## Welcome

Your Vodafone Mobile Wi-Fi Router includes a Web application, or 'app', which runs on the Router itself. You can open the Web app in a web browser on your computer, tablet or phone, in order to view the status of your Router.

Additionally, when you log into the app, you can also send, receive and manage your SMS text messages, manage your account with your mobile network operator, and make changes to your Router's settings.

This guide covers the Vodafone Mobile Wi-Fi Web application and all the settings it presents. For further details about your Vodafone Mobile Wi-Fi Router hardware device, please refer to the guides with which your Router shipped.

© Vodafone Group 2016, VODAFONE, the Vodafone logos and Vodafone Mobile Broadband are trade marks of the Vodafone Group. Microsoft and Windows are either registered trade marks or trade marks of Microsoft Corporation in the United States and/or other countries. Other product and company names mentioned herein may be the trade marks of their respective owners.

## 1. Overview

When your Vodafone Mobile Wi-Fi Router is switched on and you are connected to its Wi-Fi network, you can view the status of your Router by opening the Mobile Wi-Fi Web application in your web browser. Enter <http://VodafoneMobile.wifi> in your browser to open the app.

The Web app view that is opened first will look similar to the picture below, displaying the status of your mobile broadband and Wi-Fi networks.

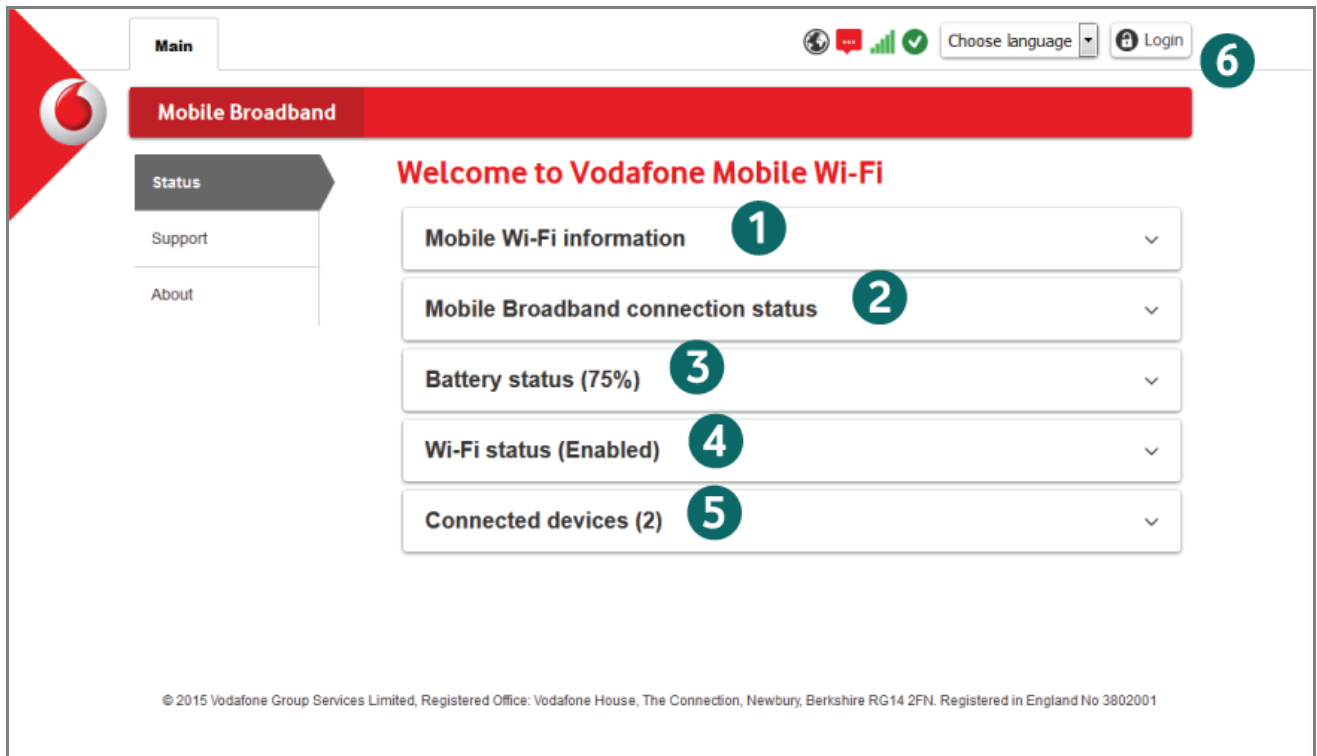

Figure 1 Status View

1. Mobile Wi-Fi – Connection status of your Router, including the name, type and signal strength of the current mobile network connection
2. Mobile Broadband – Length of time connected to the mobile network, amount of data transferred, transfer speed and the mobile phone number of the SIM in your Router
3. Battery status – Charge remaining in your Router's battery
4. Wi-Fi status – The name (SSID) and security type of your Router's Wi-Fi network
5. Connected devices – Number of devices using your Mobile Wi-Fi network, together with the length of time they have been connected, plus further details
6. Login – To see further details about your Router, and to manage its settings, your SMS text messages, and your account with your mobile network operator, you will need to log into the Web app.

## 1.1 Shortcuts

Independent of whether you are logged into your Router, you will notice a row of shortcut icons at the top right of your Mobile Wi-Fi Web app.

Figure 2 Shortcuts

These icons, shown above, are shortcuts and they inform you of particular states and events.

**Globe** – This indicates that you are roaming outside your operator’s mobile network.

**Bubble** – The red speech bubble indicates that your Router has received new SMS text messages for you. Click the icon to view your messages.

**Bars** – The bars indicate the strength of the mobile network signal at your current location. A red exclamation mark **!** will be shown above the bars when there is a limited mobile network service.

**Tick** – The green circle with the tick mark shows that your Router has a mobile connection.

**Choose language** – You can select a different language for the Web app from this menu.

**Note:** If your SIM is not in your Router, a SIM icon will also be shown to alert you to the problem. When your SIM is present and operating normally, no SIM icon is shown.

## 2. Login

The default password for your Vodafone Mobile Wi-Fi Router is 'admin'.

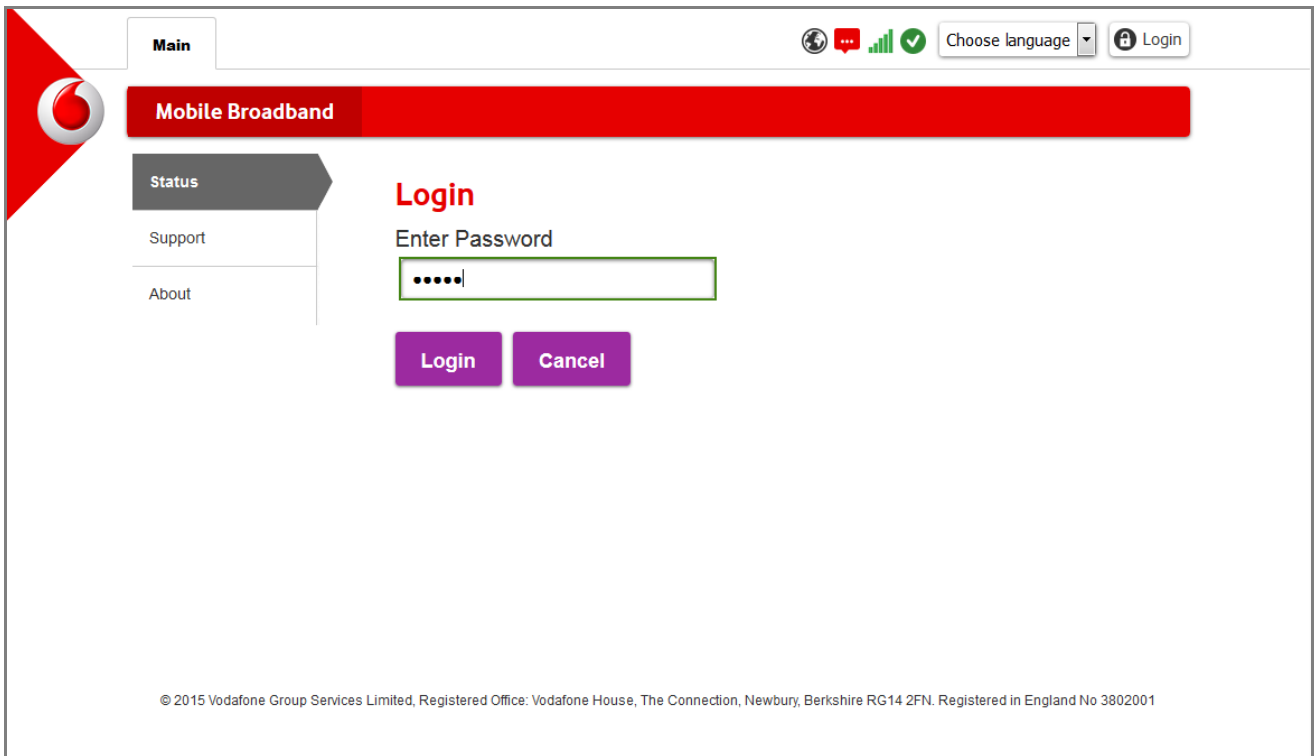

Figure 3 Login

We recommend you change this password when you first log in, to make sure you are the only person who can manage your SMS and your Router's settings.

To change the password, please refer to the [Router admin password](#) section in this guide.

### 3. Mobile Broadband Settings

Once you have logged into your Router, you will notice that the Web app displays more options, giving you access to your SMS text messages, your account and all your Router's settings.

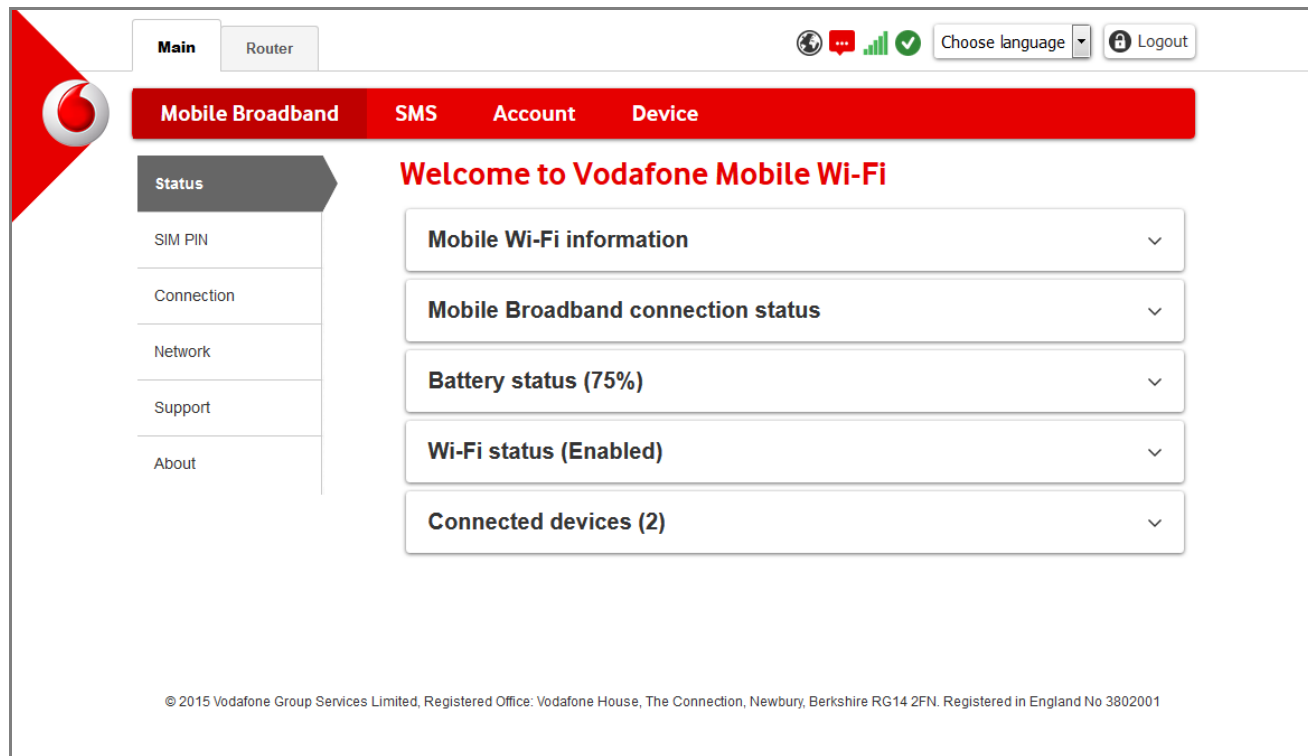

Figure 4 Logged In

### 3.1 SIM PIN

In this view you can manage the Personal Identity Code, or 'PIN', for your Subscriber Identity Module ('SIM'), the small chip that you will have placed in your Router when you set it up.

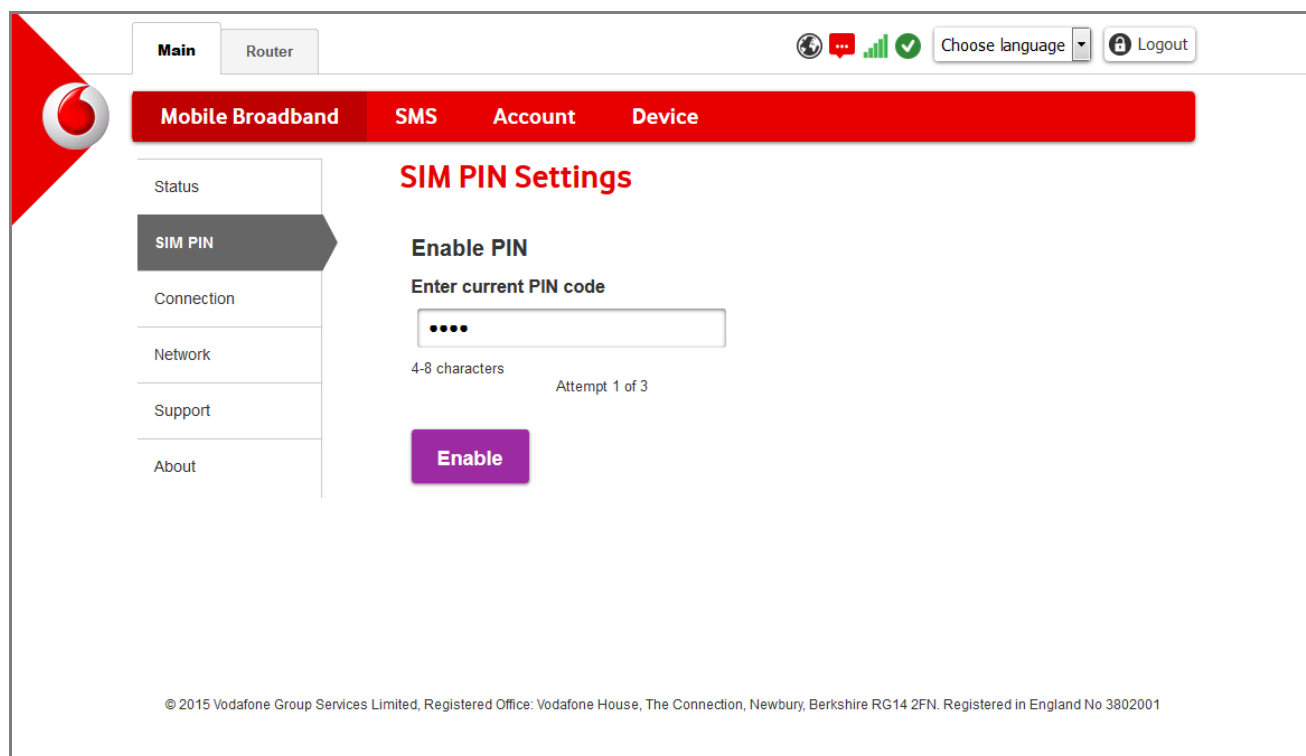

Figure 5 SIM PIN

Some mobile network operators require your PIN to be entered to access their mobile network. In this view, you can store your PIN so that it is automatically entered when requested by your mobile network, instead of your Router prompting you for it each time.

After you have successfully entered your PIN, you can also use this view to change your PIN to suit yourself.

Please note that if you enter your PIN incorrectly three times your SIM will be blocked. When your SIM is blocked, you will need to enter your Personal Unblocking Key ('PUK') to unblock it again.

If you cannot remember your PIN or PUK codes, you can get them from your mobile network operator's Customer Care team.

## 3.2 Connection Settings

The screenshot shows the 'Connection Settings' page in the Vodafone Mobile Wi-Fi Router web application. The page layout includes a top navigation bar with 'Main' and 'Router' tabs, and a red header with 'Mobile Broadband', 'SMS', 'Account', and 'Device' tabs. The 'Connection' tab is selected. The main content area is titled 'Connection Settings' and contains three sections: 'Account type' with a dropdown menu set to 'Pay monthly', 'Connection mode' with a dropdown menu set to 'Automatic', and 'IP type' with a dropdown menu set to 'IPv4 + IPv6'. Below these is a checked checkbox for 'Automatically connect even when roaming' and a 'Save' button. A sidebar on the left contains links for 'Status', 'SIM PIN', 'Connection', 'Network', 'Support', and 'About'. The top right corner has a 'Choose language' dropdown and a 'Logout' button. The footer contains the text: '© 2015 Vodafone Group Services Limited, Registered Office: Vodafone House, The Connection, Newbury, Berkshire RG14 2FN. Registered in England No 3802001'.

Figure 6 Connection Settings

This view allows you to adjust the settings used by your Vodafone Mobile Wi-Fi Router to connect to the mobile network run by your mobile network operator.

### 3.2.1 Account type

This should automatically be set from your SIM, and must reflect the type of account that you have with your mobile network operator. The settings shown in the drop-down menu will depend on the types of account offered by your network operator. You won't normally need to change any settings here, but you can – for example if you change the type of account that you have with your operator.

See below for details of the fields that become available when you select 'Custom' in the Account type drop-down menu.

### 3.2.2 Connection mode

This allows you to set how your Router should react when a mobile connection is available:

**Automatic** – Your Router will automatically open a mobile connection as soon as one is available, rather than waiting for you to open one yourself

**Prompt** – Your Router will prompt you to open a mobile connection using the Web app, rather than automatically opening it

**On Demand** – Your Router will only open a mobile connection when data needs to be transferred, at which point it will automatically connect, disconnecting again afterwards.

**IP type** – This should be set for you according to your mobile network operator's network requirements. Please contact your operator before changing this setting.

**Automatically connect even when roaming** – Select this option if you want your Router to open a mobile connection even when you are not in coverage of the mobile network run by your own operator. This is known as 'roaming'.

### 3.2.3 Custom mobile network connection settings

If you select 'Custom' in the Account type drop-down menu, you can enter your own settings for the fields listed below. Please note that because these are the settings that your Router requires to make a mobile connection to your mobile network operator's network, you shouldn't normally need to change them.

**APN** – Short for 'Access Point Name'. The APN is the computer in the internet via which you connect to your mobile operator's mobile network. The address to enter here will have a format such as 'internet.vodafone.com'.

**DNS** – Normally your Router will be given DNS Settings automatically when it connects. However, if you wish to enter manual addresses, you need at least one Primary DNS address. The secondary DNS address is optional and may be left blank.

**DNS2** – If you are using manual DNS Settings, you can enter a secondary DNS address here.

**Security** – Select the type of security you wish to use from this menu. Supported security types will depend on your mobile network operator and your Mobile Wi-Fi Router, but will normally include protocols such as PAP (Password Authentication Protocol) and CHAP (Challenge Handshake Authentication Protocol).

**Username** – Name required to authenticate with your chosen security protocol.

**Password** – The password matching the username you entered above.

**Confirm password** – Confirm the password entered in the 'Password' field. If the password and confirmation do not match, you will be asked to re-enter your password and confirm it again.

## 3.3 Network Settings

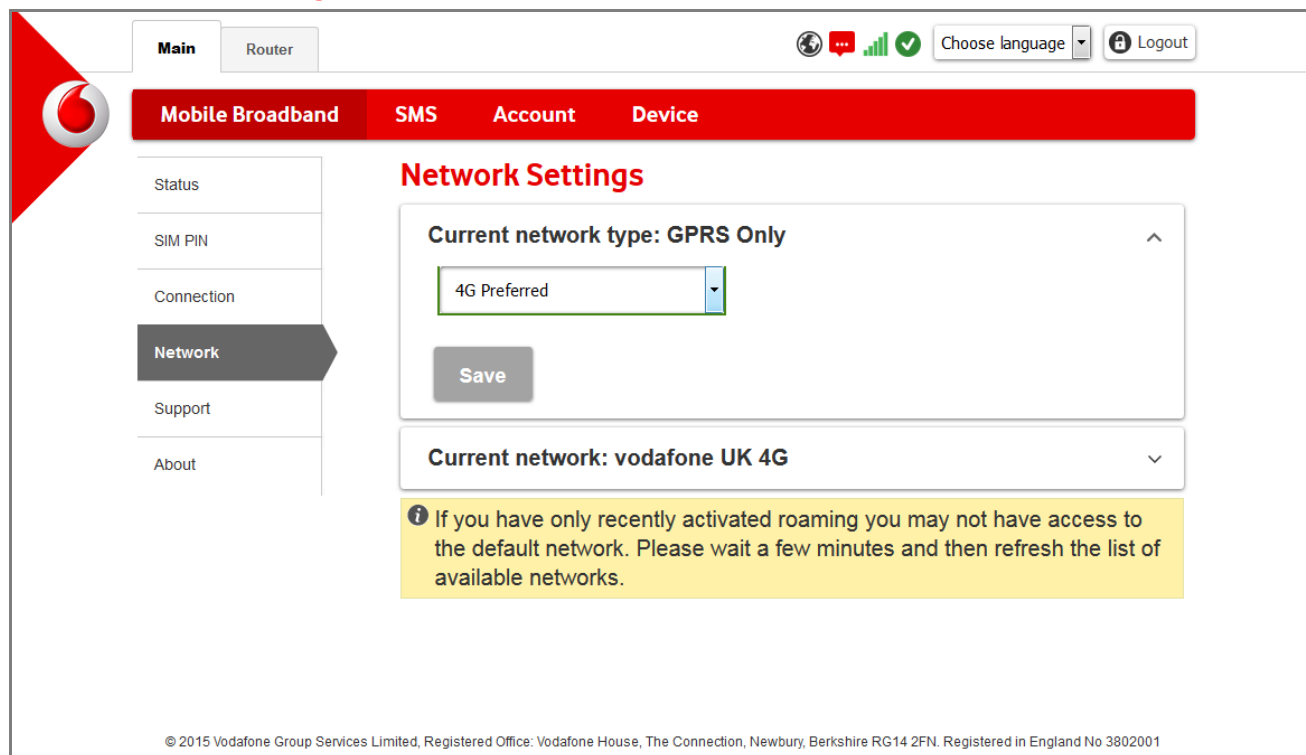

Figure 7 Network Settings

### 3.3.1 Current network type

These settings affect the 'bearer' used by your Router when connecting to your mobile network operator's mobile network. The bearer is the protocol used to transfer data across a mobile phone network. Bearers include 4G, 3G+, 3G, GPRS and EDGE.

Newer mobile devices generally support several bearers, and will switch between them as necessary, but older devices may only support certain bearers. Newer bearers are generally faster than older bearers, but may also consume more energy, depleting batteries faster than older, slower bearers.

Selecting an exclusive option like '3G Only' will limit your Router to using only that bearer, so it will not find a network when that bearer is not available. In contrast, setting a preference, such as '3G Preferred', will set your device to use your preferred bearer when it is available, but drop down to another bearer when it is not.

When you make any changes to any of the settings here, click 'Save' to save them. If you don't click the Save button, any settings changes you have made will be discarded.

### 3.3.2 Current network

Manage how your Router selects the best mobile network to use for a mobile connection.

**Automatic** – Your Router will search for and select the best mobile network automatically, according to preferences shared between your Router, your SIM and the mobile networks that are available.

**Search** – Click this button to display a list of all the mobile networks that are available at your current location, and select one of them manually. Your Router will then attempt to connect to this network whenever it starts up.

**Save** – Save the selected network as your preferred mobile network.

### 3.4 Support

This view gives details of how to contact the Customer Service team at your mobile network operator.

### 3.5 About

This view shows the version of the Vodafone Mobile Broadband Web app that is installed on your Mobile Wi-Fi Router. This information may be useful when discussing any problems with your mobile network operator's Customer Service team.

## 4. SMS

The SMS view shows a list of all the SMS text messages that have been sent to the SIM in your Router, allowing you to read and reply to them, and delete them.

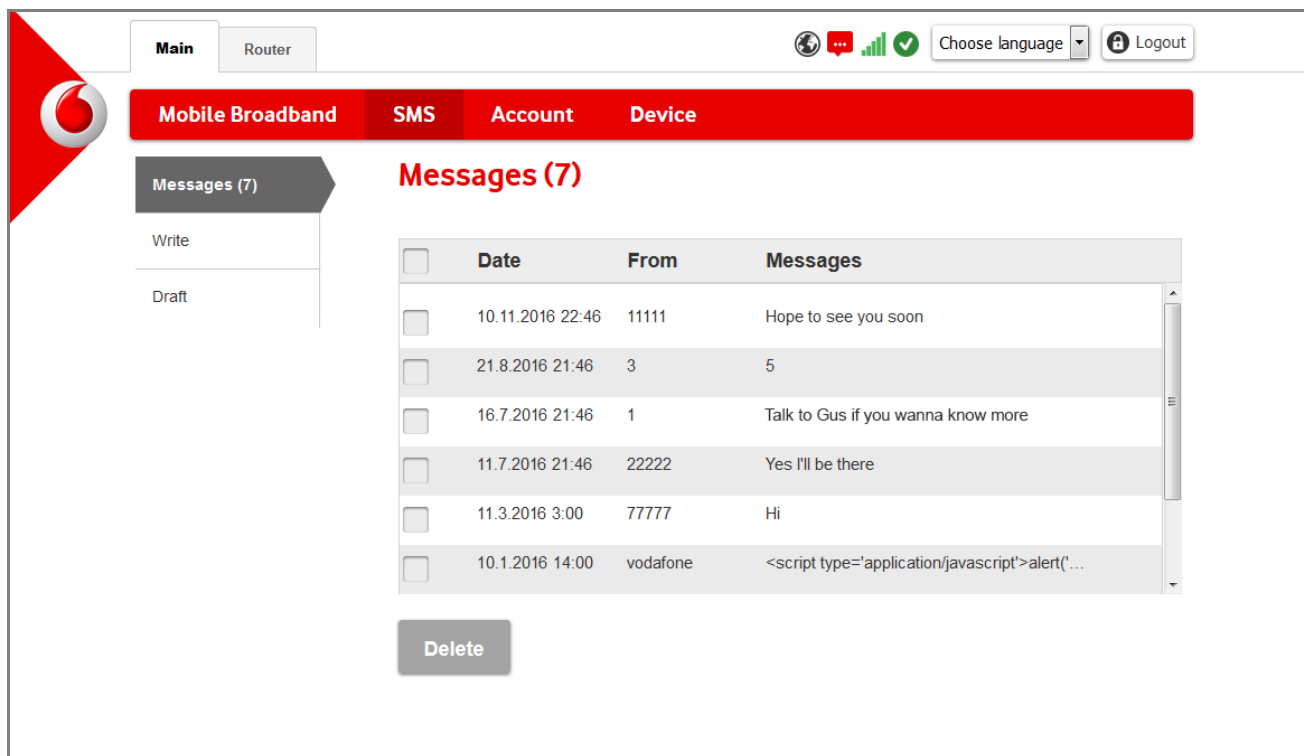

Figure 8 SMS View

**Write** – Allows you to write and send new SMS text messages to your contacts.

**Draft** – Stores any messages you have started writing but have not yet sent.

## 5. Account

This view allows you to log into the account that you have with your mobile network operator.

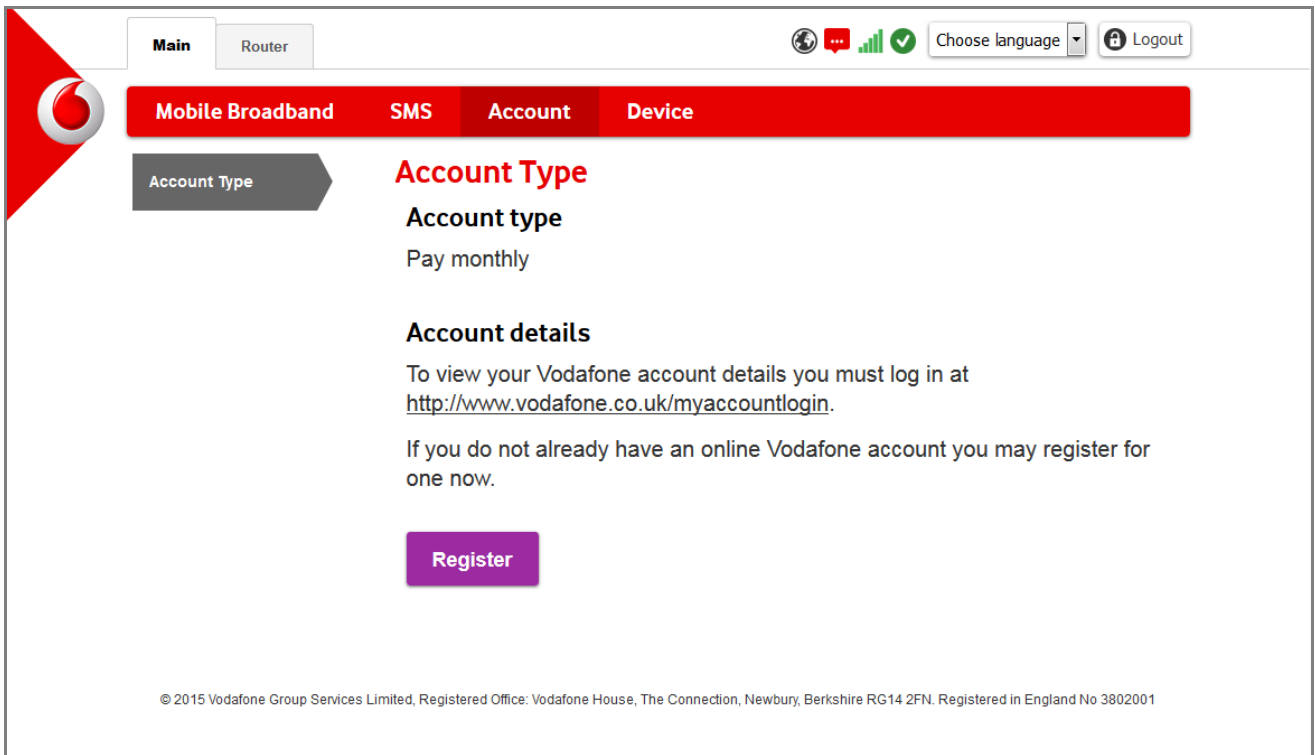

Figure 9 Account View

Shown here is the Account login for a customer of Vodafone UK – your Account page may look different, depending on the options that your mobile network operator offers.

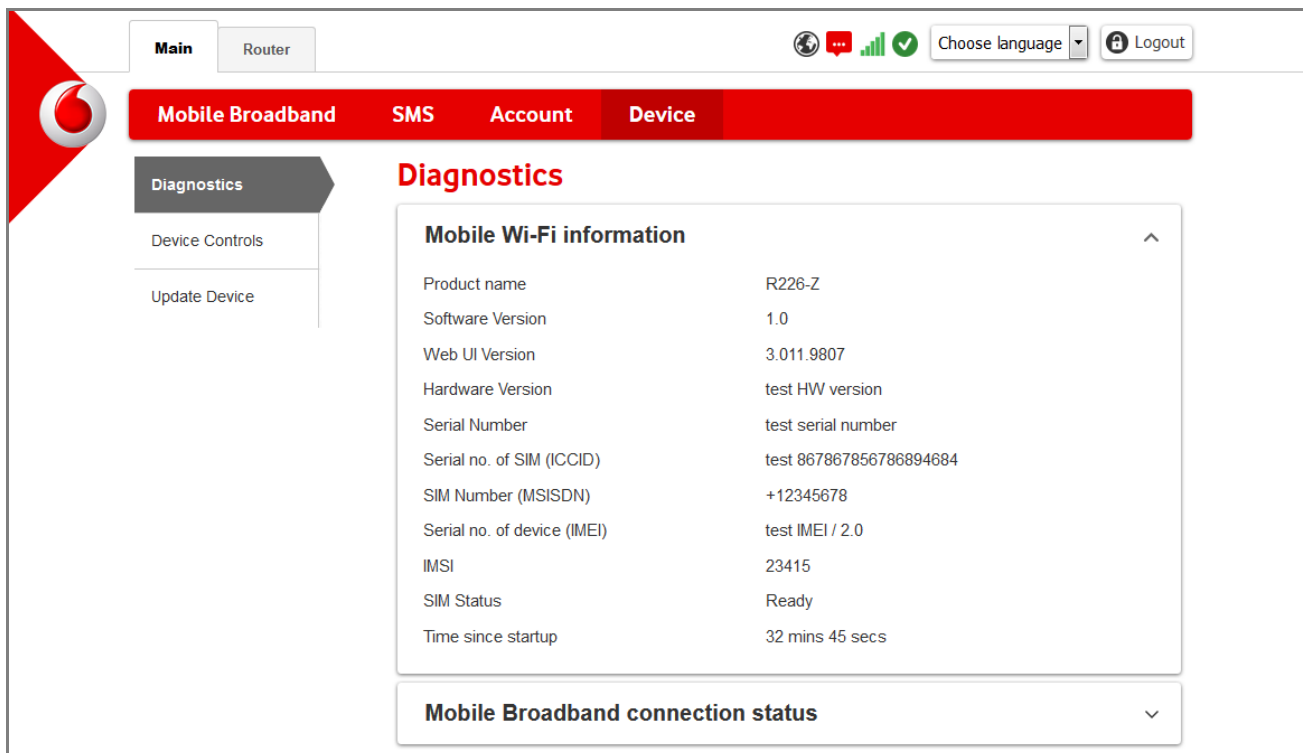

## 6. Device

This view shows details and controls for your Vodafone Mobile Wi-Fi Router.

### 6.1 Diagnostics

The Diagnostics view may help you when you are troubleshooting problems with your Vodafone Mobile Wi-Fi Router.

#### 6.1.1 Mobile Wi-Fi information

The screenshot shows the Vodafone Mobile Wi-Fi Router web application interface. The top navigation bar includes 'Main' and 'Router' tabs. The main navigation menu has 'Mobile Broadband', 'SMS', 'Account', and 'Device' options. The 'Diagnostics' section is active, showing 'Mobile Wi-Fi information' and 'Mobile Broadband connection status'.

Mobile Wi-Fi information	
Product name	R226-Z
Software Version	1.0
Web UI Version	3.011.9807
Hardware Version	test HW version
Serial Number	test serial number
Serial no. of SIM (ICCID)	test 867867856786894684
SIM Number (MSISDN)	+12345678
Serial no. of device (IMEI)	test IMEI / 2.0
IMSI	23415
SIM Status	Ready
Time since startup	32 mins 45 secs

Below the table is a section for 'Mobile Broadband connection status'.

Figure 10 Mobile Wi-Fi Diagnostics

This view shows the status of your Vodafone Mobile Wi-Fi Router and your SIM. Depending on your mobile network operator, your SIM number may not be displayed, but the SIM status will indicate any current problems with your SIM.

## 6.1.2 Mobile Broadband connection status

This view shows the status of the connection between your Router and your operator's mobile network.

The screenshot displays the Vodafone Mobile Wi-Fi Router web application interface. The top navigation bar includes 'Main' and 'Router' tabs, along with icons for signal strength, Wi-Fi, and a 'Logout' button. The main menu features 'Mobile Broadband', 'SMS', 'Account', and 'Device' sections. The 'Diagnostics' section is active, showing 'Mobile Wi-Fi information' and 'Mobile Broadband connection status'.

Mobile Broadband connection status	
Mobile Broadband Connection Status	Connected
Uptime of current Internet connection	33 mins 31 secs
Data rate	31.42Kb/s
Total volume	3.93KB
Total time	33 mins 31 secs
IPv4 IP address	1.2.3.4
IPv4 DNS1	192.168.1.1
IPv4 DNS2	192.168.1.2
IPv6 IP address	2607:f0d0:1002:51::4
IPv6 DNS1	0:0:0:0:ffff:c0a8:1
IPv6 DNS2	0:0:0:0:ffff:c0a8:1
Reset the 'Total volume' and 'Total time'	<a href="#">Reset Counter</a>

The above summary is an estimate, please refer to your bill for exact figures.

Figure 11 Mobile Broadband connection status

**Data rate** – A snapshot of the current data transfer speeds being achieved. Speed can be affected by various factors including the distance of your computer, tablet or phone from your Router, the number of other people connected to your Router, the number of other customers connected to the mobile network base station and the type of activity of all users.

**Total volume** – An indication of the total amount of data sent and received over the mobile network.

**Total time** – The cumulative length of time your Router has spent connected to the mobile network. These figures could be useful if you are tracking connected time and have a time-based network data tariff, or are tracking data usage on a data-based tariff.

**IP address** – These are the addresses for your Router on the internet.

**DNS server** – The Domain Name System servers used by your Router to resolve internet names and addresses.

**Reset Counter** – Clicking this button will set the volume and time indicators back to zero.

## 6.2 Device Controls

This view contains controls with which you can reset or reboot your Vodafone Mobile Wi-Fi router.

### 6.2.1 Reboot and Restore

**Reboot** – Switches your Router off and then back on again without changing any of its current settings.

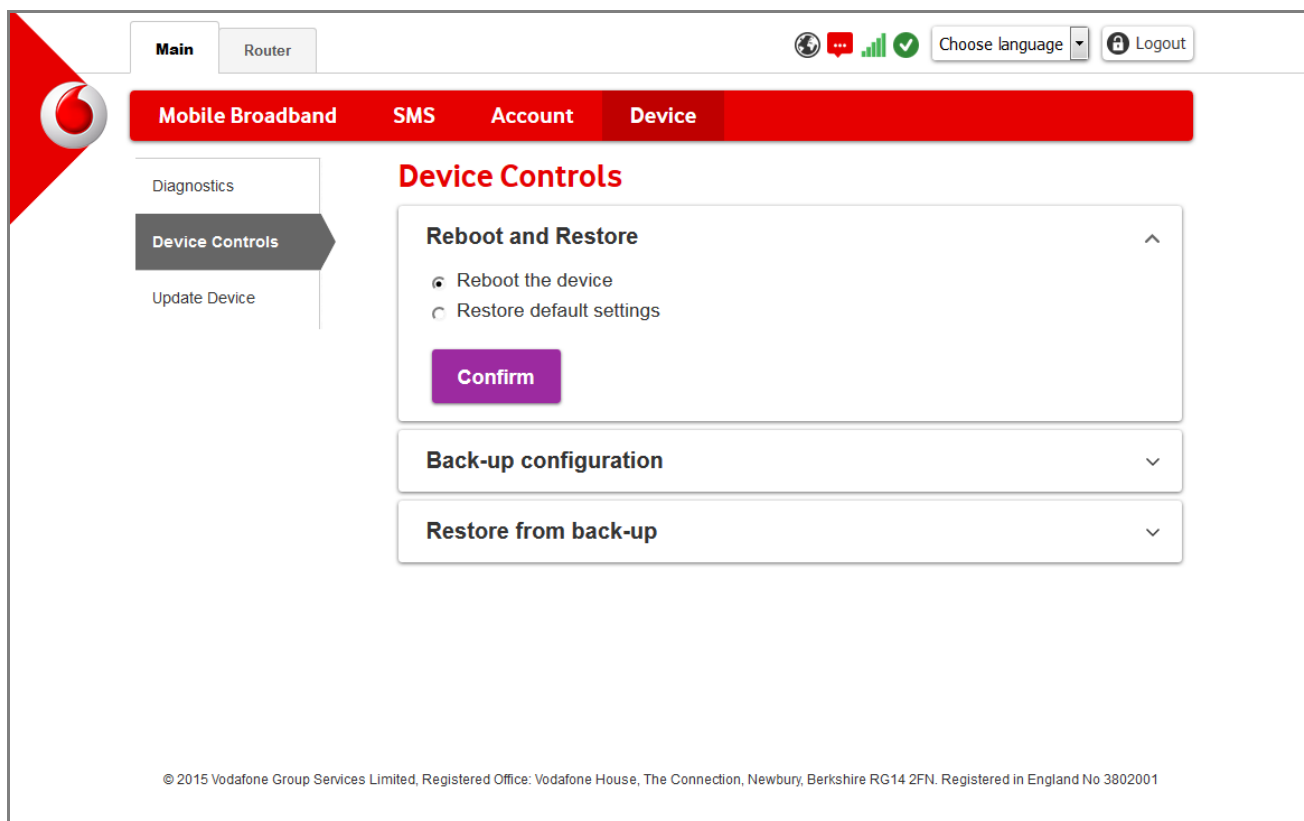

Figure 12 Reboot

**Restore** – Changes all the settings on your Router (eg. the SSID and the admin password) back to their factory defaults, set as they were when you first got your Router.

Please note that a reset will also delete your data usage information. If you plan to reset your Router, but you would like to keep your current settings for some reason, back them up first, as explained below.

## 6.2.2 Back-up configuration

Clicking the Backup button creates an XML file in your web browser containing all the settings that you have currently defined in your Router. You can then save this file – eg. onto the hard disk of your computer – to keep the settings for future use.

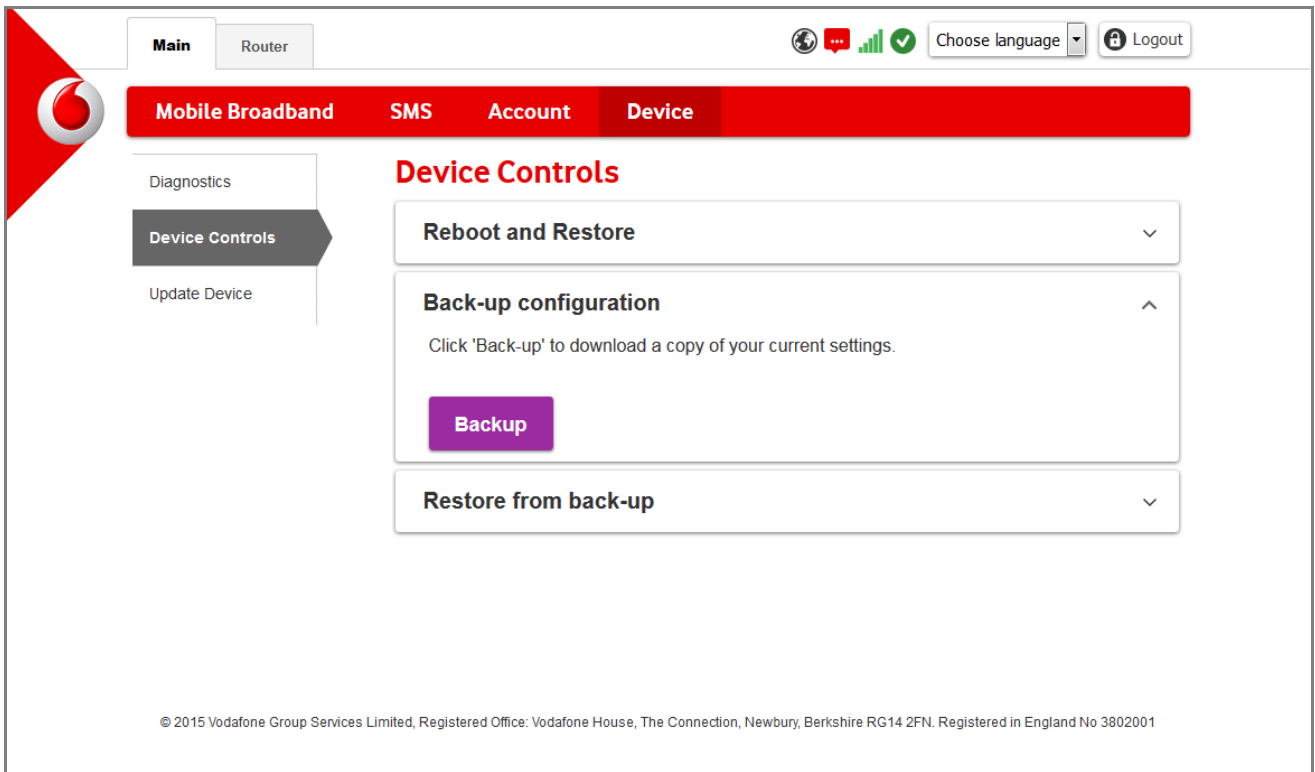

Figure 13 Backup

### 6.2.3 Restore from back-up

Click the **Browse...** button to navigate to and select a settings file for your Router that you have previously saved.

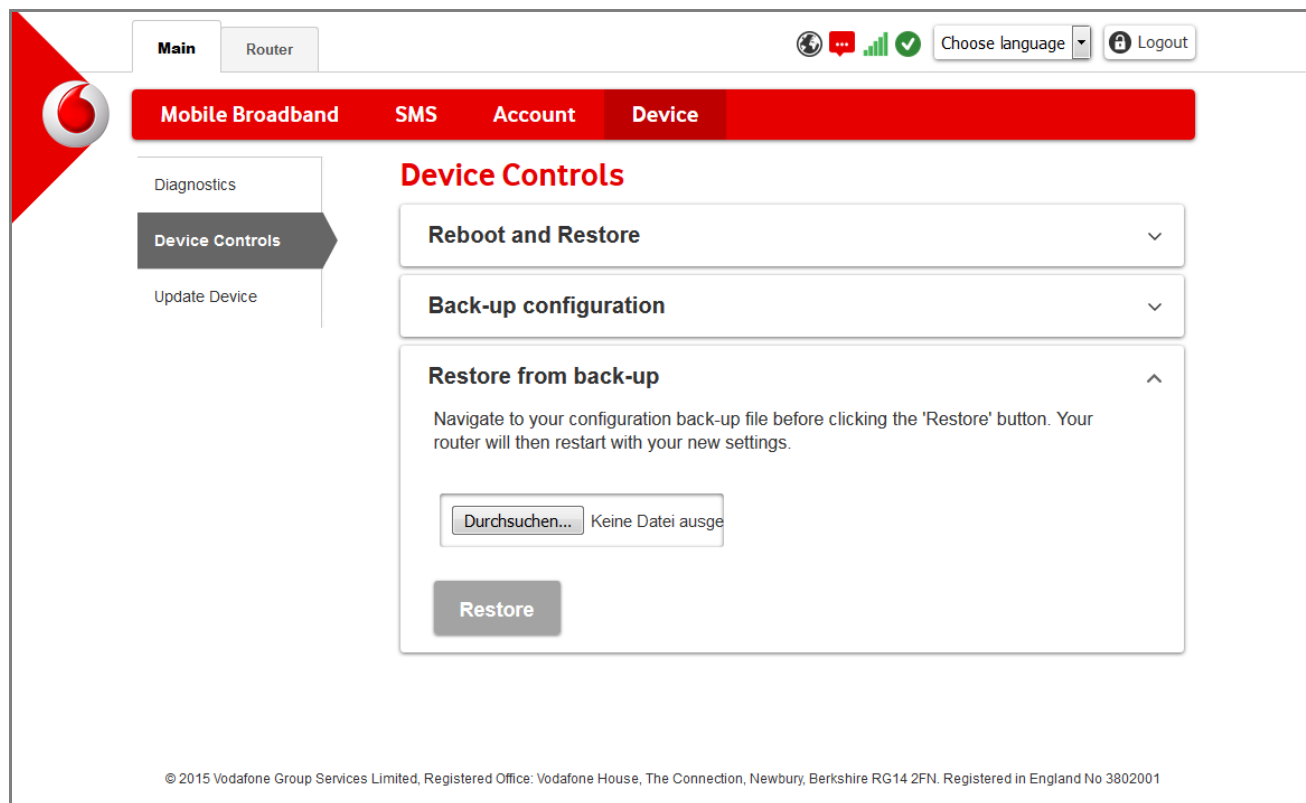

Figure 14 Restore

Click **Restore** to restore the saved settings back onto your Router. The settings will overwrite the current settings on your Router and your Router will restart

## 6.3 Update Device

This view allows you to check if there are any newer versions of the Vodafone Mobile Wi-Fi Web app that you can install onto your Router. Updates may contain bug fixes for software problems that have been discovered since you purchased your Router, as well as new or improved software functions.

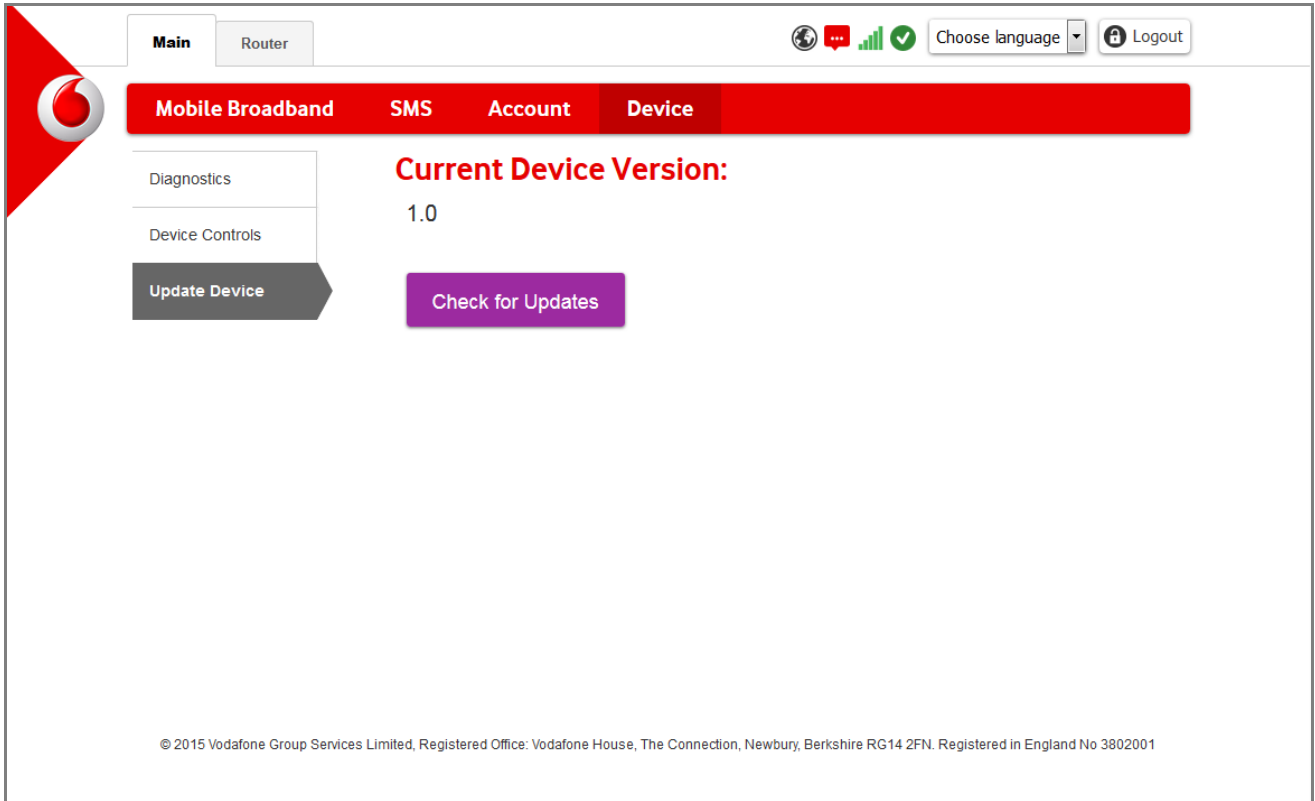

Figure 15 Updates

Click **Check for Updates** and follow the on-screen instructions.

## 7. Router – Wi-Fi

This tab of the Vodafone Mobile Wi-Fi Web app contains all the settings for the local Wi-Fi network that your Router creates and manages for you.

### 7.1 Wi-Fi Settings

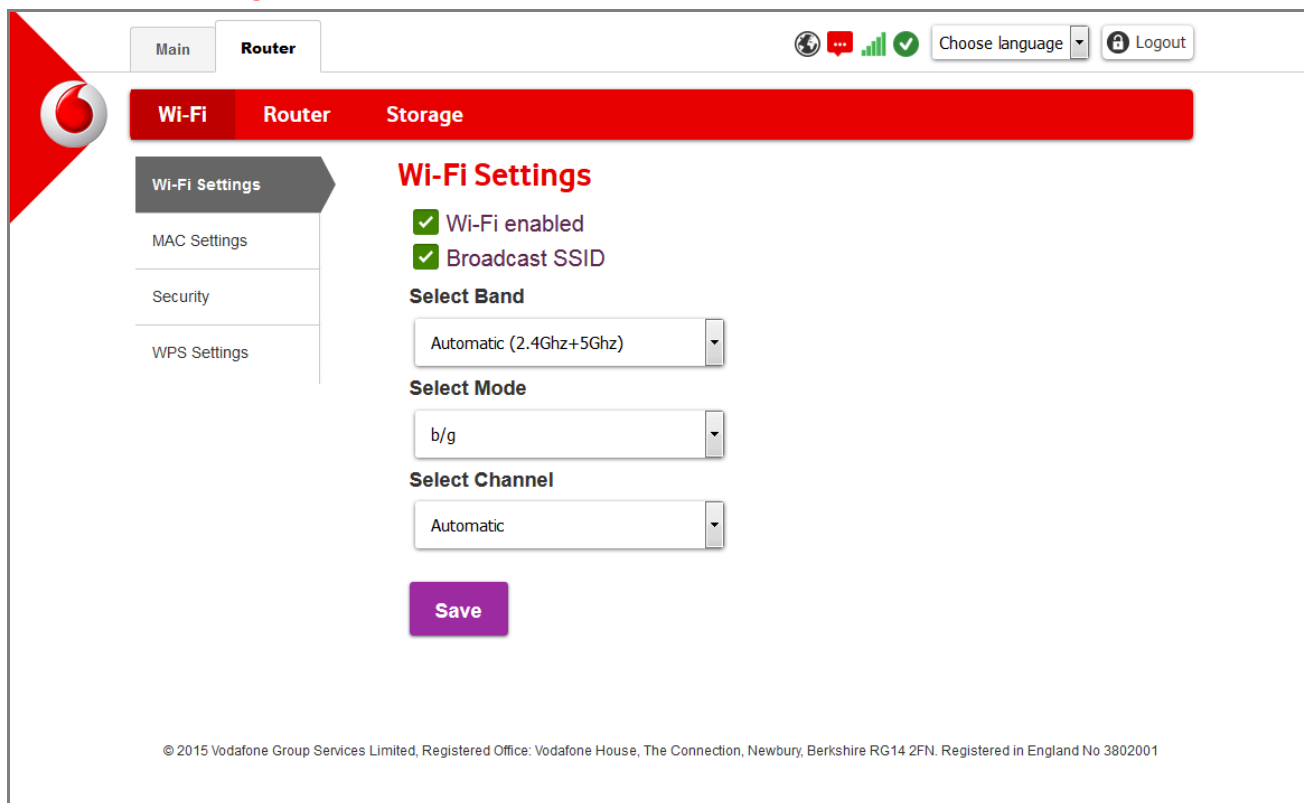

Figure 16 Wi-Fi Settings

**Wi-Fi enabled** – When selected, your Mobile Wi-Fi Router makes a local Wi-Fi network available, to which you can connect Wi-Fi-enabled devices such as notebook computers, tablets or smartphones. These devices will then be able to access the internet via the mobile connection that is also managed by your Router.

**Broadcast SSID** – When this option is selected, the name of the Wi-Fi network created by your Router will show up on any Wi-Fi enabled device, allowing it to be easily selected for use by that device, as long as the user has your Wi-Fi network password.

**Select Band** – When Automatic is selected, your Router will choose the best radio frequency to use for your Wi-Fi network, depending on the type of devices that are connecting to it. You can also manually select a radio frequency in the drop-down menu. The options in the menu will depend on the frequencies supported by your Router.

**Mode** – The type of Wi-Fi transmission your Router is using. Normally the pre-selected setting will offer the widest and best support. However, older computers may only support certain older transmission types, so you may need to adjust this setting if you are attempting to get an older device connected.

**Channel** – Automatic means that your Router will attempt to reduce interference from other Wi-Fi networks in the vicinity by selecting a transmission channel that is not already in use. This is normally the best channel setting to use, but if you think your Wi-Fi network is being disrupted anyway, you can manually select a specific channel instead.

## 7.2 MAC Settings

A Media Access Control ('MAC') address is a unique number identifying a specific hardware device. If you enable MAC filtering on your Mobile Wi-Fi Router, you can increase the security of your Wi-Fi network by only allowing access for devices with the MAC addresses you have defined.

The screenshot shows the 'MAC Settings' page in the Vodafone Mobile Wi-Fi Router web application. The page has a red header with 'Wi-Fi', 'Router', and 'Storage' tabs. The 'Router' tab is selected. On the left, there is a navigation menu with 'MAC Settings' highlighted. The main content area shows 'MAC filtering enabled' with a green checkmark. Below this is a table titled 'Authorised devices' with columns for 'MAC Address', 'Host name', and 'Description'. Two devices are listed: 'Jim' with MAC address '02:01:01:01:01:01' and 'Jim's PC' as the description, and 'Graemes iPad' with MAC address '02:01:01:0A:01:01'. A 'Remove' button is below the table. Below the table is a section titled 'Add new devices' with a table for adding new devices, including columns for 'MAC Address', 'Host name', and 'Description'. A 'Save' button is at the bottom.

Figure 17 MAC Settings

Please note that it is important to add the MAC address of your own computer or device to the **Authorised devices** list. Otherwise you will not be able to use the Wi-Fi network or open the Web app in your browser.

Use the operating system of your phone, tablet or computer to discover its MAC address, and then add it to your Wi-Fi network using the **Add new devices** section shown above.

The **Remove** button allows you to delete MAC addresses from your network.

## 7.3 Security

The screenshot shows the 'Security Settings' page in the Vodafone Mobile Wi-Fi Router web application. The page features a red header with navigation tabs for 'Wi-Fi', 'Router', and 'Storage'. The 'Security' tab is selected. The main content area is titled 'Security Settings' and includes the following fields and options:

- SSID:** A text input field containing 'VodafoneMobileWiFi-123456'.
- Key:** An empty text input field.
- Select Authentication:** A dropdown menu currently set to 'WPA2-PSK'.
- Select Encryption:** A dropdown menu currently set to 'MIX'.
- Save:** A grey button at the bottom of the form.

A sidebar on the left contains links to 'Wi-Fi Settings', 'MAC Settings', 'Security' (which is highlighted), and 'WPS Settings'. The top navigation bar includes 'Main', 'Router', 'Choose language', and 'Logout'. At the bottom of the page, there is a copyright notice: '© 2015 Vodafone Group Services Limited, Registered Office: Vodafone House, The Connection, Newbury, Berkshire RG14 2FN. Registered in England No 3802001'.

Figure 18 Security Settings

**SSID** – This is the name of the Wi-Fi network created by your Vodafone Mobile Wi-Fi Router, which people will see when looking for a Wi-Fi network to join. The SSID will be 'VodafoneMobileWiFi-xxxxyy' to begin with – the 'xxxxyy' part being numbers and letters unique to your Router.

You can change the SSID if you wish. Once you have changed the SSID, you will need to re-connect to your Wi-Fi network by selecting its new name on your computer or other Wi-Fi-enabled device.

**Key** – This is the password that people need to enter to connect to the Wi-Fi network created by your Vodafone Mobile Wi-Fi Router.

You can change the key if you wish. As when you change the SSID, you will need to re-connect to your Wi-Fi using your new key once you have changed it.

**Please note:** We recommend that you change both the SSID and the key to increase the security of your Wi-Fi network. However, please make sure that you make a note of the new details somewhere safe, to ensure you do not lose contact with your Router in the future.

If for some reason you cannot remember the details, you can use the Reset button on your Mobile Wi-Fi Router to set it back to the SSID and key that it came with. Note that this will reset all the other settings on your Router as well.

**Select Authentication** – Your Router will come set to the most secure authentication available at the time it shipped. This will normally be the best setting to use, but if you are attempting to get an older computer attached, you may find it does not support the most

recent authentication standards. In this case, you may need to select one of the other authentication types from the drop-down menu, depending on what the computer in question actually supports.

**Select Encryption** – Encryption enhances the security of your Wi-Fi network by encrypting all the data transferred in the network. The encryption option 'MIX' means your Router will support both TKIP and AES encryption algorithms in WPA or WPA2, and the algorithm used will depend on the computer or Wi-Fi-enabled device that is connecting.

Select **Save** to save any changes to the settings.

## 7.4 WPS Settings

'WPS' stands for Wireless Protected Setup and offers an easy way to get Wi-Fi-enabled devices that support WPS connected to your Wi-Fi network.

Using WPS, a computer or device will search for your Wi-Fi Router's network, and then request a PIN to connect. You can define your PIN in this view once WPS is enabled.

When the correct PIN is entered, the device that is connecting will automatically enter the correct SSID, password and security details, connect to the network and save these connection details for future use.

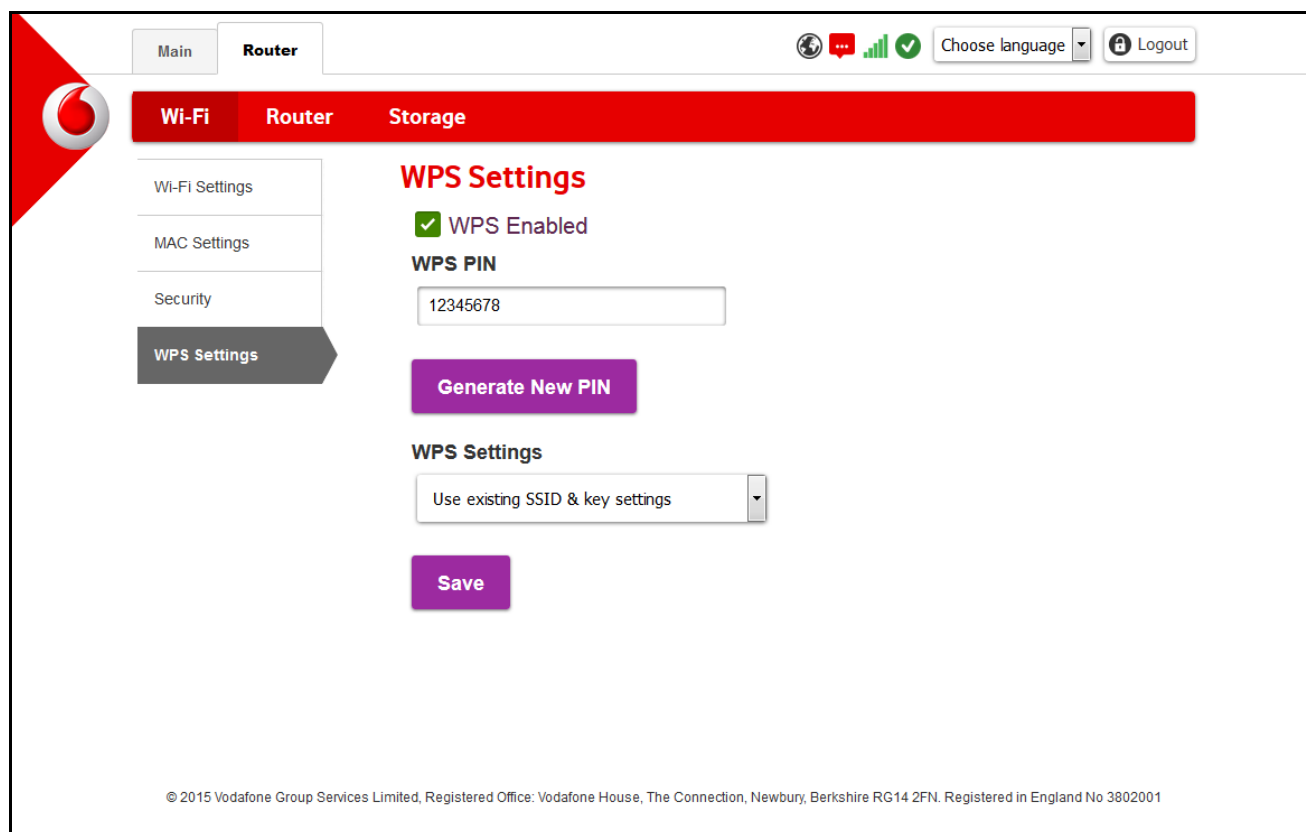

Figure 19 WPS Settings

WPS will not be enabled on your Router by default, but you can enable it when you want to connect a new computer or other device to your Wi-Fi network. Note that the device in question also needs to support WPS.

## 8. Router

### 8.1 Router Settings

#### 8.1.1 Router admin password

This is the administration password that you need to enter to log into your Vodafone Mobile Wi-Fi Router, eg. to manage your SMS text messages, or to make changes to your Router's settings.

When you first set up your Router, the admin password will be set to 'admin'.

Figure 20 Router admin password

**Please note:** We recommend that you change your admin password to increase the security of your Wi-Fi network. However, please make sure that you make a note of your new password somewhere safe, to ensure you can log into your Router in the future.

If for some reason you cannot remember your admin password, you can use the Reset button on your Mobile Wi-Fi Router to set it back to 'admin'. Note that a reset will reset all the other settings on your Router as well.

## 8.1.2 IP Address of your router

Figure 21 IP Address of your router

**LAN domain** – This will be set to 'vodafonemobile.wifi' when you first set up your Vodafone Mobile Wi-Fi Router, but you can change it if you wish.

**IP Address** – The Internet Protocol address that identifies your Router on the local Wi-Fi network that it creates for you. You would not normally need to change your Router's IP address, unless you need it to fit in with other networks that you are also managing.

**Subnet mask** – You would not normally need to change the value in this field unless you need it to fit in with other networks that you are also managing.

**DHCP Server enabled** – When you select this option, your Router will automatically assign an IP address to any device that connects to your Wi-Fi network. When you have enabled DHCP, you can also define the range of addresses that your Router will assign, and how long these will be valid for the devices to which they are assigned (the 'Lease').

It is normally a good idea to enable DHCP, as without it, you will have to assign static IP addresses to all devices on your Wi-Fi network when they first connect.

## 8.2 NAT Settings

Enable Network Address Translation, 'NAT', to set your Vodafone Mobile Wi-Fi Router to allow network access for specific applications. NAT is, for example, very often required for games.

The screenshot displays the NAT Settings page in the Vodafone Mobile Wi-Fi Router web application. The page is titled 'NAT Settings' and shows that NAT is enabled, indicated by a green checkmark. Below the status, there is a 'Save' button and a table listing three applications with their respective protocols, source ports, destination IP addresses, and destination ports. Each application row includes 'Delete' and 'Change' buttons. At the bottom of the page, there are input fields for adding a new application, including 'Application name', a protocol dropdown menu (currently set to 'TCP'), 'Source port', 'Destination IP', 'Destination port', and a 'Save' button.

Application	Protocol	Source port	Destination IP	Destination port	Delete	Change
app1	UDP	80	192.168.0.2	13	Delete	Change
app2	TCP	8080	192.168.0.4	56	Delete	Change
app3	TCP	978	192.168.0.8	678	Delete	Change

© 2015 Vodafone Group Services Limited, Registered Office: Vodafone House, The Connection, Newbury, Berkshire RG14 2FN. Registered in England No 3802001

Figure 22 NAT Settings

NAT allows you to enhance the security of your network by only allowing certain applications to reach the internet. In order to allow an application, you will need to know the source port numbers or source port ranges, and the protocol used for communication – TCP, UDP, or both. Consult the user guide for the application you are setting up to see which options you should select.

You can delete or change authorisation for an application using the **Delete** and **Change** buttons on the right-hand side.

Please note that you will need to set up static IP addresses on your Router for each device that has an application using NAT.

## 9. Storage

When your Router supports memory cards, you can upload files onto your memory card and you can also give access to this storage to other users who are connected to your Wi-Fi network.

### 9.1 File Storage

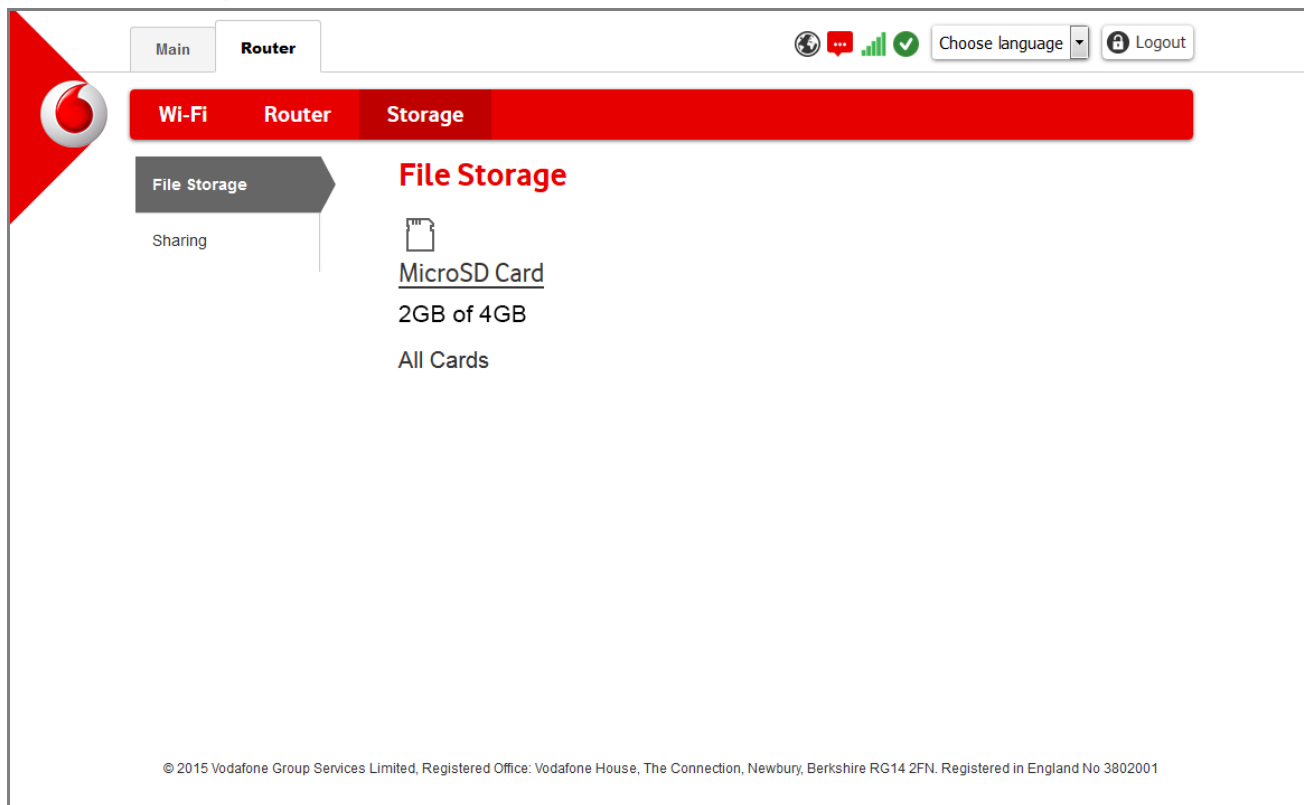

Figure 23 File Storage

The File Storage view shows any memory card that you have in your Mobile Wi-Fi Router, together with an overview of its capacity and the amount of space left on it.

Click the memory card icon to upload documents to your memory card, remove items from it, and to create or delete folders on the card.

Once you have created a folder, you will be able to open it in order to upload documents to it or remove document from it.

## 9.2 Sharing Settings

The screenshot shows the 'Sharing Settings' page in the Vodafone Mobile Wi-Fi Router web application. The page has a red header with 'Wi-Fi', 'Router', and 'Storage' tabs. The 'Storage' tab is active. On the left, there is a sidebar with 'File Storage' and 'Sharing' (highlighted). The main content area is titled 'Sharing Settings' and contains the following elements:

- Text: "Enabling sharing will allow anyone connected to your device to view and download items stored on your Micro SD card using this web site."
- Text: "You can choose which folders to share and if you would like others to be able to view your files or also be able to delete files and create additional files."
- Checkbox:  HTTP sharing
- Section: **Share files with non admin users**
- Dropdown menu: Read Only all
- File list:
 

Folder Name	Capacity
MicroSD Card	2GB of 4GB
humeli	
scriptQueue	
My Documents	
- Button: Save

© 2015 Vodafone Group Services Limited, Registered Office: Vodafone House, The Connection, Newbury, Berkshire RG14 2FN. Registered in England No 3802001

Figure 24 Sharing Settings

**HTTP sharing** – Select this option to give other users in your Wi-Fi network access to your memory card. De-select it to stop sharing your card over your network.

**Share files with non-admin users** – The options in this drop-down menu allow you to set how other users will be able to work with your memory card:

**Read Only all** – All users will be able to see the selected folder

**Read Write all** – As well as being able to see the selected folder, all users can upload new items to it or delete items from it.
