Introduction

Congratulations on purchasing the T3260 Wireless 11ac Bonded VDSL2 Modem Gateway. The Gateway is a single platform device that supports universal WAN access, FTTN, FTTP, FTTB, or FTTP. With support for advanced 802.11ac 4x4 WiFi, the Gateway enables blazing fast HD video streaming, with multi-channel HD video throughput. The Gateway also offers an unprecedented level of security, helping protect your network resources. It has also been designed to deliver unparalleled WiFi performance, using dual-band WiFi supporting speeds up to 2.3 Gbps.

Package Contents

- Black Power adapter
- Yellow cable (Ethernet, 6 ft.)
- White cable (Ethernet, 10 ft.)
- Quick Start Guide
- Installation Guide
- Wall-mount template
- Vertical stand

Minimum System Requirements

- Active ADSL2+ service
- Computer with an 10 Mbps or 10/100/1000 Mbps Ethernet connection
- Microsoft Windows 10, 8, 7; Mac OS OS X+
- TCP/IP network protocol installed on each computer

Features

- ADSL2+, VDSL2, G.fast, WAN Ethernet and Fiber in a single CPE
- Dual Band WiFi delivering up to 2.3 Gbps with 802.11ac 4x4 5GHz and 802.11n 3x3 2.4GHz
- Optimized for IPTV and Video over WiFi

Getting to Know the Gateway

This section contains a quick description of the Gateway's lights, ports, and other features. The Gateway has several indicator lights (LEDs) and a button on its front panel, and a series of ports and switches on its rear panel.

Front Panel

The front panel of the Gateway features 12 LEDs, and a WPS (Wireless Protected Setup) button.

Power

The Power LED brights green when the unit is powered up.

DSL 1

The DSL 1 LED brights green when the DSL 1 is synchronized.

DSL 2

The DSL 2 LED brights green when the DSL 2 is synchronized.

Internet

The Internet LED illuminates green when the Gateway is properly connected to a WAN Internet connection. WAN/LAN This LED brights green when there is an active Ethernet cable connected to the WAN port, and it blinks with traffic activity.

Ethernet 1

This LED brights green when there is an active Ethernet cable connected to the LAN port #1, and it blinks with traffic activity.

Ethernet 2

This LED brights green when there is an active Ethernet cable connected to the LAN port #2, and it blinks with traffic activity.

Ethernet 3

This LED brights green when there is an active Ethernet cable connected to the LAN port #3, and it blinks with traffic activity.

Ethernet 4

This LED brights green when there is an active Ethernet cable connected to the LAN port #4, and it blinks with traffic activity.

Windstream T3260 Gateway

USB

This LED brights green when there is an active device connected to the USB port.

Wi-Fi 2.4G

This LED brights green when the Gateway's radio is operating in the 2.4GHz band.

Wi-Fi 5G

This LED brights green when the Gateway's radio is operating in the 5GHz band.

WPS Button

The WPS button is used when connecting a wireless device to the Gateway's wireless network using WPS.

Rear Panel

The rear panel of the Gateway features 8 ports, and a Reset button.

Power Port

The Power port is used to connect the Power cord (Model No. CDS036-W120U, made by Actiontec) to the Gateway.

Reset Button

Depressing the Reset button for 10 seconds will restore the Gateway's factory default settings. The reset process will start after releasing the button.

Introduction

WARNING! Do not unplug the Power cord from the Gateway during the reset process. Doing so may result in permanent damage to the Gateway.

WAN Ethernet Port

The WAN Ethernet port is used to connect the Gateway to a WAN connection via an Ethernet cable.

LAN Ethernet Ports (4)

The LAN Ethernet ports are used to connect computers to the Gateway via Ethernet cable. The Ethernet ports are 10/100/1000 Mbps auto-sensing ports, and either a straight-through or crossover Ethernet cable can be used when connecting to the ports.

USB Port

The USB port is used to connect the Gateway to a USB device.

DSL Port

The DSL port is used to connect the Gateway to a DSL wall outlet via DSL cable.

Windstream T3260 Gateway

Connecting the Gateway

There are many variables involved when connecting the Gateway, depending on the type of Internet service available. The figure below shows the possible connections available for the Gateway.

Connecting a Computer to the Gateway

To connect a computer to the Gateway to access the Gateway's graphical user interface (GUI):

1. Get the Gateway and black Power cord from the box.
2. Plug the black Power cord in the black port on the back of the Gateway and then into a power outlet.
3. Plug the yellow Ethernet cable from the box into one of the four yellow Ethernet ports on the back of the Gateway.
4. Make sure the computer is powered on, then plug the other end of the yellow Ethernet cable into an Ethernet port on the computer.
5. Make sure that the LED on the LAN port into which the Ethernet cable is plugged glows steadily green. This may take a few moments.
6. The computer should either be configured with a statically defined IP address and DNS address, or instructed to automatically obtain an IP address using the Network DHCP server. The Gateway is set up, by default, with an active

Introduction

DHCP server, and it is recommended to leave this setting as is.

Accessing the Home Screen

2

This chapter gives a short overview of the Home screen of the Gateway's graphical user interface (GUI).

Accessing the Home Screen

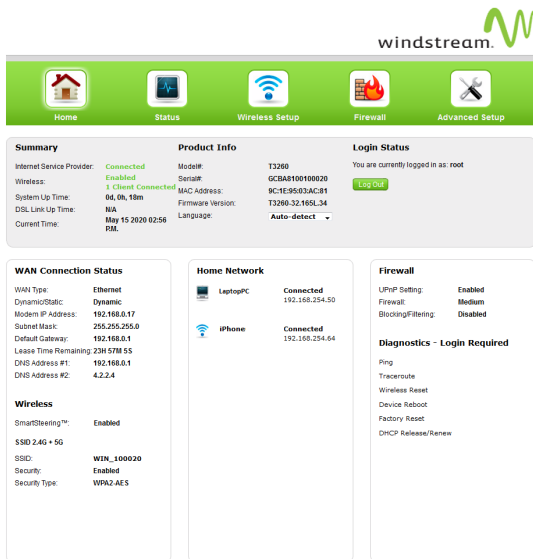

To access the Home screen:

1. Open a Web browser on computer connected, via Ethernet cable, to one of the Gateway's LAN ports. In the *Address* text box, type:
<http://192.168.254.254>
then press **Enter** on the keyboard.

Windstream T3260 Gateway

2. The Gateway's Home screen appears.

The Gateway's GUI is now accessible.

Icon Bar

At the top of the Home screen is the Icon Bar. Here, you can quickly access the other four main sections of the Gateway's GUI by clicking on the appropriate icon: Status (see chapter 3 for more details); Wireless Setup (see chapter 4 for more details); Firewall (see chapter 5 for more details); Advanced Setup (see chapter 6 for more details). Clicking **Home** in any other screen generates the Home screen.

Connection Status

The bottom of the Home screen consists of connection and device information relating to the Gateway. There are no configurable options here.

Summary	Product Info	Login Status
Internet Service Provider: Connected Wireless: Enabled System Up Time: 0d, 0h, 18m DSL Link Up Time: N/A Current Time: May 15 2020 02:56 PM	Model#: T3260 Serial#: GCBAB100100020 MAC Address: 9C:1E:95:03:AC:81 Firmware Version: T3260-32.165L_34 Language: Auto-detect	You are currently logged in as: root Log Out

Checking the Gateway's Status

3

This chapter explains the options available on the Status screens, which display information about the Gateway's network connections.

Accessing the Status Screens

To access the Gateway's Status screens:

1. Open a Web browser. In the *Address* text box, type:

<http://192.168.254.254>

then press **Enter** on the keyboard.

2. The Gateway's Main screen appears. Click the *Status* icon.

- The *Connection Status* screen appears. “Connection Status” is under the “Internet Service” group.

Internet Services

- ▶ **Connection Status**
- ▶ Line 1 Status

Connection Status

Parameter	Status
Broadband:	Connected
Internet Service Provider (ISP):	Connected
Firmware Version:	WST3K-31.164L.05
Model Number:	T3200
Serial Number:	GTBA6190500086
WAN MAC Address:	70:f1:96:07:2c:b1
Downstream Rate:	N/A
Upstream Rate:	N/A
ISP Protocol:	1483 via DHCP
Encapsulation:	N/A
Modem IP Address:	192.168.1.85 Release/Renew
Lease Time Remaining:	23H 56M 57S
DNS Address #1:	192.168.1.254
DNS Address #2:	N/A
IPv6 Prefix of Delegated:	N/A
IPv6 WAN Status:	Connecting
IPv6 WAN Address:	N/A
IPv6 WAN Link Local Address:	fe80::72f1:96ff:fe07:2cb1
IPv6 LAN Link Local Address:	fe80::72f1:96ff:fe07:2cb0
IPv6 Unique Local Address:	N/A
IPv6 DNS Address 1:	N/A
IPv6 DNS Address 2:	N/A

From here, all the Status screens can be accessed from the menu on the left.

Connection Status

Clicking **Connection Status** from any Status screen generates the *Connection Status* (see figure, above). Information concerning the devices connected to the Gateway’s network, whether wired or wireless, is displayed here, along with the connected device’s IP address, MAC address, and (if applicable) IPv6 address.

Checking the Gateway's Status

Line 1/Line 2 Status

Click **Line 1 Status** from any Status screen to generate the *Line 1 Status* screen. This screen displays the Gateway's DSL connection parameters for *DSL Line 1* port. Clicking **Line 2 Status** generates the *Line 2 Status* screen, which displays the connection parameters for the Gateway's *DSL Line 2* port.

Line 1 Status	
Connection	Status
Actiontec Broadband:	Disconnected
Internet Service Provider:	Disconnected

Checking the Gateway's Status

Firewall Status

Click **Firewall Status** from any Status screen to generate the *Firewall Status* screen. This screen displays parameters concerning the Gateway's firewall.

Firewall Status		
The list below displays all firewall settings modified from the factory default settings.		
Firewall Feature	LAN IP	Applied Rule
Applications	N/A	Default Feature Setting
Port Forwarding	N/A	Default Feature Setting
DMZ Hosting	N/A	Default Feature Setting
Firewall Settings	N/A	Firewall Set to Medium
NAT	N/A	NAT Enabled
UPnP	N/A	No UPnP Rules Defined

NAT Table

Click **NAT Table** from any Status screen to generate the *NAT Table* screen. This screen displays the Gateway's WAN (wide area network) parameters.

NAT Table					
Protocol	Timeout	Source IP	Source Port	Destination IP	Destination Port
8	25	192.168.254.04	49321	210.58.194.162	443
8	12	192.168.254.04	49911	210.58.194.206	443

Configuring Wireless Settings

4

This chapter explains the options provided in the *Wireless Settings* section of the Gateway's firmware, including basic and advanced settings, and WPS.

Accessing Wireless Settings

To access the Wireless Settings screens:

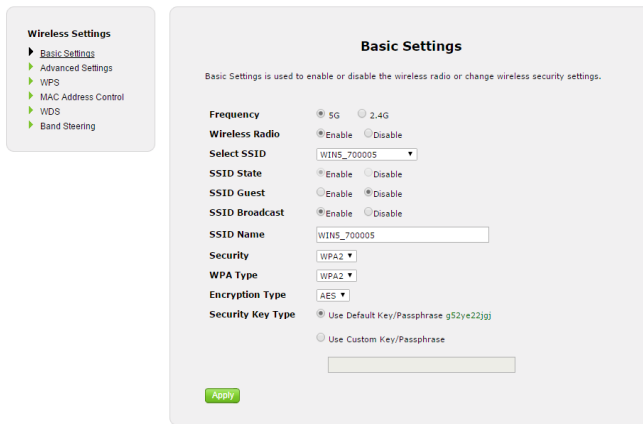

1. Open a Web browser. In the *Address* text box, type:
<http://192.168.254.254>
then press **Enter** on the keyboard.

- The Gateway's Main screen appears. Enter the user name and password, then click **Wireless Settings** from the row of icons at the top of the screen.

- The *Basic Settings* screen appears, with a menu of other wireless options listed on the left side of the screen.

Basic Settings

Click **Basic Settings** from any Wireless Settings screen to generate the *Basic Settings* screen, as shown in the figure above. This screen displays a series of settings relating to the basic functionality of the Gateway's wireless network, including SSID (network name), frequency, and security.

Changing the Wireless Network Name (SSID)

To change the name of the Gateway's wireless network, enter the new name in the *SSID Name* text box in the *Basic Settings* screen, then click **Apply**.

Configuring Wireless Settings

Changing the Wireless Key/Passphrase

To change the passphrase for the Gateway's wireless SSID, at the Security Key Type, press the button for Use Custom Key/Passphrase, enter the desired Wireless Key/Passphrase in the text box, then click Apply.

Enabling SSID Guest Option

Enabling this option in the *Basic Settings* screen allows guest users to access the Gateway's wireless Internet connection, while preventing these users from accessing other wireless devices, including network printers or other unsecured network devices. To enable, click in the *Enable* button next to *SSID Guest*, then click **Apply**.

Advanced Settings

Click **Advanced Settings** from any Wireless Settings screen to generate the *Advanced Settings* screen. This screen displays a series of settings relating to the advanced capabilities of the Gateway's wireless network, including compatibility mode, channel width, and WMM power save.

Advanced Settings

The modem supports high-speed wireless devices using the 802.11b/g/n protocol. Enable and tune 802.11b/g/n parameters as appropriate.

Frequency 5G 2.4G

Compatibility Mode 5GHz (A,N,AC) ▼

Channel Width 80 MHz ▼

Control Channel None ▼

MSDU Aggregation MSDU Aggregation Disabled ▼

MPDU Aggregation MPDU Aggregation Enabled ▼

WMM Enable Disable

WMM Power Save Enable Disable

Channel Auto Detect ▼ Re-scan Current Channel: 132

Scheduled Optimization Enable Disable

Wireless Power Level 100% ▼

Apply

WPS

Click **WPS** from any Wireless Settings screen to generate the *WPS (Wi-Fi Protected Setup)* screen, which allows the user to configure WPS by following the onscreen instructions.

WPS (Wi-Fi Protected Setup)

WPS provides an easy and secure way to establish a wireless network by sharing the wireless key between the modem and wireless client.

Frequency: 5G 2.4G

Select SSID

1. Set the WPS state.

WPS: Enable Disable

2. Click Apply to save changes.

Configuring Wireless Settings

WDS

Click **WDS** from any Wireless Settings screen to generate the *WDS Wireless Distribution System* screen, which allows the user to configure the Gateway to allow wireless interconnection of access points via a wireless connection. Follow the onscreen instructions to configure.

WDS Wireless Distribution System

WDS allows the wireless interconnection of access points via a wireless connection.

Frequency: 5G 2.4G

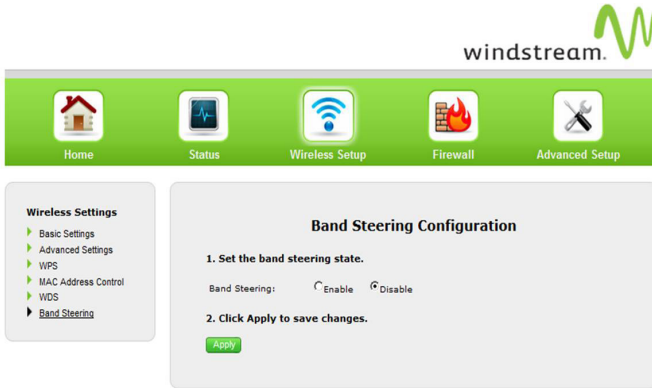

1. Set the WDS main base station state.

WDS Main Base Station: Enable Disable

2. Click Apply to save your changes.

Band Steering

Click **Band Steering** from any Wireless Settings screen to generate the *Band Steering Configuration* screen, which allows the user to configure the Gateway to automatically connect 2.4GHz and 5GHz wireless devices to the appropriate wireless network bandwidth. Also, this screen can be used to assign a certain wireless network and/or bandwidth to a particular wireless device. Follow the onscreen instructions to configure.

Configuring Firewall Settings

5

This chapter explains the options provided in the *Firewall* section of the Gateway's firmware, including setting up port forwarding and static NAT.

Accessing Firewall Settings

To access the Firewall screens:

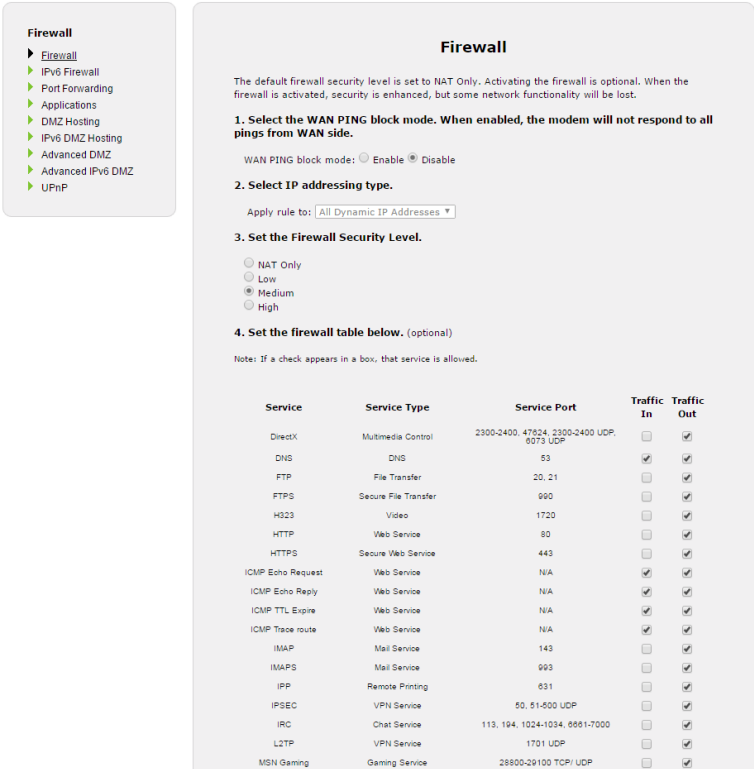

1. Open a Web browser. In the *Address* text box, type:
<http://192.168.254.254>
then press **Enter** on the keyboard.

The Gateway's Home screen appears. Click the *Firewall* icon.

- The *Firewall* screen appears, with a menu of other wireless options listed on the left side of the screen.

Firewall

Click **General** from any Firewall Settings screen to generate the *Firewall* screen, as shown in the figure above. To configure basic settings of the Gateway's firewall, follow the onscreen instructions.

Configuring Firewall Settings

IPv6 Firewall

Click **IPv6 Firewall** from any Firewall Settings screen to generate the *IPv6 Firewall* screen. To set up, follow the onscreen instructions.

IPv6 Firewall

Activating the firewall is optional. When the firewall is activated, security is enhanced, but some network functionality may be lost.

1. Select the stealth mode state. When stealth mode is enabled, the modem will not respond to unsolicited WAN traffic, including pings..

Stealth Mode: Enable Disable

2. Select the IP address or IP addressing type to which the firewall rules will apply.

Addressing Type:

3. Set the Firewall Security Level.

Security Level:

[CreateRule](#)

4. Set the firewall table, below. Services checked are allowed. (optional)

Service	Service Type	Service Port	Traffic In	Traffic Out
DirectX	Multimedia Control	2300 through 2400, 47924, 2300 through 2400 UDP, 6073 UDP	<input type="checkbox"/>	<input checked="" type="checkbox"/>
DNS	DNS	53	<input type="checkbox"/>	<input checked="" type="checkbox"/>
FTP	File Transfer	20, 21	<input type="checkbox"/>	<input checked="" type="checkbox"/>
FTPS	Secure File Transfer	990	<input type="checkbox"/>	<input checked="" type="checkbox"/>
H323	Video	1720	<input type="checkbox"/>	<input checked="" type="checkbox"/>
HTTP	Web Service	80	<input type="checkbox"/>	<input checked="" type="checkbox"/>
HTTPS	Secure Web Service	443	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ICMP Echo Request	Web Service	N/A	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ICMP Echo Reply	Web Service	N/A	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Port Forwarding

Click **Port Forwarding** from any Firewall screen to generate the *Port Forwarding* screen. Activating port forwarding allows the network to be exposed to the Internet in certain limited and controlled ways, enabling some applications to work from the local network (game, voice, and chat applications, for example), as well as allowing Internet access to servers in the local network. This screen allows you to configure the port forwarding settings of the Gateway. If changes are made in this screen, click **Apply** at the bottom of the screen to save them.

Port Forwarding

Enter ports or port ranges required to forward Internet applications to a LAN device below.

1. Set the LAN/WAN port and IP information.

Select LAN Device: Manually enter the IP address ▾

LAN IP Address:

External (WAN) Start Port:

External (WAN) End Port:

Internal (LAN) Start Port:

Internal (LAN) End Port:

Protocol: TCP ▾

2. Click Apply to save changes.

Apply

Applied Port Forwarding Rules

LAN START/ END PORT	PROTOCOL	LAN IP ADDRESS	WAN START/END PORT	MODIFY	REMOVE
No Entries Defined					

Port forwarding settings should only be adjusted by experienced technical users who are extremely familiar with networking concepts.

Configuring Firewall Settings

Applications

Click **Applications** from any Firewall screen to generate the *Applications* screen. This screen allows the user to designate certain applications to be forwarded, circumventing the usual firewall security settings. If changes are made in this screen, click **Apply** at the bottom of the screen to save them.

Applications

Applications forwards ports to the selected LAN device by application name.

1. Select Device.

Select Device: Enter IP Address:

2. Select the application category, then the application to forward.

Application Category:
Applications:

3. Click Apply to save changes.

Forwarded Applications List:

DEVICE NAME	IP ADDRESS	APPLICATION FORWARDED	EDIT
No Entries Defined			

DMZ Hosting

Click **DMZ Hosting** from any Firewall screen to generate the *DMZ Hosting* screen. The DMZ host feature allows one device on the network to operate outside the firewall to use an Internet service that otherwise would be blocked, or to expose a networked device to all services without restriction or security. To activate, click in the *Enable* radio button, then enter the device's IP address in the appropriate text boxes.

DMZ Hosting

DMZ hosting enables a LAN device to use the modem's WAN IP address as its own. DMZ places the LAN device outside the firewall.

WARNING! Using a device in DMZ mode creates a security risk by exposing the device to outside intrusion.

1. Set the DMZ state.

DMZ: Enable Disable

2. Select a device.

Select Device: Enter IP Address:

3. DMZ Timer.

DMZ timer:

4. Click Apply to save changes.

DMZ Hosted Device

DEVICE NAME	IP ADDRESS	DMZ Timer	EDIT
No Entries Defined			

Caution! A DMZ host is not protected by the firewall and may be vulnerable to attack. Designating a DMZ host may also put other computers in the local network at risk. When designating a DMZ host, consider the security implications and protect it if necessary.

IPv6 DMZ Hosting

Click **IPv6 DMZ Hosting** from any Firewall screen to generate the *IPv6 DMZ Hosting* screen. The DMZ host feature allows one device on the network to operate outside the firewall to use an Internet service that otherwise would be blocked, or to expose a networked device to all services without restriction or security. To activate, follow the onscreen instructions.

IPv6 DMZ Hosting

DMZ hosting enables a LAN device to use the modem's WAN IP address as its own. DMZ places the LAN device outside the firewall.

WARNING! Using a device in DMZ mode creates a security risk by exposing the device to outside intrusion.

1. Enter an IPv6 Address.

Enter The last 64 bits of IPv6 Address:

2. Click Apply to save changes.

IPv6 DMZ Hosted Device	
IP ADDRESS	EDIT
No Entries Defined	

Caution! A DMZ host is not protected by the firewall and may be vulnerable to attack. Designating a DMZ host may also put other computers in the local network at risk. When designating a DMZ host, consider the security implications and protect it if necessary.

UPnP

Click **UPnP** from any Firewall screen to generate the *UPnP* screen, which activates UPnP (Universal Plug and Play). To activate, set the preferred UPnP options, then click **Apply**.

UPnP

Follow the steps below to enable or disable UPnP (Universal Plug and Play).

1. Set the UPnP state.

UPnP:	<input checked="" type="radio"/> Enable	<input type="radio"/> Disable
UPnP Log:	<input type="radio"/> Enable	<input checked="" type="radio"/> Disable
UPnP Mode:	<input type="radio"/> Read only	<input checked="" type="radio"/> Read write

2. Click Apply to save changes.

Advanced Settings

6

This chapter explains the options available with the Advanced Setup screens, which configure some of the more complex settings on the Gateway.

Accessing the Advanced Setup Screens

To access the Gateway's Advanced Setup screens:

1. Open a Web browser. In the Address text box, type:
<http://192.168.254.254>
then press Enter on the keyboard.

2. The Gateway's Main screen appears. Click the Advanced Setup icon.

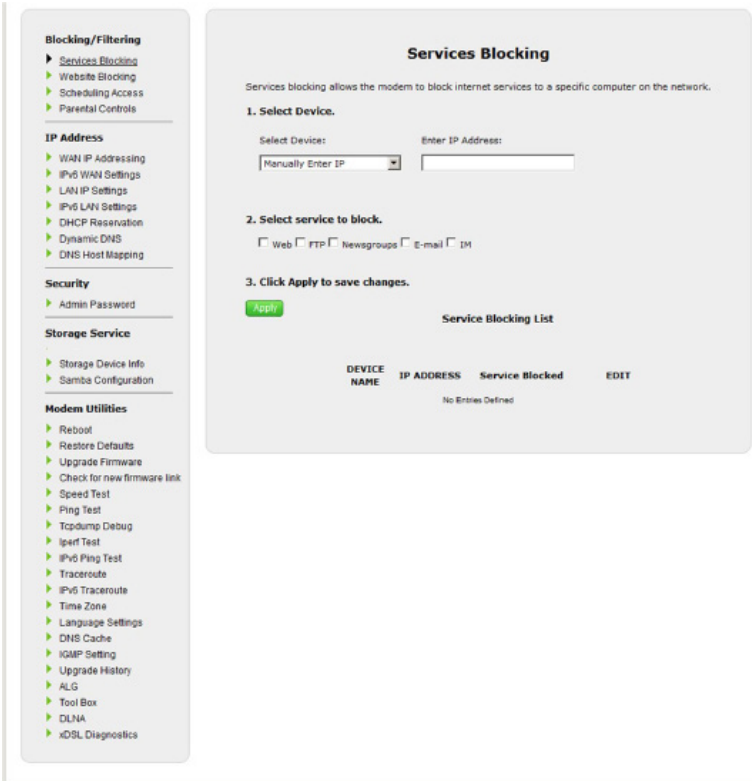

Windstream T3260 Gateway

3. A WARNING screen appears. Technicians can click PROCEED to configure the Advanced Settings of the gateway.

4. The Services Blocking screen appears.

Advanced Settings

From here, all the Advanced Setup screens can be accessed from the menu on the left.

Services Blocking

Click Services Blocking from any Advanced Setup screen to generate the Services Blocking screen (see the figure, above). This feature allows the user to block certain services from accessing the Gateway's network(s). Follow the onscreen instructions to configure.

Website Blocking

Click Website Blocking from any Advanced Setup screen to generate the Website Blocking screen. This feature allows the user to block certain websites from accessing the Gateway's network(s). Follow the onscreen instructions to configure.

Website Blocking

Website Blocking

1. To block a specific website, enter the website address (such as www.abcd.com) in the text box below.

Website Address:

2. Click **Apply** to save changes.

Blocked Websites

Website Blocked	EDIT
No Entries Defined	

Scheduling Access

Click Scheduling Access from any Advanced Setup screen to generate the Scheduling Access screen. This feature allows the user to schedule access to the Gateway's network(s) for certain devices. Follow the onscreen instructions to configure.

Scheduling Access

Schedule Rules allows the modem to set a specific time period during which a computer on the network can access the Internet.

1. Select Device.

Select Device: Manually enter the MAC Address ▼ Enter MAC Address:

2. Select the days of the week to allow Internet access.

A checked box signifies access allowed.

SUN MON TUE WED THU FRI SAT

3. Select the time of day range from the drop-down list.

From: 12:00 PM ▼ To: 12:00 PM ▼

4. Click Add to create device schedule.

Add

Device Access Restriction List

Device Name	MAC Address	Allowed Days	Allowed Time	Edit

Advanced Settings

Parental Controls

Click Parental Controls from any Advanced Setup screen to generate the Parental Controls Configuration screen. This feature allows the user to allow or prevent access to certain websites for devices on the Gateway's network. Follow the onscreen instructions to configure.

Parental Controls Configuration

Your T3200 Residential Gateway allows you to control the access to the Internet for all the devices in your home in three easy steps:

Controls for minors:

1. Tag some devices as CHILD.
2. Create time restrictions for all CHILD devices.
3. Create webpage restrictions for all CHILD devices.

Controls for adults:

Devices not tagged as CHILD are considered PARENT and not subject to those controls.

Controls per device:

1. Select a target device.
2. Create time restrictions for that particular device.
3. Create webpage restrictions for that particular device.

The controls per device take priority over the CHILD controls.

Update Tag Disable

Client Device	MAC Address	Control Tag	Internet Access Controls	Parental Controls
<input type="text" value="XPStudio-PC"/>	00:24:e8:82:99:6c	<input type="radio"/> CHILD <input checked="" type="radio"/> PARENT	Set Device Rule	Set Childs Rule

WAN IP Addressing

Click WAN IP Addressing from any Advanced Setup screen to generate the WAN IP Address screen. This feature allows the user to set the protocol used by the ISP for Internet access. Follow the onscreen instructions to configure.

WAN IP Address

WAN IP Addressing sets the protocol used by your ISP for Internet access.

- 1. Current WAN interface is WAN Ethernet.**
- 2. Select the ISP protocol below.**
 - PPPoE
 - RFC 1483 via DHCP
 - RFC 1483 via Static IP
- 3. If your ISP Provider requires Host Name/Domain Name, enter it here.**

Host Name	<input type="text" value="home"/>
Domain Name	<input type="text" value="Home"/>
- 4. Select the DNS type.**
 - Dynamic DNS Addresses (Default)
 - Static DNS Addresses

Primary DNS:	<input type="text" value="Not Applicable"/>
Secondary DNS:	<input type="text" value="Not Applicable"/>
- 5. Configure IGMP Proxy.**
 - Enable
 - Disable
- 7. Enter the VLAN parameters.**

VLAN ID:	<input type="text" value="-1"/>	(-1 -- 4094)
VLAN Priority:	<input type="text" value="0"/>	(0 -- 7)
- 6. Click Apply to save changes.**

Advanced Settings

IPv6 WAN Settings

Click IPv6 WAN Settings from any Advanced Setup screen to generate the IPv6 WAN Settings screen. This feature allows the user to set the IPv6 protocol used by the ISP for Internet access. Follow the onscreen instructions to configure.

WARNING: This setting should be configured by experienced network technicians only, since any changes could affect the Gateway's IPv6 service.

IPv6 WAN Settings

IPv6 is the next generation of IP addressing.

1. Set the IPv6 state.

IPv6: Enable Disable

2. Select the WAN IPv6 connection protocol.

WAN IPv6 IP Protocol:

3. Set the WAN IPv6 Addressing Type.

Request PD Only: Yes No

4. Set the WAN IPv6 DNS Server.

IPv6 DNS Type: Default Servers Custom Servers

5. Click Apply to save changes.

How to Set the T3200 to RFC1483 Transparent Bridge

From the WAN IP Address screen, select RFC 1483 Transparent Bridging and click Apply. The gateway will allow the WAN IP address to pass-through to the device connected to LAN Port 1 Only.

Ping Test

Click Ping Test from any Advanced Setup screen to generate the Ping Test screen. To perform a ping test on the Gateway, follow the onscreen instructions.

Ping Test

Test your Internet connectivity to a specific host using the ping test, below.

1. Insert a URL or IP address below.

URL or IP:

2. Select the packet size.

Packet Size (Bytes):

3. Select test.

Test Status
No Test in Progress

Ping Test Results:

REPLY FROM	BYTES	TIME	TTL
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A

Ping Statistics:

PACKETS SENT	PACKETS RECEIVED	PACKETS LOSS	ROUND TRIP MIN	ROUND TRIP MAX	ROUND TRIP AVG

Advanced Settings

Tcpdump Debug

Click Tcpdump Debug from any Advanced Setup screen to generate the Tcpdump Debug screen. This screen allows the user to copy the packet capture file to a USB flash drive connected to the Gateway, along with the CFE and wireless configuration files, for debugging purposes. Follow the onscreen instructions to complete.

Tcpdump Debug

TCPDump will copy the packet capture (pcap) file to the USB flash connected to the modem. Also, the CFE and wireless configuration files will be copied to the USB flash.

- 1. Select the interface to debug.**
TCPDump Interface:
- 2. Select the packet size to dump.**
Packet Size:
- 3. Select the filename of dump file stored in the USB Flash.**
File Name:
- 4. Select the duration of Dump.**
TCPDump Timeout(Seconds):

Iperf Test

Click Iperf Test from any Advanced Setup screen to generate the Iperf Test screen. To perform an iperf test on the Gateway, follow the onscreen instructions.

Iperf Test

Test your network situation for interface, below.

1. Select iperf Mode.

Client ▾

2. Select port to listen or connect to.

port:

3. Select Report interval.

report interval: Seconds

4. Select protocol.

Protocol: ▾

window size: Bytes

5. Select transmit options.

Transmit Bytes Bytes

Transmit Time Seconds

6. Host.

URL or IP:

7. Select test.

Advanced Settings

IPv6 Ping Test

Click IPv6 Ping Test from any Advanced Setup screen to generate the IPv6 PingTest screen. To perform an IPv6 ping test on the Gateway, follow the onscreen instructions.

IPv6 Ping Test

Test the Modem's Internet connectivity to a specific host using the Ping Test, below.

1. Insert a URL or IP address below.

URL or IP:

2. Select the interface.

Interface Name:

3. Select the packet size.

Packet size (bytes):

4. Select test.

Ping test results

Reply From	Bytes	Time	TTL
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A

Ping Statistics

Packets Sent	Packets Received	Packet Loss	Round Trip Minimum	Round Trip Maximum	Round Trip Average
N/A	N/A	N/A	N/A	N/A	N/A

Traceroute

Click Traceroute from any Advanced Setup screen to generate the Traceroute screen. To perform an route trace on the Gateway, follow the onscreen instructions.

Traceroute

Traceroute is used to determine the route taken by packets across a network.

1. Insert a URL or IP Address below.

URL or IP:

2. Select test.

Test Status
No Test in Progress

Traceroute Results:

Hop	Time 1	Time 2	Time 3	Host / IP Address
N/A	N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A	N/A

Advanced Settings

IPv6 Traceroute

Click IPv6 Traceroute from any Advanced Setup screen to generate the IPv6 Traceroute screen. To perform an IPv6 route trace on the Gateway, follow the onscreen instructions.

IPv6 Traceroute

Traceroute is used to determine the route taken by packets across a network.

1. Enter a URL or IP address in the text box, below.

URL or IP:

2. Select test.

Traceroute Results

Hop	Time 1	Time 2	Time 3	Host / IP Address
N/A	N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A	N/A
N/A	N/A	N/A	N/A	N/A

Time Zone

Click Time Zone from any Advanced Setup screen to generate the Time Zone screen. Use this screen to set the time zone on the Gateway.

Time Zone

1. Please select your Time Zone (Current Time: September 12 07:07 P.M.)

(GMT - 8:00)	Pacific Time	<input type="radio"/>
(GMT - 7:00)	Mountain Time	<input type="radio"/>
(GMT - 6:00)	Central Time	<input type="radio"/>
(GMT - 5:00)	Eastern Time	<input checked="" type="radio"/>

Day Light Saving

2. Click Apply to save changes.

Language Settings

Click Language Settings from any Advanced Setup screen to generate the Language Settings screen. Use this screen to set the language on the Gateway's graphical user interface.

Language Settings

1. Select your preferred language

Auto-detect

2. Click Apply to save changes.

Advanced Settings

DNS Cache

Click DNS Cache from any Advanced Setup screen to generate the DNS Cache screen. Use this screen to set up a DNS cache on the Gateway.

DNS Cache

The modem provides DNS Caching ability. In most cases, DNS Caching allows a DNS Server to respond more quickly to multiple queries for the same domain or host.

Note: Although DNS Caching can resolve an Internet request more quickly, it also poses risks, such as DNS Poisoning.

1. Select Disable or Enable DNS Cache.

Disable (Recommended)

Enable

2. Click Apply to save changes.

IGMP Setting

Click IGMP Setting from any Advanced Setup screen to generate the IGMP Configuration screen. Use this screen to set up IGMP processes on the Gateway.

Advanced Settings

Upgrade History

Click Upgrade History from any Advanced Setup screen to generate the Upgrade History screen. This screen displays a list of firmware upgrades applied to the Gateway.

Upgrade History				
Provides upgrade history data for the modem.				
Upgrade History				
Date	Time	Type	Status	Firmware Version
No Upgrade Entries				

ALG

Click ALG from any Advanced Setup screen to generate the Firewall - ALG / Pass-Through screen. This screen allows the user to configure ALG settings on the Gateway.

Firewall - ALG / Pass-Through	
FTP:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
H323:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
TFTP:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
IRC:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
PPTP:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
RTSP:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
SIP:	<input type="radio"/> Enable <input checked="" type="radio"/> Disable
<input type="button" value="Apply"/>	

Tool Box

Click Tool Box from any Advanced Setup screen to generate the Tool Box screen. This screen allows the user to configure traffic and port mirroring on the Gateway.

Tool Box

Tool Box provides troubleshooting tools for the modem. Do not enable the Tool Box features unless you are a qualified network technician.

1. Set the traffic type to mirror.
Traffic Type:
2. Select the port to be mirrored.
Traffic Type:
3. Click Apply to save changes.

DLNA

Click DLNA from any Advanced Setup screen to generate the DLNA screen. This screen allows the user to configure DLNA settings on the Gateway.

DLNA

1. Set the DLNA Server state.
DLNA: Enable Disable
Media Library Path:
2. Click Apply to save changes.

xDSL Diagnostics

Click xDSL diagnostics from any Advanced Setup screen to generate the xDSL Diagnostics screen. This screen allows the user to select a type of diagnostics on the Gateway.

Print Server

Click Print Server from any Advanced Setup screen to generate the Print Server screen. This screen allows the user to select and configure a print server for the Gateway's network.

Print Server

1. Set the Print Server state.

Print Server: Enable Disable

Printer name:

Make and model:

2. Click Apply to save changes.

Specifications

General

Model Number(s)

T3260 (Wireless 11ac Bonded VDSL2 Modem Gateway)

Standards

IEEE 802.3 (10BaseT)
IEEE 802.3u (100BaseTX)
IEEE 802.11 b, g, n, ac (Wireless)
G.dmt
G.lite
t1.413
RFC 1483, 2364, 2516

Protocol

LAN - CSMA/CD
WAN - PPP, DHCP, Static IP

WAN

VDSL2 interface

LAN

10/100/1000 RJ-45 switched ports

Speed

LAN Ethernet: 10/100/1000 Mbps auto-sensing
Wireless: 802.11a, b, g, n, ac; 900 Mbps optimal (see Wireless Operating Range for details)

Cabling Type

Ethernet 10BaseT: UTP/STP Category 3 or 5

Ethernet100BaseTX: UTP/STP Category 5

Wireless Operating Range

Indoors

Up to 91M (300 ft.) @ 300 Mbps

Outdoors

Up to 457M (1500 ft.) @ 300 Mbps

Topology

Star (Ethernet)

LED Indicators

WAN, Wireless, and WPS Push Button

Power Adapter

Model No. - CDS036-W120U

Input - 100-240V~, 50/60Hz, 1.0A

Output - 12.0V === 3.0A

Manufacturer - Actiontec

Environmental

Power

External, 12V DC, 3A

Certifications

FCC Part 15 Class B, Class C and E, FCC Part 68, UL

Operating Temperature

0° C to 45° C (32°F to 113°F)

Storage Temperature

-20°C to 70°C (-4°F to 158°F)

Operating Humidity

10% to 85% non-condensing

Storage Humidity

5% to 90% non-condensing

Notices

Warranty

This product has a one-year Limited Hardware Warranty and 90-day free software updates from date of purchase.

Local Law

This Limited Warranty Statement gives the customer specific legal rights. The customer may also have other rights, which vary from state to state in the United States, and from country to country elsewhere in the world.

To the extent that this Limited Warranty Statement is inconsistent with local law, this Statement shall be deemed modified to be consistent with such local law. Under such local law, certain disclaimers and limitations of this Warranty Statement may not apply to the customer.

Go to <http://www.actiontec.com/products/warranty.php> for more information.

Important Safety Instructions

Basic safety precautions should always be followed to reduce the risk of fire, electrical shock, and personal injury, including the following:

- Do not use this product near water – for example, near a bathtub, kitchen sink, laundry tub, or swimming pool, or in a wet basement; only clean with dry cloth.
- Do not block any ventilation openings. Install in accordance with the manufacturer's instructions. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus including amplifiers that produce heat.
- Do not use the telephone to report a gas leak in the vicinity of the leak.
- Use only the power cord indicated in this manual.

Coaxial Cable

If applicable, the coaxial cable screen shield needs to be connected to the Earth at the building entrance per ANSI/NFPA 70, the National Electrical Code (NEC), in particular Section 820.93, “Grounding of Outer Conductive Shield of a Coaxial Cable,” or in accordance with local regulation.

FCC Class B Equipment

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by implementing one or more of the following measures:

- Reorient or relocate the device;
- Increase the separation between the equipment and receiver;
- Consult the dealer or an experienced radio or television technician for help.

Modifications

The FCC requires the user to be notified that any changes or modifications made to this device that are not expressly approved by Actiontec Electronics, Inc, may void the user’s authority to operate the equipment.

Declaration of Conformity for Products Marked With the FCC Logo

This device complies with part 15 of the FCC. Operation is subject to the following two conditions:

1. This device may not cause harmful interference;
2. This device must accept any interference received, including interference that may cause undesired operation of the device.

Important Note on Wi-Fi

If applicable, this equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

The radio has been found to be compliant to the requirements set forth in CFR 47 Sections 2.1091, 15.247 (b) (4), 15.407 addressing RF Exposure from radio frequency devices as defined in Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields. The equipment should be installed more than 30 cm (~12 in.) from your body or nearby persons.

For product available in the USA market, only channel 1~11 can be operated. Selection of other channels is not possible.

The device could automatically discontinue transmission in case of absence of information to transmit, or operational failure. Note that this is not intended to prohibit transmission of control or signaling information or the use of repetitive codes where required by the technology.

The device for the band 5150-5250 MHz is only for indoor usage to reduce potential for harmful interference to co-channel mobile satellite systems.

The maximum antenna gain permitted for devices in the band 5725-5825 MHz shall comply with the e.i.r.p. limits specified for point-to-point and non point-to-point operation as appropriate.

The transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
