased resins									
UCECOAT®* 2501	Aliphatic polyurethane acrylate dispersion	40	<200	7.0-8.5	<125	20.000	Υ	W,P,R	Versatile resin, good adhesion, excellent compatibility with WB acrylic resins.
UCECOAT 6558	Aliphatic urethane acrylate solution in water	50	3400		NA	2000	N	W	Especially recommended as wood primer. High wood wetting, adhesion and flexibility. Resoluble in water before UV cure.
UCECOAT 6569	Aliphatic urethane acrylate solution in water	95	8000 (60°C)		NA	2000	N	W	High wood wetting, adhesion and flexibility. Resoluble in water before UV cure.
UCECOAT 7156	Aliphatic polyurethane acrylate dispersion	50	3300 (23°C)	6,4-7,8	<150	5500	N	W	High solid content dispersion with high wood wetting, adhesion, chemical resistance, flexibility and hardness, low yellowing. Resoluble in water before UV cure.
UCECOAT 7177	Aliphatic polyurethane acrylate dispersion	40	<200	6,4 - 7,8	<150	5500	N	W	High wood wetting, adhesion, chemical resistance, flexibility and hardness, low yellowing. Resoluble in water before UV cure.
UCECOAT 7200	Aliphatic urethane acrylate emulsion	65	<700	3-5	500	1000	N	Р	High solid content, high scratch, abrasion and chemical resistance, recommended for hardcoat application on plastics.
UCECOAT 7210	Aliphatic urethane acrylate emulsion	65	<1000	2-5	<1000		N	Р	High solid content, recommended as blending partner for UCECOAT® 7200 to adjust flexibility in hardcoat application on plastics.
UCECOAT 7571	Aliphatic polyurethane acrylate dispersion	35	<200	7 - 8,5	<100	10000	Υ	W	Recommended for coatings on wood. High stain resistance, good flexibility and hardness. Tack-free after water evaporation.
UCECOAT 7655	Aliphatic polyurethane acrylate dispersion	35	<200	7 - 8,5	<150	10000	Υ	W, P, R	High stain resistance, scratch and reactivity in white pigmented and clearcoat systems.
UCECOAT 7674	Aliphatic polyurethane acrylate dispersion	40	<200	6,4 - 7,8	<150	5500	N	W	High adhesion and wetting on wood. Resoluble in water before UV cure.
UCECOAT 7689	Aliphatic polyurethane acrylate dispersion	35	<200	7 - 8,5	<100		Υ	W, P, R	Outdoor resistance, good flexibility and chemical resistance.
UCECOAT 7700	Aliphatic polyurethane acrylate dispersion	35	<200	7,0 - 8,5	<150		Υ	W, P	Very high hardness and scratch resistance (nail, pencil, coin), high stain and blocking resistances for high-end wooden furniture top coats, incl. pigmented systems.
UCECOAT 7717	Aliphatic polyurethane acrylate dispersion	40	<250	6 - 7,5	<150	5500	N	W	High "Anfeuerung" primer. High gloss.
UCECOAT 7734	Aliphatic polyurethane acrylate dispersion	38	<500	7 - 8,5	<150	10000	Υ	W, P, R	High stain resistance both in clear and white pigmented coatings.
UCECOAT 7770	Aliphatic polyurethane acrylate dispersion	35	<250	7 - 8,5	<150	10000	Υ	W, P, R	Recommended for PVC resilient flooring, good stain resistance and hardness.
UCECOAT 7773	Aliphatic polyurethane acrylate dispersion	39	<250	7 - 8,5	<150	10000	Υ	W, P, R	Recommended for PVC resilient flooring and topcoat on wood, high stain resistance and hardness.
UCECOAT 7788	Aliphatic polyurethane acrylate dispersion	40	<500	7 - 8,5	<150	20000	Υ	W, R	Versatile resin with good stability and good balance of coating properties, wide compatibility with various resins and additives.
UCECOAT 7849	Aliphatic polyurethane acrylate dispersion	35	<200	7,5	<100	10000	Υ	W, R	Versatile resin, recommended for resilient flooring and coatings on wood, good stain resistance.
UCECOAT 7856	Aliphatic polyurethane acrylate dispersion	45	<500	6 - 7	<150		N	W	For high gloss and mirror image coatings on wood.
UCECOAT 7892	Aliphatic polyurethane acrylate dispersion	32	10-22s (DIN 4, 20°C)	6 - 8,5	<150		Υ	W, R	Allows the development of high/low gloss formulations. Good balance of flexibility and hardness, high stain and chemical resistance. Contains a dye indicator to provide visible evidence that the floor coating is properly cured.

### RAYLOK® performance products

Products	Description	Viscosity mPa·s, 25°C	Viscosity mPa·s, 60°C	Color	Density	Molecular Weight (Mn)	Functionality	Market Segment (W, P, M, R)	Key features
RAYLOK®* 1622	Oil modified acrylate	520		7	0,98		3	W	Oil modified binder, UV-curing with 80W/cm lamps.
RAYLOK 1722	Phosphorus based acrylated oligomer		7100	2,5	1,10	3000	2	W	Halogen-free flame retardant oligomer, used in intermediate coats, superior clarity of the cured film.
RAYLOK 5021	Aromatic urethane acrylate		12500	2	1,14		2	Р	For electrical sleeves – excellent flexibility, electrical and thermal insulating properties.

<sup>\*</sup> RAYLOK UV curable performance products

### Diluting acrylates

									Perfo	ormance of M	laterial			Perform	nance in Prod	uct group	
Products	Description	Viscosity mPa·s, 25°C	Color	Density	Acid value	Market Segment (W, P, M, R)	Key Features	Reactivity	Hardness	Flexibility	Chemical resistance	Adhesion	Reactivity	Hardness	Flexibility	Chemical resistance	Adhesion
Monofunctional								Diluting acry	ylates (1)				Family (2)				
EBECRYL®* 110	Oxyethylated phenol acrylate	20	200A	1,12	1	Р	Low odor monoacrylate; good adhesion onto non-polar substrates.	•	••	•••	••	•••	••	••	•••	•••	•••
EBECRYL 113	Monofunctional epoxy acrylate	120	1	0,97		W,P	Low irritant, low odor.	•	••	••	••	•••	•••	•••	•••	•••	••
EBECRYL 114	Phenoxyethyl acrylate	10	200A	1,10	1	Р	Excellent adhesion to plastics and metal.	•	••	••••	••	••••	•••	••••	••••	•••	•••
IBOA	Isobornyl acrylate	9	100A	0,98	1	W,P	High Tg.	•••	•••	• •	•••	• •	•••	•••	• •	•••	• •
ODA	Octyl and Decyl Acrylate Mixture	3	1	0,87	1	W, P	Excellent flexibility, good adhesion to non-polar substrates, good water resistance.	•	••	•••	••	•••	•	••	•••	•••	••
Difunctional																	
EBECRYL 11	Polyethylene glycol 600 diacrylate	155	3	1,11		W	100% water soluble. Good Flexibility.	••	••	•••	••	•••	••	• •	•••	• •	•••
EBECRYL 130	Tricyclodecanediol diacrylate	160	2	1,01		Р	High reactive diluting oligomer characterised by high Tg and low shrinkage.	••	•••	••	•••	••••	••	•••	••	•••	•••
EBECRYL 145	Propoxylated neopentyl glycol diacrylate	20	1	1,01		Р	Aliphatic di-functional acrylate of low surface tension.	••	••	•••	••	•••	• •	• •	•••	•	•••
EBECRYL 150	Bisphenol A derivative diacrylate	1400	1	1,14	5	W,P	Low irritant, high reactive diluting acrylated resin.	••••	•••	••	•••	••	••••	•••	••	•••	••
DPGDA	Dipropylene glycol diacrylate	10	100A	1,06	0,4	W,P		••	••	••	••	•••	••	•••	•••	••	•••
HDDA	1,6-Hexanediol diacrylate	6	40A	1,03	0,4	W,P	High diluting power, good weathering properties.	••	••	••	•••	•••	• •	•••	••	•••	••••
TPGDA	Tripropylene glycol diacrylate	3	50A	1,05	0,4	W,P		••	••	••	••	•••	••	• •	•••	•	•••
Trifunctional																	
EBECRYL 160	Trimethylolpropane ethoxy triacrylate	70	60A	1,09	0,4	W,P,M,R	Good compromise of properties.	•••	•••	••	•••	••	•••	•••	•••	•••	•••
OTA 480	Acrylated glycerol derivative	90	60A	1,08	0,4	W,P,M,R	Good compromise of properties, good pigment wetting.	•••	•••	••	•••	••	• •	• •	•••	•••	•••
TMPTA	Trimethylolpropane triacrylate	115	50A	1,11	0,4	W	Good surface cure and scratch resistance.	•••	•••	•	•••	•	•••	•••	•	•••	•
Multifunctional																	
EBECRYL 40	Polyether tetraacrylate	160	1	1,15		W,P,M,R	Low shrinkage.	• •	• •	•••	•••	•••	• •	• •	•••	•••	•••
EBECRYL 50	Polyether tetraacrylate	200	1	1,15		W,P,M,R	Low shrinkage.	• •	••	•••	•••	•••	• •	••	•••	•••	•••
EBECRYL 140	Polyester acrylate	1000	400A	1,1	110	W,P	Good reactivity and hardness.	•••	•••	••	•••	••	•••	•••	• •	•••	• •
DPHA	Dipentaerythritol penta / hexaacrylate	16000	1	1,18	10	W	Very good scratch resistance.	••••	•••	•	•••	•	•••	•••	•	•••	•
PETIA	Mixture of pentaerythritol tri- and tetraacrylate	1100	200A	1,18	10	W	High degree of crosslinking.	••••	••••	•	••••	•	•••	••••	•	•••	•

### Radiation curable additives and Cationic UV curable resins

Products	Description	Dosage	Over-coatability	Leveling agent	Adhesion promoter	Key Features
Radiation curable addit	ives					
EBECRYL®* 168	Methacrylated acidic derivative.	1,0-5,0%			•	Good adhesion on wood and melaminated foil.
EBECRYL 170	Acrylated acidic derivative.	5,0-10,0%			•	Good adhesion to metal, glass, plastic and wood.
EBECRYL 171	Methacrylated acidic derivative.	1,0-5,0%			•	Good adhesion to metal, glass, plastic and wood.
EBECRYL 331	Radiation curable leveling & dispersing agent.	0,5-5%	Υ	Υ	N	High wetting power (to achieve high gloss and high colour strength), prevents settling of pigments/ entenders, good levelling properties, recommended specifically for use in metallic formulations (very good stabilization of aluminium flakes).
EBECRYL 350	Silicone diacrylate.	0,3-1,0%	No	•		Copolymerisable silicone derivative providing good substrate wetting and slip.
EBECRYL 1360	Silicone hexaacrylate.	0,3–1,0%	No	•		Copolymerisable silicone derivative providing good substrate wetting and slip, mainly recommended for EB-curing.

Products	Description	Туре	State	Non-yellowing	Key Features
Photoinitiators
