For over 40 years, our windows have been custom crafted to add beauty, security, comfort and energy efficiency to your home.

Professional engineering, attention to detail, reliability, expert craftsmanship, exceptional service and choice have made us one of the leading window brands in North America, but that doesn't mean we're content to stand still. We are always innovating and investing in technology, research and development and our skilled and talented people, so you receive outstanding windows that stand up to the harshest weather.

# 1 WINDOW TYPES

SELECT CASEMENT EXTERIOR

SUPREME EXTERIOR

SUPREME INTERIOR

## CASEMENT

Our best performing windows against snow, wind and rain.

Designed to keep harsh weather out, our casement windows are energy efficient, reliable and practical. They open out to a full 90 degrees via dual or single-arm crank operators and are hinged at the side, making them a great choice for the main and upper levels of your home.

---

AVAILABLE IN THE FOLLOWING FAMILIES:  
Supreme | Select

SUPREME EXTERIOR

SUPREME INTERIOR

# AWNING

An outstanding choice when air circulation and ease of use are paramount.

Our awning windows are hinged at the side and swing out from the bottom, providing excellent ventilation even during light rain. They're easy to use

and built to withstand harsh weather. Pair awning windows with larger fixed windows on the main and upper floors of your home to enjoy both the view and air flow.

Casement and Awning windows look and perform the same.

---

**AVAILABLE IN THE FOLLOWING FAMILIES:**  
Supreme | Select

## 1 WINDOW TYPES

# SINGLE HUNG

Our single hung windows are easy to clean and take up no additional space when open.

The bottom sash slides up to open, stays in place, and tilts in for quick and easy cleaning. Since our single hung windows do not open outward, they're a great choice for rooms that face decks, porches and walkways. Enjoy reduced energy costs with our improved version of this classic window design.

**AVAILABLE IN THE FOLLOWING FAMILIES:**  
Supreme | Select

SELECT EXTERIOR

SELECT INTERIOR

# DOUBLE HUNG

Choose our double hung windows when ease of cleaning and air flow are your top priorities.

The top and bottom sashes slide up and down and stay in position, providing increased air flow into your home. Both sashes also tilt in for quick and easy cleaning of the entire window. And because our double hung windows do not open outward, they're an excellent choice for rooms that face decks, porches and walkways.

# SINGLE & DOUBLE GLIDER

Our glider windows are easy to use and easy to clean.

One sash slides side to side in our single glider, while our double glider allows both sashes to operate independently and easily for increased ventilation. Both options have sashes that tilt in and lift out of the frame for easy cleaning. Glider windows are often found in basements, but are an outstanding choice for any room in your home.

Supreme (Single & Double Glider)

Select (Single Glider only)

## TILT & TURN

Our innovative tilt & turn windows offer unmatched versatility.

Enjoy the best features of casement, fixed and tilting designs with our elegant and simple tilt & turn windows. They tilt inward from the top for draft-free ventilation even during rain or, with a simple turn of the handle, open inward just like a door for maximum ventilation and easy cleaning. When closed, our tilt & turn windows appear just as elegant as our fixed windows. With a multi-point locking mechanism, they provide the best performance and are a fantastic choice for any room in the main and upper levels of your home.

FRENCH TILT & TURN

\*Available in a Hopper orientation.

## 1 WINDOW TYPES

# FIXED/PICTURE (NON-OPERATING)

Add visual appeal to your home and let in more natural light with our fixed windows.

Fixed windows do not open or operate in any way. Instead, they can dramatically improve the appearance of any room in your home, especially when paired with larger, functional windows or installed around doors. Fixed windows also allow you to explore unique shapes and sizes, providing nearly unlimited possibilities. Available with or without sash.

### AVAILABLE IN THE FOLLOWING FAMILIES:

Right side: narrow profile picture window*

INTERIOR

*Left side: narrow profile picture window  
Right side: fixed sash picture window*

# 2 WINDOW PERFORMANCE

We're constantly investing in new technologies, materials and techniques to provide you with the highest performing windows on the market – windows that reduce your energy costs, keep out the weather and make your home more comfortable.

STYLE PERFORMANCE ↑

- Tilt & Turn
- Casement
- Awning
- Single Hung
- Double Hung
- Single Glider
- Double Glider

There are two main considerations when determining the performance of your windows: weather performance and energy performance.

### WEATHER PERFORMANCE

The elevation, exposure and terrain surrounding your home all impact the weather performance requirements of your windows. These requirements also vary with the climate and location of your home.

We've built our own test lab in our manufacturing facility to ensure your windows meet or exceed the requirements in your location. Look for the North American Fenestration Standard (NAFS) label on your windows for details on how they meet or surpass your requirements.

Talk to your local, authorized Kohltech dealer to ensure your windows meet and exceed weather performance standards.

### ENERGY PERFORMANCE

All our windows are designed with energy performance in mind. Choosing Kohltech windows is an investment in the energy efficiency of your home, as most of our products meet or exceed the more stringent requirements of the ENERGY STAR® program.

Our windows incorporate a number of additional features that increase their energy performance:

### INSULATED GLASS UNIT

Made up of two or three glass panes separated by chambers of air or an inert gas (argon or krypton). This results in decreased heat transfer compared to single-pane units.

### LOW EMISSIVITY (LOE) COATING

A thin, virtually invisible metallic layer, applied to the glass, that reflects heat back to the same side it originated from. This increases your home's ability to retain heat.

### WARM EDGE SPACER SYSTEM

Raises the temperature of glass near the frame, decreasing heat loss. Also functions to remove any moisture between the panes of glass. We offer three types of warm edge spacers: Intercept® Tin-Plated Steel, Intercept® Ultra Stainless Steel, and Cellular Silicone.

## 2 WINDOW PERFORMANCE

# HIGH PERFORMANCE GLASS

We offer a wide variety of high performance glass options that will help increase your home's energy efficiency:

### LOE ARGON

Saves on energy. Increased energy performance by combining a LoE coating, argon gas and an intercept warm edge spacer.

### ENERGLAS®

The standard in glass performance. Our most popular option dramatically reduces heat loss and infiltration of harmful UV rays. It uses a high performance ultra warm edge spacer, one panel of LoE coated glass and one cavity filled with argon gas.

### TRIPLE ENERGLAS PLUS®

The ultimate in high performance and energy efficiency. Our ultra high performance, energy efficient, triple glazed option uses warm edge cellular silicone spacers, two panels of LoE coated glass and two cavities filled with argon or krypton gas.

### HIGH SOLAR GAIN (HSG) GLASS

HSG glass excels at allowing heat from the sun in, helping to heat homes in colder climates and reduce energy costs. HSG is our default LoE.

### LOW SOLAR GAIN (LSG) GLASS

For hot summers and cold winters. If you get a lot of sun in the summer, consider using LSG glass. It significantly reduces heat transfer, preventing overheating in the summer and providing insulation in the winter for year-round comfort.

## PASSIVE HOUSE CERTIFIED WINDOWS

Kohltech Windows & Entrance Systems is one of very few manufacturers in North America to achieve PHIUS certification. Selecting products with this designation provides numerous benefits to your home. The triple glazing technology insulates your home far more effectively than regular windows. Because the insulation is so effective, passive solar heat gains in combination with the heat generated by home appliances and people can often provide most of the necessary heating.

Consistent and comfortable temperatures are maintained all year round since the windows and doors minimize heat loss and maximize heat gain in the winter. Increased insulation and consistent temperatures mean lower energy bill throughout the year, including those cold winters.

Acquiring Passive House certification is a rigorous process and only products of the highest performance levels can achieve this standard. Door options also available.

## SPECIAL GLASS OPTIONS

Take your windows to the next level with these additional glass options.

### TEMPERED

Tempered glass is a safe alternative to regular glass. The glass undergoes a heat treatment to increase its strength and improve its safety.

### SOUND-REDUCING LAMINATED

A type of safety glass that reduces outdoor noise by up to 50%. The glass is held together by an interlayer to improve its safety.

### ARCHITECTURAL GLASS

We offer a wide variety of glass options to fit projects of any size and makeup. Unique offerings include specialty privacy glass, float glass, solar control glass and safety glass.
