## **Welcome to Recurring Invoicing**

## Introduction

Congratulations on your purchase of Xtreme Accounting from Stark Software. This additional Manual has been written to enable you to be able to get the full benefit of this Module without a significant learning curve.

We have attempted to make the tedious yet necessary process of recurring billing simple to set up and generate periodic invoices effortlessly

#### **Overview of the Module Features**

The main features of this module are :

- 1. Create an invoice template per customer and utlise these details to generate recurring invoices when required
  - a. Invoice line items can link back to General Ledger codes or Inventory Item Codes
  - b. Unlimited number of lines per customer
  - c. Remarks line available. This is a non-financial remarks line that will enable you to include additional details pertaining to an invoice line. Examples of this would be Unit Numbers in a Body Corporate Company, serial numbers for rented equipment etc
- 2. Control the time period over which the individual line item is to be run. The system will allow you to enter a start and end date for each line item.
- 3. Offer the ability to add a once-off line item.
- 4. Offer the ability to be able to not invoice a line item despite it being part of the normal recurring invoice.
- 5. Print a pre-run report to verify that the data for recurring invoices to be generated are correct.
- 6. Print and/or email the generated invoices automatically.

#### **Setting Up the Recurring Invoice**

#### Accessing the Recurring Invoice Options

All the functionality associated with this module can be found under the Customers ... Processing Button.

There are 3 tabs available :

- 1. Recurring Invoice
- 2. Print Recurring Invoice Batch
- 3. Process Recurring Invoice Batch

In addition, under Customer Maintenance, there is a shortcut directly to the Recurring Invoice Batch option.

Capture the first recurring Invoice Line.

Type - This field details the invoice line type. The possible values are :

G = G/L Code - A G/L Code will be used for the invoice line

I = Item Code – An Inventory Item Code will be used for the invoice line

R = Remarks – This is not an actual invoice line, but a Remarks line that can be used to add further detail to the preceding invoice line.

**Code** – The code that must be entered will be determined by the Type value entered above. Clicking on the icon will generate a list of all applicable Codes. Click on the Code you require. Alternatively, if you know the Code, you may enter it directly without going via the search list option.

**Quantity** – The value entered here is the number of units. The default quantity is 1. Any amount in the range -9999 to 999999 can be entered.

**Description** – This describes the invoice line entry. If the "G" Type is used, the G/L Code Description will be automatically entered in this field. If the "I" Type is used, the Inventory Description will be automatically entered in this field. Using the "R" Type leaves this field blank and the field becomes the "Remarks" field. The Description can be amended by you as required.

**Tax** – The Tax Type applicable to this Invoice line is entered here. The default Tax Type for this customer will be selected as the default. You can change the Tax Type by clicking on the entry field. This will bring up a list of all the valid Tax Types loaded. Choose the required Tax Type.

**Disc %** - The discount percentage applicable to this line of the invoice can be entered. The system defaults to 0.

**Each** – The price of the item is entered here. The maximum amount that can be entered for each line of the invoice is 9,999,999.99.

**Amount** – This value is calculated by multiplying the Quantity value by the Each value. This amount is entered by the system and cannot be altered by a user.

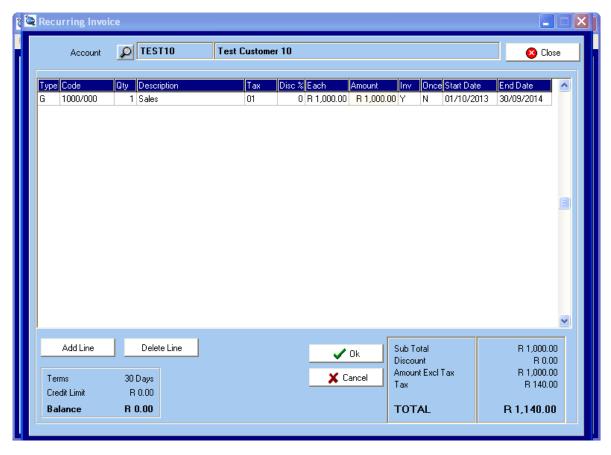

**Inv** – This field determines whether the line item is to be invoiced when the recurring invoices are generated. Changing the value from Y to N will result in the line item not being included in the invoice.

**Once** – This field indicates that the line item is to be invoiced once only. Provided that the **Inv** field is filled with a "Y", the line will be included in the invoice, for 1 run only. Once the recurring invoice has been generated, the system will automatically change the **Inv** field to "N" to prevent this line for inadvertently being included in future runs. However, should you wish to include this line in a future run, all you would need to do, is change the **Inv** field back to "Y" again.

**Start Date** – This field stores the starting date of the date range that will determine the time period in which the recurring invoice is valid. A recurring invoice run date that falls before the start date will mean that the line will not be included in that run.

**End Date** - This field stores the end date of the date range that will determine the time period in which the recurring invoice is valid. A recurring invoice run date that falls after this date will mean that the line will not be included in that run.

The use of the start and end dates will enable you to accurately control when each line of the invoice should be included, and when it should be excluded.

To capture additional lines, click the Add Line Button and enter the details as you did for the first line.

To Delete a line, click on or select the line to be deleted and click the Delete Line button.

## **Printing the Pre-Run Report**

Prior to generating your recurring batches, it would be prudent to view or print this report before generating the invoices.

To access this report, click on the Print Recurring Invoice Batch button.

💐 Print Recurring Invoices
Invoice period 10 - 01/12/2013 - 31/12/2013 - December -
Invoice Date 01/12/2013 💌
Print Report (Ignore Dates)
Period in which Start or End Date must fall inbetween
11 - 01/01/2014 - 31/01/2014 - January
Print Invoice Batch S Close

**Invoice Period** - The current period (current period for debtor processing) that you are working in will be selected. You can change the period for the invoice report being generated.

**Invoice Date** – The date which will appear on the generated invoices. This date must be valid for the Invoice Period selected.

**Print Report (Ignore Dates)** – The report will normally filter out the lines whose start and end dates fall outside the required range for this report. By ticking this box, the system will ignore those start and end dates, and print out every line. If this box is ticked, the report totals may not be the amount that would be invoiced.

**Period in which Start or End Data must fall inbetween** – These dates are determined by the Period definitions for the company. Select the Period you require and the dates associated with that Period will be used to determine if a line is included in an invoice or not. This period selected need not be the same as the **Invoice Period** selected.

Click the Print Invoice Batch button to generate the PDF report which can then also be printed.

Click the Close button to return to the Menu.

**Invoice Period** - The current period that you are working in will be selected. You can change the period for the invoices to be generated.

**Invoice Date** – The date which will appear on the generated invoices. This date must be valid for the Invoice Period selected.

**Period in which Start or End Data must fall inbetween** – These dates are determined by the Period definitions for the company. Select the Period you require and the dates associated with that Period will be used to determine if a line is included in an invoice or not. This period selected need not be the same as the **Invoice Period** selected.

Invoice Message - The invoice-specific message that will be printed on the current invoice only.

#### **Emailing/Printing**

Depending on the Document Processing settings for each customer, the system will automatically print and/or email the generated invoices.

These settings can be changed in Customer Maintenance as follows :

Customers ... Customer Maintenance ... View/Edit/Delete ...Document Processing ... Document Printing

Subject - The subject that will appear on the email to the customer

**Body** – The contents of the body of the email to be sent to the customer. The name of the person who will receive the email can be specified in the "Name of person emails will be addressed to" field under Customer Maintenance as follows : Customers ... Customer Maintenance ... View/Edit/Delete ...Document Processing

**Printer** – The system allows you to select the printer you want to use to print the hardcopy invoices.

To generate the recurring invoices, click on the Process Invoicing button.

Recurring Invoice Processing Completed

If there were any invoices created for customers that had the Document Processing set to email, the system will prompt you to start sending of these invoice emails.

All queued and unsent emails will be displayed.

**Number of emails to be sent** – This feature allows the software to limit the number of emails that will be sent per the specified number of minutes.

**Per Minutes** – This sets the interval to be used.

The reason for these setting are that most ISP's have a limit as to the number of emails that can be sent in an hour. If your ISP's limit is 200, we suggest you set the limits as follows :

#### Number of emails to be sent : 50 per 15 minutes

**BCC your email address (send a copy to yourself** – If this box is ticked, every email sent to the email address loaded for the user generating the recurring invoices. The email address can be stored or changed under User Maintenance as follows :

Admin ... User Maintenance ... Access Control ... Email Settings Refer to the Detailed User Manual for instructions to set up these email account settings. Other Options - Clicking this button will bring up 2 further options :

**Delete Selected Entries** – Highlight the email you want to delete. Clicking on this option, will bring up the prompt to confirm that you want to delete the selected email. Clicking Yes will detele the highlighted email.

Delete All Emails – All emails in the queue will be deleted.
