Plant Sale catalogue

“Focus on Planters and Patios”

Sunday, April 24, 2016

10 a.m. to 4 p.m.

\$2

Welcome to VanDusen Botanical Gardens' 38th Annual Plant Sale.

This catalogue will guide you through the thousands of wonderful plants that we have available for your purchase. We are proud to present the largest plant sale in the lower mainland. All the plants have been carefully selected for you by our many knowledgeable plant sale volunteers and gardening experts.

In recognition of the increasing number of people who are gardening in smaller spaces and containers, we are featuring plants suitable for planters, pots and patios. We want to help gardeners explore this whole new world of inspiring and endless design featuring stunning colours, style and impact.

Heartfelt thanks to the over 400 volunteers who work long, hard hours and contribute their vast collective gardening knowledge to make this plant sale such a success and therefore an important financial contribution to VanDusen Botanical Garden.

Thank you for your support!

Margaret Lord, Plant Sale Chair 2016

FUCHSIAS

Fuchsias come in thousands of varieties, and can be grown as trailing annuals in baskets or planters, or as hardy plants directly into the garden. Fuchsias bloom from early summer to early autumn.

Although fuchsias are not fragrant, hummingbirds are attracted to nectar from the colourful flowers.

Growing requirements:

Morning sun, dappled or partial shade all day. Grow in moist soil, high in organic matter.

Feed with a quick-release water-soluble fertilizer every two weeks.

Hardy fuchsias:

Fuchsia magellanica, F. magellanica 'Aurea', F. 'Riccatoni', F. 'Genii', F. 'Gracilis'

Variegated leaf varieties:

Fuchsia magellanica 'Tricolor'; F. 'Golden Marinka' (yellow leaf); F. 'Autumnell'; F. 'Island Sunset'

Semi-hardy:

Fuchsia 'Otto' - Large, exuberant double flowers with very flared red sepals and purple corollas. Attractive to bees, butterflies and humming birds

Fuchsia 'Winston Churchill' - Flowers are double, with short, reflexed, pink sepals and tube, and bluish-lavender petals

Hardy fuchsias grow back late each spring. Pot up trailers and uprights into planters and baskets. Pinch back new growth tips until the end of June; this will promote new growth and more flower buds to form. To make a basket we recommend using up to eight, 2 ½" plants in a twelve inch basket. Planting the same variety in one basket makes a much nicer show.

We have added the following varieties available for 2016:

Fuchsia 'Dancing Flame' - Winner of the RHS Award of Garden Merit

Fuchsia (Diva Series) 'Midnight', 'Rose and Purple', 'White and Lilac'

Fuchsia 'Garden Meister' - Red tubular-shaped, honeysuckle fuchsia blossoms

Fuchsia 'Marinka' - Scarlet sepals and deep red petals, on this free flowering trailing fuchsia

Fuchsia 'Lottie Hobby' (aka 'Mini False Creek') - Bushy, upright, vigorous plant has very small serrated leaves and small, single flowers with dark pink sepals and tube, and deep pink petals

Fuchsia 'Pink Marshmallow' - Extra large double flowers, with long pale pink tube

Fuchsia x hybrida 'Sunbeam Ernie' - Compact fuchsia, heat tolerant, perfect for small pot

Fuchsia x hybrida 'Sunbeam Samba' - Very early-blooming, upright fuchsia

Fuchsia 'Voodoo' - Long blooming, dangling flowers in shades of intense red and purple have a delicate, silky appearance

Fuchsia 'Windchimes' - Pure white flowers shine against the green foliage

BEGONIAS

Fibrous begonias are annual plants. These brightly colored begonias are equally at home in full sun or shade, in containers or garden beds.

Angel Wing begonia is named for the shape of its leaves. With its attractive year round foliage, you can grow an Angel Wing begonia indoors as a houseplant, in bright, indirect light. These cane-type begonias are some of the world's best performing and easiest begonias to grow. They have interesting leaves and magnificent displays of pendant and drooping flowers.

Nonstop begonias can be planted in a flowerbed, hanging basket or patio container, in any well-drained soil.

Solenia begonias - These hiemalis-type begonias have been a popular semi-shade basket plant for years.

The new Solenia series are faster growing, mildew resistant and take full sun, and are a cross between a tuberous begonia and a wax begonia. They are 'self cleaning' and require no deadheading.

ORCHIDS AND EXOTICS

The orchids available at the sale are outstanding indoor plants, with attractive blooms; some types last for several months at a time. Orchids are far tougher and hardier than most people think, and are mostly extremely adaptable. All orchid plants at the sale come with detailed culture sheets, to provide information on how to nurture them.

Here are some examples of the types of orchids that are expected to be available at the sale:

- ***Phalaenopsis*** (moth orchid) – this is the most popular type of orchid because the blooms last for so long. There will be a big selection, perfect gifts for birthdays, Mother's Day or any special occasion. They feature flat, glossy, spreading leaves supporting arching spikes of white, pink, purple, yellow, or spotted/striped blooms.
- ***Oncidium*** – a variety of intergenerics; blooms with spikes of fancifully patterned flowers in shades of white, yellow, red and brown.
- ***Cattleya*** – several types of plants could be available, depending on what is 'in spike' at the time of the sale; large, showy flowers with a variety of colours.
- ***Dendrobium*** – a variety of plants could be available, depending on what is 'in spike' at the time of the sale; bloom in sprays with delicate florets that are 1 inch to 2 inches across, in an array of colors including purple, pink, fuchsia, white, yellow, green and bicolors.

There will be a large selection of fascinating carnivorous plants, some being hardy outdoor types. Here are some available varieties:

- ***Sarracenia*** – this is a large and varied family of North American Pitcher Plants. These incredible plants display a multitude of foliage colours.
- and are winter hardy in the Pacific Northwest. They also eat bugs.
- ***Dionaea*** – Venus Fly Traps are the only 'active' carnivorous plants.
- ***Drosera*** – Sundews are sticky plants, great for trapping fruit flies and fungus gnats in your house or greenhouse.
- ***Pinguicula*** – Attractive plants with colourful, violet-like flowers.

GERANIUMS (PELARGONIUMS)

Most of our plants this year are zonal geraniums, named for the dark, horse-shoe-shaped markings on the leaves.

Don't over-water geraniums as they prefer to be a little on the dry side. Geraniums are suitable for planting in the garden or in containers. They do well with some shade and bloom all summer and into the fall, until the first frost.

Zonal geranium colours are red, pink, salmon and white

Trailing or ivy geraniums - varied colours, for hanging baskets and containers

Scented geraniums – grown for leaf fragrance more than for flowers

Lemon-scented geranium, ever popular

Peppermint-scented geranium, all time favourite

'Pink Champagne' scented geranium. Dark green, leathery leaves with a citrusy scent. New this year

'Prince George', orange-scented geranium

Volunteering at VanDusen

We endeavour to provide our members with a variety of opportunities to build new skills, make friends and help the Garden grow. We have volunteer opportunities for all interests. Please join us at an upcoming volunteer orientation to find out more.

Opportunities include: Education, Guides, Master Gardeners, School Program Leaders, Summer Nature Program Leader, Teaching Assistants, Clerical Activities, Office Assistance, Garden Activities, Dried Flower Arrangers, Garden Guerillas, Garden Shop, Labellers, Library, Seed Collectors, Public Relations, Community Ambassadors, Customer Services, Membership, Visitor Services, Special Events, Compost Sale, Festival of Lights, Manure Sale and, of course, the Plant Sale.

PACIFIC NORTHWEST NATIVE PLANTS

Gardening with PNW Native Plants

- Plan according to the habitat conditions in which the plants naturally grow: sun exposure, slope (shedding or receiving water), soil moisture, soil nitrogen and soil texture - organic (add compost) to mineral (add sand and gravel)
- Plan for the mature size of the plant. Native plants are best when they can grow to a natural height and width without excessive pruning.
- Plant in descending layers. Many of our native plants are from forest habitats with multiple layers of trees that shade shrubs, perennials and ferns.
- Place plants together from the same habitats. They have evolved forms, leaf shapes and specific relationships to grow together successfully.
- Many perennials are spring-flowering when there is natural soil moisture available, and some go dormant in the summer.
- Plants in dry habitats usually prefer well-drained, low nitrogen soil; plants in very moist habitats usually prefer high nitrogen soil.
- Climate and habitats are changing; where possible use plants that prefer drier soils and that can survive dry summer conditions with watering restrictions.

POT LUCK

The Pot Luck section has many favourite, old-fashioned plants and some more unusual offerings. Plants have been collected from gardens of members and friends of VanDusen Botanical Garden Association, some come from VanDusen Garden, and some are donated by local nurseries. We are not always sure of the colour or exact botanical identity – hence the name Pot Luck. You will find a great selection of perennials, trees and shrubs. We have plants for all seasons – astilbes, geraniums, hostas, irises, grasses, ferns, hellebores, hemerocallis, rodgersia, peonies, primulas and sedums, to name a few. For your deck or patio we have baskets of perennials selected for specific areas (shade or sun), and pots of succulents for that sunny spot.

The Pot Luck group pots up donations throughout the year. If you would like to donate some of your plants for next year's sale, please call Jean McComb at 604.261.4556, or Margie Knox at 604.261.1868.
