# THE COMPANY

## ISOCELL

As a specialist for cellulose insulation and airtight solutions

ISOCELL has dedicated itself to two of the most important issues in the field of the energy-efficient building shell. We have been providing and developing solutions for new constructions and renovations on the low and passive house sector for many years. All products in the ISOCELL system range are coordinated with one another for specific and professional use in all insulation and sealing work.

Isocell's system concept: insulating and sealing within a system does not mean: 'Here we have a product – now let us find a use for it' or, 'they will know what to do with it'. BUT: 'Advisory service on the best possible solutions for insulation, roof sheeting and airtight systems with coordinated products'.

Assurance for installers and planners through the system guarantee. Always up-to-date through our collaboration with specialist committees and as a partner in projects run by test and research institutes and universities.

# WELCOME to ISOCELL

---

We are experienced in the installation of blown insulation and airtight systems. We take over 600 airtight measurements every year on construction sites. Our own consequent research and development together with consistent cooperation with research institutes and universities form the basis for the development of our product system and ISOCELL's unique expertise.

The distribution of its system solutions throughout the whole of Europe is controlled from the company headquarters in Neumarkt. It is here that the ISOCELL Academy can also be found. This training centre for installation partners, attended by more than 500 participants annually at courses for experts and discussion, has established itself

as a platform for systematic know-how transfer. The production of cellulose insulation is carried out at five plants: in Hartberg Austria, Schoppen (Belgium), Plourin-lès-Morlaix and Servian (both in France) and since 2013 also in Tibro (Sweden).

ISOCELL'S team now consists of 141 staff members at home and abroad. There are 64 employees in Neumarkt.

# PRODUCT PORTFOLIO

## INSULATION AND SEALING WITH A SYSTEM GUARANTEE

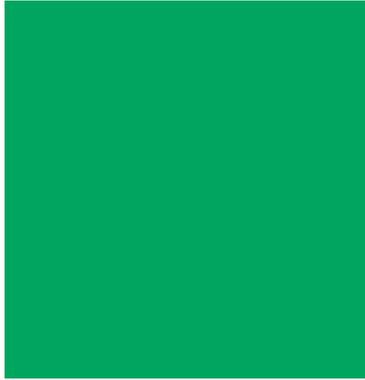

'The best partner by far'

For our customers this means: ISOCELL assesses the construction project with regards to insulation and airtightness and supplies the appropriate product systems

and machines. On top of that, advice and technical support.

All products supplied by ISOCELL are perfectly coordinated solutions for specific and professional use in insulation and sealing work. With this unique product system our company has established itself as problem solver particularly in the construction of low and passive houses as well as in the renovation sector. Whether insulation, roof sheeting or airtight system is concerned – the system guarantee and advice provided by ISOCELL give the installer and planner confidence that the best possible products are used on the building site.

## CELLULOSE INSULATION

'There is nothing so old as yesterday's newspaper', so they say. Not old, but tried and tested is the insulation material that can be made from it. Over 50 tons of cellulose are distributed by ISOCELL annually to more than 13 European countries. Besides its excellent insulation values ISOCELL insulation is unsurpassed as heat protection.

Cellulose insulation follows a simple principle: old paper is defibred and mineral salts are added. The resulting flock fibre is fire-resistant and does not rot. It is blown into the respective cavities by approved companies, settles well without sagging and fills even the narrowest of gaps completely. ISOCELL's system for blowing in insulation material ensures seamless insulation matting without any waste, thus saving costs. Even when the insulation layer is very thick the flock is appealing due to its extremely low thermal conductivity and its ability to settle without sinking.

Not only the result is ecological because a lot of energy is saved – even in production cellulose is unparalleled from an ecological point of view: in comparison to other insulation materials, such as polystyrene or glass fibre, the primary energy consumption is much lower. It is only one sixth compared to polystyrene and a third when compared to glass fibre.

# PRODUCT PORTFOLIO

## AIRTIGHT SYSTEMS

Under the brand names AIRSTOP and OMEGA roof sheeting, wind seals, vapour barriers and adhesive systems are developed and distributed.

Air tightness and wind tightness are decisive factors in functioning thermal insulation.

## ISOwindow for window installation

ISOCELL has developed the product line ISOWINDOW for installers of windows and façade construction experts. Window sealing systems according to NORM are offered under this brand name. For example, window tapes to plaster and tape over which can be used in wooden construction as well as solid structures. The tapes, manufactured on our own premises, can be supplied in any width required and if requested come with acrylic and/or butyl adhesive strips on one or both sides. The product range is complemented by patented T-Fal sealing profiles for which ISOCELL has the exclusive distribution rights.

## Adhesive tapes and sealants

The increasing demands for window shells that are sealed even better in the low and passive energy house sector call for complex solutions. We provide special products such as sealing tapes for sealing in the threshold area, or sleeves for penetrations points of pipes and cables. In the production of adhesive tapes we use pure acrylic adhesives without resins added and which are guaranteed 30 years for resistance to ageing.

## MACHINE TECHNOLOGY

Since the year 2000 ISOCELL has been developing blow-in technology together with Engl Maschinenbau GmbH, a company also located in Neumarkt, and also services the machines. In addition to our own products we also carry out maintenance work on all machines of other manufacturers. As of 1st January 2010 ISOCELL and Engl took over equal shares in the 'Rampf Automation' company in Neumarkt, a subsidiary of the German Rampf group.

Besides cellulose insulation and airtight products, ISOCELL has also been involved in the construction, service and distribution of blowing machines. Innovative machine technology for the processing of cellulose insulation on site and in pre-fabrication in wooden element construction is developed and distributed by ISOCELL under the brand name ISOBLOW.

**Development of technology for blown insulation, maintenance of all our own models and those of other manufacturers**
